King, Zawawi Ibrahim, Noor Hasharina Hassan, 2016-08-12 This edited book is the first major review of what has been achieved in Borneo Studies to date Chapters in this book situate research on Borneo within the general disciplinary fields of the social sciences with the weight of attention devoted to anthropological research and related fields such as development studies gender studies environmental studies social policy studies and cultural studies Some of the chapters in this book are extended versions of presentations at the Borneo Research

Council's international conference hosted by Universiti Brunei Darussalam in June 2012 and a Borneo Studies workshop organised in Brunei in 2012. The volume examines some of the major debates and controversies in Borneo Studies including those which have served to connect post-war research on Borneo to wider scholarship. It also assesses some of the more recent contributions and interests of locally based researchers in universities and other institutions in Borneo itself. The major strength of the book is the inclusion of a substantial amount of research undertaken by scholars working and teaching within the Southeast Asian region. In particular, there is an examination of research materials published in the vernacular, notably the outpouring of work published in Indonesian by the Institut Dayakologi in Pontianak. In doing so, the book also addresses the urgent matters which have not received the attention they deserve, specifically subjects, themes and issues that have already been covered but require further contemplation, elaboration and research, and the scope for disciplinary and multidisciplinary collaboration in Borneo Studies. The book is a valuable resource and reference work for students and researchers interested in social science scholarship on Borneo and for those with wider interests in Indonesia and Malaysia and in the Southeast Asian region.

The Politics of Transition in Central Asia and the Caucasus Amanda E. Wooden, Christoph H. Stefes, 2009-06-08. Most books on the Caucasus and Central Asia are country-by-country studies. This book, on the other hand, fills a gap in Central Eurasian studies as one of the few comparative case study books on Central Eurasia covering both the Caucasus and Central Asia. It considers key themes right across the two regions, highlighting both political change and continuity. Comparative case study chapters written by regional experts from a variety of methodological backgrounds provide historical context and evaluate Soviet political legacies and emerging policy outcomes. Key topics include the varied types and sources of authoritarianism, political opposition and protest, politics, predetermined outcomes of post-Soviet economic choices, social and stability impacts of natural resource wealth variations, educational reform, international norm influence on gender policy and the power of human rights activists. Overall, the book provides a thorough up-to-date overview of what is increasingly becoming a significant area of concern.

The Grants Register 1997 Ruth Austin, 2016-01-06. In response to changing market needs, The Grants Register has been substantially revised from previous editions for this its 15th edition. With increased student and professional mobility world-wide coverage in The Grants Register has been extended from the English-speaking world to the whole world, making it the only truly international guide of its kind. The number of awards has increased by 25% from the last edition, with all the information supplied directly by the awarding body. To improve ease of use, the layout and field structure has also been completely updated. This has included the introduction of new fields on the level of study, individual eligibility and applications procedures, as well as additional contact details such as email and World Wide Web addresses. The indexes have also been completely revised with the introduction of an internationally recognised subject index which simultaneously incorporates a geographical guide to eligibility. An alphabetical list of awards will also be given. Now significantly extended, The Grants Register continues to be the only

complete guide to awards and grants for postgraduates young professionals mature students and advanced scholars

Integrating Knowledge Through Interdisciplinary Research Dominic Holland, 2013-08-22 In this important new text Holland seeks to explain by means of social scientific and philosophical inquiry the difficulties that researchers often experience when attempting to integrate knowledge from different academic disciplines either individually or as part of a team of subject specialists It is argued that the difficulty of integrating knowledge from different academic disciplines is the result of firstly an inadequate justification of the nature of scientific integration and differentiation and secondly the dominance of disciplinary specialization in scientific inquiry By focusing on both the theoretical justification for and the practical feasibility of integrating knowledge through interdisciplinary research this book asks what properties of reality make the integration of knowledge from different academic disciplines possible and to what extent it is feasible to integrate knowledge through interdisciplinary research within a traditional disciplinary context Accordingly the text is both philosophical and social scientific in content philosophical in the sense that it presents a theory of causal determination which will help researchers to understand how reality is both differentiated and interconnected social scientific in the sense that it presents the results of three case studies of collaborative interdisciplinary research projects The book is heavily informed by the philosophy of critical realism The philosophical argument about the possibility of integration and specialization in science draws explicitly on some of the key concepts of critical realism particularly those comprising the theory of integrative pluralism while critical realist assumptions underpin the social scientific argument about the causal influence of the social system of knowledge production By exploring researchers conceptions of knowledge and of reality on the one hand and their decisions about what sort of knowledge to produce on the other Holland shows how the difficulty of scientific integration is both a problem of knowledge and a problem of knowledge production This book is essential reading for students and academics interested in the emerging topic of knowledge integration and interdisciplinarity **The**

Politics of Knowledge in Central Asia Sarah Amsler, 2007-04-24 Through careful historical and ethnographic research and extensive use of local scholarly works this book provides a persuasive and careful analysis of the production of knowledge in Central Asia The author demonstrates that classical theories of science and society are inadequate for understanding the science project in Central Asia Instead a critical understanding of local science is more appropriate In the region the professional and political ethos of Marxism Leninism was incorporated into the logic of science on the periphery of the Soviet empire This book reveals that science organizes and constructed by Soviet rule was also defined by individual efforts of local scientists Their work to establish themselves between Marx and the market is therefore creating new political economies of knowledge at the edge of the scientific world system *Political Research* Sandr Halperin, 2025 [The Grants Register](#) 2000 NA NA, 1999-05-28 The most authoritative and comprehensive guide available to postgraduate grants and professional funding worldwide For over twenty years The Grants Register has been the leading source for up to date information on the

Model Cases

Monika Krause, 2021-09-03 In Model Cases Monika Krause asks about the concrete material research objects behind shared conversations about classes of objects periods and regions in the social sciences and humanities It is well known that biologists focus on particular organisms such as mice fruit flies or particular viruses when they study general questions about life development and disease Krause shows that scholars in the social sciences and humanities also draw on some cases more than others selecting research objects influenced by a range of ideological but also mundane factors such as convenience historicist ideas about development over time schemas in the general population and schemas particular to specific scholarly communities Some research objects are studied repeatedly and shape our understanding of more general ideas in disproportionate ways The French Revolution has profoundly influenced our concepts of revolution of citizenship and of political modernity just like studies of doctors have set the agenda for research on the professions Based on an extensive analysis of the role of model cases in different fields Krause argues that they can be useful for scholarly communities if they are acknowledged and reflected as particular objects she also highlights the importance of research strategies based on neglected research objects and neglected combinations of research objects and scholarly concerns
