Learning and Knowledge for the Network Society David V. Gibson, Manuel V. Heitor, Alejandro Ibarra Yunez, 2005 This title discusses technology policy and management in a context much influenced by a dynamic of change and a necessary balance between the creation and diffusion of knowledge It is largely grounded on empirical experiences of different regional and national contexts

Information Society Karamjit S. Gill, 2012-12-06 Human centredness A Challenge to Post industrial Europe The key power in industrial society has been linked to the possession of capital and factory In the information society it could be rather different If one accepts that that the key power in the information society will be linked not so much to the ownership of information but to human creativity nourished by that information the productive force of today and tomorrow could be more and more the human brain Making use of one's intelligence is always accompanied by positive emotion which in turn further activates the intelligence But unfortunately under present conditions workers of all levels live in fear anxiety and stress rather than desire and motivation The question of basic human ecology quality of life is therefore a major strategic factor It is precisely the opposite to the mechanisms of exclusion that currently dominate our society exclusion of young people through joblessness but also exclusion through technology as with the helplessness of older people or the poorly educated confronted with ticket dispensing machines or other automats This is not idle theorizing it corresponds to concrete facts It is for example how some observers interpret the crisis at IBM Because its programs were less human friendly it was shaken to its foundations by Apple and Microsoft though it seems since to have learnt its lesson

Technology and the American Economy United States. National Commission on Technology, Automation, and Economic Progress, 1966

Risk Society Professor Ulrich Beck, 1992-07-01 This panoramic analysis of the condition of Western societies has been hailed as a classic This first English edition has taken its place as a core text of contemporary sociology alongside earlier typifications of society as postindustrial and current debates about the social dimensions of the postmodern Underpinning the analysis is the notion of the risk society The changing nature of society's relation to production and distribution is related to the environmental impact as a totalizing globalizing economy based on scientific and technical knowledge becomes more central to social organization and social conflict

The Credential Society Randall Collins, 2019-05-28 The Credential Society is a classic on the role of higher education in American society and an essential text for understanding the reproduction of inequality Controversial at the time Randall Collins's claim that the expansion of American education has not increased social mobility but rather created a cycle of credential inflation has proven remarkably prescient Collins shows how credential inflation stymies mass education's promises of upward mobility An unacknowledged spiral of the rising production of credentials and job requirements was brought about by the expansion of high school and then undergraduate education with consequences including grade inflation rising educational costs and misleading job promises dangled by for-profit schools Collins examines medicine law and engineering to show the ways in which credentialing closed these high status professions to new arrivals In an era marked by the devaluation of high school diplomas outcry about the value of expensive undergraduate degrees and the proliferation of new professional degrees like the MBA The Credential Society has more than stood the test of time In a new preface Collins discusses recent developments debunks claims that credentialization is driven by technological change and points to alternative pathways for the future of education

Industrial Society Leon Carroll Marshall, 1929

Theories of Industrial Society (RLE Social Theory) Richard Badham, 2014-08-21 The concept of industrial society plays a dominant role in the social sciences The Great Divide between pre industrial and industrial societies is commonly assumed to be the main bridge separating modern societies from the past and distinguishing developed from undeveloped states in the present era In history economics politics and sociology the concept of industrial society underlies a wide variety of discussions particularly those relating to economic development and social progress Outside academic writing too the concept exerts a great deal of influence In the developing world there is a widespread concern to industrialise whilst in the developed world there is growing uneasiness as to whether industrialisation is beneficial or not but still the concept is central This book examines critically the concept of industrial society its pervasiveness and influence It reviews all the major theories of industrial society and the research into the changing character of post industrial societies It argues that the decision to use the concept severely restricts the social imagination and that the concept becomes increasingly less useful as criticism of the equating of industrialisation with social progress grows
