Linguistics Across Historical and Geographical Boundaries Dieter Kastovsky, A. J. Szwedek, Barbara Płoczińska, 1986 *Language and Context* Helen Leckie-Tarry, 1995-01-01 *Language and Context* breaks new ground in our understanding of the relationship between register genre and context Leckie Tarry argues convincingly and engagingly for a functional theory of language which specifies register in terms of contextual and linguistic features and which suggests a discursive relationship between the two Moving beyond the limits of much of today's theory this accessible volume develops a theoretical understanding of the relationship between text context language function and linguistic form Helen Leckie Tarry a specialist in the area of register and applied linguistics died in 1991 aged 49 Although she had finished a large part of this work her notes and draft chapters have been extensively edited by Professor David Birch David Birch is currently Professor of Communication and media Studies at Central Queensland University Australia and previously taught at Murdoch University Western Australia and the National University of Singapore Language, Identity,

and Marginality in Indonesia Joel C. Kuipers,1998-09-10 Indonesia's policy since independence has been to foster the national language In some regions local languages are still political rallying points but their significance has diminished and the rapid spread of Indonesian as the national language of political and religious authority has been described as the miracle of the developing world Among the Weyewa on the island of Sumba this shift has displaced a once vibrant tradition of ritual poetic speech which until recently was an important source of authority tradition and identity But it has also given rise to new and hybrid forms of poetic expression This first study to analyse language change in relation to political marginality argues that political coercion or cognitive process of style reduction may partially explain what has happened but equally important in language shift is the role of linguistic ideologies *The Social and Psychological Contexts of Language* R. N. St. Clair, H. Giles, 2013-05-13 Published in the year 1982 *The Social and Psychological Contexts of Language* is a valuable contribution to the field of Social Psychology **Meaning, Discourse and Society** Wolfgang Teubert, 2010-03-25 *Meaning Discourse and Society* investigates the construction of reality within discourse When people talk about things such as language the mind globalisation or weeds they are less discussing the outside world than objects they have created collaboratively by talking about them Wolfgang Teubert shows that meaning cannot be found in mental concepts or neural activity as implied by the cognitive sciences He argues instead that meaning is negotiated and knowledge is created by symbolic interaction thus taking language as a social rather than a mental phenomenon Discourses Teubert contends can be viewed as collective minds enabling the members of discourse communities to make sense of themselves and of the world around them By taking an active stance in constructing the reality they share people thus can take part in moulding the world in accordance with their perceived needs *Cognitive Linguistics in the Redwoods* Eugene H. Casad, 2011-07-11 No detailed description available for *Cognitive Linguistics in the Redwoods* **Biblical Hebrew in Transition** Mark F. Blount, 2014-08-28 Approaches to Language Culture and Cognition aims to bring cognitive linguistics and linguistic anthropology closer together calling for further investigations of language and culture from cognitively informed perspectives against the backdrop of the current trend of linguistic anthropology      **The Acquisition of Numeral Classifiers** Kasumi Yamamoto, 2011-05-03 The book is about the numeral classifier system and the acquisition of Japanese classifiers by Japanese children It consists of two parts First it provides a general typological characterization of numeral classifier phrases and discusses problems in determining what constitutes the nature of classifiers It also discusses the semantic properties of numeral classifiers based on an analysis of four languages from four different language families Second it examines the acquisitions of Japanese numeral classifiers by Japanese preschool children ages 3 to 6 with a primary emphasis on the development of comprehension The importance of the study is that it reveals that young children have a much greater sensitivity to the conceptual underpinnings of the numeral classifier system than was previously considered to be the case The research results also provide a converging source of evidence that young children often come to initially grasp the structure of the world in ways that are better understood in cognitive than perceptual terms The implications will contribute to not only the area of language acquisition but also categorization and conceptual development
