Species Problem Biological Species Ontology And The Metaphysics Of Biology:

The Species Problem David N. Stamos, 2003-01-01 Stamos squarely confronts the problem of determining what a biological species is whether species are real and the nature of their reality He critically considers the evolution of the major contemporary views of species and also offers his own solution to the species problem

The Species Problem Igor Pavlinov, 2013-02-06 The book includes collection of theoretical papers dealing with the species problem which is among most fundamental issues in biology The principal topics are consideration of the species problem from the standpoint of modern non classical science paradigm with emphasis on its conceptual status presuming its analysis within certain conceptual framework evolutionary emergence of the species as discrete unit of certain level of generality epistemological consideration of the species as a particular explanatory hypotheses with respective revised concepts of biodiversity and conservation considerations of evolutionary and phylogenomic species concepts as candidates for the universal one re appraisal of the biological species concept based on the friend foe recognition system species delimitation approach using multi locus coalescent based method a re consideration of the Darwin s species concept

Species Problems and Beyond John S. Wilkins, Frank E. Zachos, Igor Ya. Pavlinov, 2022-06-14 Species Problems and Beyond offers a collection of up to date essays discussing from an interdisciplinary perspective the many ramifications of the Species Problem The authors represent experts in the philosophy of biology in species level evolutionary investigations and in biodiversity studies and conservation Some of the topics addressed concern the context sensitivity of the term species species as individuals processes natural kinds or as operative concepts species delimitation in the age of Big genomic Data and taxonomic inflation and its consequences for conservation strategies The carefully edited volume will be an invaluable resource for philosophers of biology and evolutionary biologists alike Olivier Rieppel Rowe Family Curator of Evolutionary Biology Negaunee Integrative Research Center Field Museum USA Species or the Species Problem is a topic in science in the philosophy of science and in general philosophy In fact it encompasses many aspects of the same problem and these are dealt with in this volume Species are often thought of as fundamental units of biological matter to be used in ecology conservation classification and biodiversity The chapters in this book present opposing views on the current philosophical and conceptual issues of the Species Problem in biology Divided into four sections Concepts and Theories Practice and Methods Ranks and Trees and Names and Metaphysics and Epistemologies the book is authored by biologists philosophers and historians many leaders in their fields Topics include ontology of species definitions of both species category and units species rank speciation issues nomenclature ecology and species conservation Species Problems and Beyond aims to clarify the contemporary issues of the Species Problem It is ideal for use in upper level seminars and courses in Evolutionary Biology Philosophy of Science Philosophy of Biology Systematics and Taxonomy and Phylogenetics Cladistics and for any scholar in these fields

The Species Problem Igor Ya. Pavlinov, 2023-02-24 The general notion of species is one of the most fundamental in biology But

an idea of species is also one of the most persistent unresolved obsessions of biologists philosophers and theoreticians This new book investigates the multifaceted problem species as a conceptual envelope of that notion Contemporary conceptualists and evolutionary epistemology allow for a fresh look by analyzing the framework of history viewed as changes ordered by changing philosophical scientific contexts In this analysis the species problem is characterized in a pluralistic non trivial manner in contrast to a more monistic accepted view Key Features Provides new insights into the persistent species problem Focuses on conceptual history and identifies pivotal landmarks in the history of the concept of species Argues for a scientific consistency of species pluralism Discusses the evolving species hood in the context of new essentialism Related Titles Wilkins J S et al eds Species Problems and Beyond Contemporary Issues in Philosophy and Practice ISBN 978 1 0322 2147 2 Mishler B D What if anything are species ISBN 978 1 4987 1454 9 Wilkins J S Species The Evolution of the Idea Second Edition ISBN 978 1 1380 5574 2 Sigwart J D What Species Mean A User s Guide to the Units of Biodiversity ISBN 978 1 4987 9937 9

Darwin and the Nature of Species David N. Stamos, 2012-02-01 Since the 1859 publication of *On the Origin of Species* the concept of species in biology has been widely debated with its precise definition far from settled And yet amazingly there have been no books devoted to Charles Darwin s thinking on the term until now David N Stamos gives us a groundbreaking historical reconstruction of Darwin s detailed yet often misinterpreted thoughts on this complex concept Stamos provides a thorough and detailed analysis of Darwin s extensive writings both published and unpublished in order to reveal Darwin s actual species concept Stamos argues that Darwin had a unique evolutionary species concept in mind one that was not at all a product of his time Challenging currently accepted views that believe Darwin was merely following the species ascriptions of his fellow naturalists Stamos works to prove that this prevailing nominalistic view should be overturned This book also addresses three issues pertinent to the philosophy of science the modern species problem the nature of concept change in scientific revolutions and the contextualist trend in professional history of science **No God, No Science** Michael Hanby, 2016-11-30 No God No Science Theology Cosmology Biology presents a work of philosophical theology that retrieves the Christian doctrine of creation from the distortions imposed upon it by positivist science and the Darwinian tradition of evolutionary biology Argues that the doctrine of creation is integral to the intelligibility of the world Brings the metaphysics of the Christian doctrine of creation to bear on the nature of science Offers a provocative analysis of the theoretical and historical relationship between theology metaphysics and science Presents an original critique and interpretation of the philosophical meaning of Darwinian biology *Mammalian Evolution, Diversity and Systematics* Frank Zachos, Robert Asher, 2018-10-22 There are nearly 6 000 mammalian species among them our own Research on our evolutionary cousins has a long history but the last 20 years have seen particularly rapid progress in disentangling the interrelationships and evolutionary history of mammals The present volume combines up to date reviews on mammalian phylogenetics with paleontological taxonomic and evolutionary chapters and also summarizes the historical development of our insights in

mammalian relationships and thus our own place in the Tree of Life Our book places the present biodiversity crisis in context with one in four mammal species threatened by extinction and reviews the distribution and conservation of mammalian diversity across the globe This volume is the introductory tome to the new Mammalia series of the Handbook of Zoology and will be essential reading for mammalogists zoologists and conservationists alike **The Origins of Sociable Life:**

Evolution After Science Studies M. Hird, 2009-05-29 This ambitious book considers social scientific topics such as identity community sexual difference self and ecology from a microbial perspective Harnessing research and evidence from earth systems science and microbiology and particularly focusing on symbiosis and symbiogenesis the book argues for the development of a microontology of life **Genetics and Evolution of Infectious Diseases** Michel Tibayrenc, 2010-12-17

Genetics and Evolution of Infectious Diseases is at the crossroads between two major scientific fields of the 21st century evolutionary biology and infectious diseases The genomic revolution has upset modern biology and has revolutionized our approach to ancient disciplines such as evolutionary studies In particular this revolution is profoundly changing our view on genetically driven human phenotypic diversity and this is especially true in disease genetic susceptibility Infectious diseases are indisputably the major challenge of medicine When looking globally they are the number one killer of humans and therefore the main selective pressure exerted on our species Even in industrial countries infectious diseases are now far less under control than 20 years ago The first part of this book covers the main features and applications of modern technologies in the study of infectious diseases The second part provides detailed information on a number of the key infectious diseases such as malaria SARS avian flu HIV tuberculosis nosocomial infections and a few other pathogens that will be taken as examples to illustrate the power of modern technologies and the value of evolutionary approaches Takes an integrated approach to infectious diseases Includes contributions from leading authorities Provides the latest developments in the field

Biosemiotics and Evolution Elena Pagni, Richard Theisen Simanke, 2022-01-03 This book reviews the evolution of Biosemiotics and gives an outlook on the future of this interdisciplinary new discipline In this volume the foundations of symbolism are transformed into a phenomenological technological philosophical and psychological discussion enriching the readers knowledge of these foundations It offers the opportunity to rethink the impact that evolution theory and the confirmations about evolution as a historical and natural fact has had and continues to have today The book is divided into three parts Part I Life Meaning and Information Part II Semiosis and Evolution Part III Physics medicine and bioenergetics It starts by laying out a general historical philosophical and scientific framework for the collection of studies that will follow In the following some of the main reference models of evolutionary theories are revisited Extended Synthesis Formal Darwinism and Biosemiotics The authors shed new light on how to rethink the processes underlying the origins and evolution of knowledge the boundary between teleonomic and teleological paradigms of evolution and their possible integration the relationship between linguistics and biological sciences especially with reference to the concept of causality biological

information and the mechanisms of its transmission the difference between physical and biosemiotic intentionality as well as an examination of the results offered or deriving from the application in the economics and the engineering of design of biosemiotic models for the transmission of culture digitalization and proto design This volume is of fundamental scientific and philosophical interest and seen as a possibility for a dialogue based on theoretical and methodological pluralism The international nature of the publication with contributions from all over the world will allow a further development of academic relations at the service of the international scientific and humanistic heritage
