Spectral Generalizations Of Line Graphs On Graphs With Least Eigenvalue :

Spectral Generalizations of Line Graphs Dragoš M. Cvetković, Peter Rowlinson, Slobodan Simić, 2014-05-14 Line graphs have the property that their least eigenvalue is greater than or equal to 2 a property shared by generalized line graphs and a finite number of so called exceptional graphs This book deals with all these families of graphs in the context of their spectral properties Technical descriptions of these graphs are included in the appendices while the bibliography provides over 250 references It will be an important resource for all researchers with an interest in algebraic graph theory

One of the beautiful results in the representation theory of the finite groups is McKay s theorem on a correspondence between representations of the binary polyhedral group of $SU(2)$ and vertices of an extended simply laced Dynkin diagram The Coxeter transformation is the main tool in the proof of the McKay correspondence and is closely interrelated with the Cartan matrix and Poincaré series The Coxeter functors constructed by Bernstein Gelfand and Ponomarev plays a distinguished role in the representation theory of quivers On these pages the ideas and formulas due to J N Bernstein I M Gelfand and V A Ponomarev H S M Coxeter V Dlab and C M Ringel V Kac J McKay T A Springer B Kostant P Slodowy R Steinberg W Ebeling and several other authors as well as the author and his colleagues from Subbotin s seminar are presented in detail Several proofs seem to be new Strongly Regular Graphs Andries E. Brouwer,H. Van Maldeghem,2022-01-13 Strongly regular graphs lie at the intersection of statistical design group theory finite geometry information and coding theory and extremal combinatorics This monograph collects all the major known results together for the first time in book form creating an invaluable text that researchers in algebraic combinatorics and related areas will refer to for years to come The book covers the theory of strongly regular graphs polar graphs rank 3 graphs associated to buildings and Fischer groups cyclotomic graphs two weight codes and graphs related to combinatorial configurations such as Latin squares quasi symmetric designs and spherical designs It gives the complete classification of rank 3 graphs including some new constructions More than 100 graphs are treated individually Some unified and streamlined proofs are featured along with original material including a new approach to the affine half spin graphs of rank 5 hyperbolic polar spaces

Spectra of Graphs Andries E. Brouwer,Willem H. Haemers,2011-12-17 This book gives an elementary treatment of the basic material about graph spectra both for ordinary and Laplace and Seidel spectra The text progresses systematically by covering standard topics before presenting some new material on trees strongly regular graphs two graphs association schemes p ranks of configurations and similar topics Exercises at the end of each chapter provide practice and vary from easy yet interesting applications of the treated theory to little excursions into related topics Tables references at the end of the book an author and subject index enrich the text Spectra of Graphs is written for researchers teachers and graduate

students interested in graph spectra The reader is assumed to be familiar with basic linear algebra and eigenvalues although some more advanced topics in linear algebra like the Perron Frobenius theorem and eigenvalue interlacing are included
