Spectral Theory Of Approximation Methods For Convolution Equations Operator Theory Advances And Applications Vol 74:

Spectral Theory of Approximation Methods for Convolution Equations Roland Hagen, Steffen Roch, Bernd Silbermann, 2012-12-06 The aim of the present book is to propose a new algebraic approach to the study of norm stability of operator sequences which arise for example via discretization of singular integral equations on composed curves A wide variety of discretization methods including quadrature rules and spline or wavelet approximations is covered and studied from a unique point of view The approach takes advantage of the fruitful interplay between approximation theory concrete operator theory and local Banach algebra techniques The book is addressed to a wide audience in particular to mathematicians working in operator theory and Banach algebras as well as to applied mathematicians and engineers interested in theoretical foundations of various methods in general use particularly splines and wavelets The exposition contains numerous examples and exercises Students will find a large number of suggestions for their own investigations

Ball, Jussi Behrndt, Karl-Heinz Förster, Volker Mehrmann, Carsten Trunk, 2012-06-15 The present volume contains a collection of original research articles and expository contributions on recent developments in operator theory and its multifaceted applications They cover a wide range of themes from the IWOTA 2010 conference held at the TU Berlin Germany including spectral theory function spaces mathematical system theory evolution equations and semigroups and differential and difference operators The book encompasses new trends and various modern topics in operator theory and serves as a useful source of information to mathematicians scientists and engineers **Achievements and Challenges in the Field of Convolution Operators** Albrecht Böttcher, Oleksiy Karlovych, Eugene Shargorodsky, Ilya M. Spitkovsky, 2025-03-13 This volume which is dedicated to Yuri Karlovich on the occasion of his 75th birthday includes biographical material personal reminiscences and carefully selected papers The contributions constituting the core of this volume are written by mathematicians who have collaborated with Yuri or have been influenced by his vast mathematical work They are devoted to topics of Yuri Karlovich's work for five decades starting with his work on singular integral operators with shift then broadened to include Toeplitz Wiener Hopf Fourier and Mellin convolution and pseudodifferential operators factorisation of almost periodic matrix functions and local trajectory methods for the study of algebras of convolution and singular integral operators *A Panorama of Modern Operator Theory and Related Topics* Harry Dym, Marinus A. Kaashoek, Peter Lancaster, Heinz Langer, Leonid Lerer, 2012-02-01 This book is dedicated to the memory of Israel Gohberg 1928 2009 one of the great mathematicians of our time who inspired innumerable fellow mathematicians and directed many students The volume reflects the wide spectrum of Gohberg's mathematical interests It consists of more than 25 invited and peer reviewed original research papers written by his former students co authors and friends Included are contributions to single and

multivariable operator theory commutative and non commutative Banach algebra theory the theory of matrix polynomials and analytic vector valued functions several variable complex function theory and the theory of structured matrices and operators Also treated are canonical differential systems interpolation completion and extension problems numerical linear algebra and mathematical systems theory *Toeplitz Matrices and Singular Integral Equations* Albrecht Böttcher, Israel Gohberg, P. Junghanns, 2012-12-06 This volume dedicated to Bernd Silbermann on his sixtieth birthday collects research articles on Toeplitz matrices and singular integral equations written by leading area experts The subjects of the contributions include Banach algebraic methods Toeplitz determinants and random matrix theory Fredholm theory and numerical analysis for singular integral equations and efficient algorithms for linear systems with structured matrices and reflect Bernd Silbermann's broad spectrum of research interests The volume also contains a biographical essay and a list of publications The book is addressed to a wide audience in the mathematical and engineering sciences The articles are carefully written and are accessible to motivated readers with basic knowledge in functional analysis and operator theory **Approximation**

of Additive Convolution-Like Operators Victor Didenko, Bernd Silbermann, 2008-09-19 Various aspects of numerical analysis for equations arising in boundary integral equation methods have been the subject of several books published in the last 15 years 95 102 183 196 198 Prominent examples include various classes of 0 dimensional singular integral equations or equations related to single and double layer potentials Usually a mathematically rigorous foundation and error analysis for the approximate solution of such equations is by no means an easy task One reason is the fact that boundary integral operators generally are neither integral operators of the form identity plus compact operator nor identity plus an operator with a small norm Consequently existing standard theories for the numerical analysis of Fredholm integral equations of the second kind are not applicable In the last 15 years it became clear that the Banach algebra technique is a powerful tool to analyze the stability problem for relevant approximation methods 102 103 183 189 The starting point for this approach is the observation that the stability problem is an invertibility problem in a certain Banach or C algebra As a rule this algebra is very complicated and one has to find relevant subalgebras to use such tools as local principles and representation theory However in various applications there often arise continuous operators acting on complex Banach spaces that are not linear but only additive i.e. $A(x+y) = Ax + Ay$ for all x, y from a given Banach space It is easily seen that additive operators are $\mathbb{R}$ linear provided they are continuous *Singular Integral Operators, Factorization and Applications* Albrecht Böttcher, Marinus A.

Analysis of Toeplitz Operators Albrecht Böttcher, Bernd Silbermann, 2006-10-11 Since the late 1980s Toeplitz operators and matrices have remained a field of

extensive research and the development during the last nearly twenty years is impressive. One encounters Toeplitz matrices in plenty of applications on the one hand and Toeplitz operators confirmed their role as the basic elementary building blocks of more complicated operators on the other. Several monographs on Toeplitz and Hankel operators were written during the last decade. These include Peller's grandiose book on Hankel operators and their applications and Nikolski's beautiful easy reading on operators, functions and systems with emphasis on topics connected with the names of Hardy, Hankel and Toeplitz. They also include books by the authors together with Hagen, Roch, Yu, Karlovich, Spitkovsky, Grudsky and Rabinovich. Thus results, techniques and developments in the field of Toeplitz operators are now well presented in the monographic literature. Despite these competitive works we felt that large parts of the first edition of the present monograph, which is meanwhile out of stock, have not lost their fascination and relevance. Moreover, the first edition has received a warm reception by many colleagues and became a standard reference. This encouraged us to venture on thinking about a second edition and we are grateful to the Springer Publishing House for showing an interest in this.
