Spectroscopy of Biological Molecules Camille Sandorfy, T. Theophanides, 2012-12-06 This volume contains the proceedings of the NATO Advanced Study Institute on the Spectroscopy of Biological Molecules which took place on July 4-15 1983 in Acquafredda di Maratea Italy The institute concentrated on three main subjects the structure and dynamics of DNA proteins and visual and plant pigments Its timeliness has been linked to rapid advances in certain spectroscopic techniques which yielded a considerable amount of new information on the structure and interactions of biologically important molecules Among these techniques Fourier transform infrared resonance and surface enhanced Raman spectroscopies Raman microscopy and micro probing time resolved techniques two photon and ultrafast electronic and ^{13}C ^{15}N and ^{31}P NMR spectroscopies and kinetic and static IR difference spectroscopy received a great deal of attention at the Institute In addition an entirely new technique near millimeter wave spectroscopy has been presented and discussed Two introductory quantum chemical lectures one on the structure of water in DNA and another on the energy bands in DNA and proteins set the stage for the experimentally oriented lectures that followed Fundamental knowledge on hydrogen bonding was the topic of two other lectures Panel discussions were held on the structure and conformations of DNA metal DNA adducts and proteins and on visual pigments Many scientists who normally attend different conferences and never meet met at Acquafredda di Maratea We feel that at the end of our Institute a synthetic view emerged on the powerful spectroscopic and theoretical methods which are now available for the study of biological molecules

Fifth International Conference on the Spectroscopy of Biological Molecules T. Theophanides, Jane Anastassopoulou, Nikolaos Fotopoulos, 2012-12-06 The series of Conferences on the Spectroscopy of Biological Molecules aims to stimulate research and development in this area of Science The relationship between the structure and the biological activity of such materials as proteins lipids and nucleic acids is fundamental The 5th European Conference on the Spectroscopy of Biological Molecules ECSBM is held at the Hotel Poseidon Club Loutraki Greece on 5-10 September 1993 The scientific contents are remained the same as in the past conferences Emphasis is given to vibrational spectroscopy mainly infrared and Raman applied to the study of structure and dynamics of proteins nucleic acids porphyrins carbohydrates membranes etc Most of the contributions describe molecular dynamics and excitation processes in particular the electronic vibrational excitations which are studied by FR Raman Fourier Transform Infrared FR IR coupled often with microscopy and chromatography Contributions also include FR Raman and FT IR instrumentation and new developments in this area and applications in Biology and Medicine Furthermore there is a plenary lecture in Mass Spectrometry and its applications in biomedical analysis and a session devoted to Nuclear Magnetic Resonance NMR and its application in the study of biological molecules Several contributions are devoted to other methods such as CD optical absorption fluorescence and molecular graphics simulations This volume of ECSBM contains shown articles by the invited and contributed lectures as well as from the Poster presentations from many European and non European

Biophysical Tools for Biologists John J. Correia, H. William Detrich III, 2011-09-21 Driven in part by the development of genomics proteomics and bioinformatics as new disciplines there has been a tremendous resurgence of interest in physical methods to investigate macromolecular structure and function in the context of living cells This volume in Methods in Cell Biology is devoted to biophysical techniques in vitro and their applications to cellular biology Biophysical Tools for Biologists covers methods oriented chapters on fundamental as well as cutting edge techniques in molecular and cellular biophysics This book is directed toward the broad audience of cell biologists biophysicists pharmacologists and molecular biologists who employ classical and modern biophysical technologies or wish to expand their expertise to include such approaches It will also interest the biomedical and biotechnology communities for biophysical characterization of drug formulations prior to FDA approval Describes techniques in the context of important biological problems Delineates critical steps and potential pitfalls for each method Includes full color plates to illustrate techniques

Biomolecular Structure and Dynamics G. Vergoten, T. Theophanides, 2012-12-06 Biomolecular Structure and Dynamics describes recent fundamental advances in the experimental and theoretical study of molecular dynamics and stochastic dynamic simulations X ray crystallography and NMR of biomolecules the structure of proteins and its prediction time resolved Fourier transform IR spectroscopy of biomolecules the computation of free energy applications of vibrational CD of nucleic acids and solid state NMR Further presentations include recent advances in UV resonance Raman spectroscopy of biomolecules semiempirical MO methods empirical force fields quantitative studies of the structure of proteins in water by Fourier transform IR and density functional theory Metal ligand interactions DFT treatment of organometallic and biological systems and simulation vs X ray and far IR experiments are also discussed in some detail The book provides a broad perspective of the current theoretical aspects and recent experimental findings in the field of biomolecular dynamics revealing future research trends especially in areas where theoreticians and experimentalists could fruitfully collaborate

National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1971 Spectroscopy of Inorganic Bioactivators Theophile Theophanides, 1989-07-31 This edition is the labor of many enthusiastic scientists who were invited to teach at a NATO Advanced Study Institute on the Spectroscopy of Inorganic Bioactivators which took place on August 20 30 1988 at Club Poseidon Loutraki Greece In this book the subjects were taught through several well prepared lectures These lectures stretch the fact that scientific knowledge is the painfully gathered product of many wonderful human minds I made an attempt to divide the lectures into separate chapters however there is interaction among the lectures as I hope the book will show First there is introductory on an lecture supercomputing and super computers and their applications to solving structures of biological molecules followed by a state of the art x ray diffraction method at pi co second times Important new advances have been made in x ray diffraction analysis at picosecond times in Hadamard spectroscopy in micro Raman spectroscopy in the Near Infrared region

1 01 m and remote sensing by Fourier Transform Infrared Spectroscopy The chapters that follow include applications of spectroscopic technique to vii viii biologically important molecules such as DNA proteins membranes and metal ion biological molecule interactions I would like to express my thanks to all the authors for their contributions and their cooperation in submitting their manuscript I also thank the NATO Science Committee for making this possible The field looks very promising for significant and exciting developments in the application of spectroscopy to bioactivators

Non-Animal Techniques in Biomedical and Behavioral Research and Testing Michael Kapis, Shayne C. Bioinorganic Chemistry D.P. Kessissoglou, 2012-12-06 Bioinorganic chemistry is primarily concerned with the role of metal atoms in biology and is a very active research field However even though such important structures of metalloenzymes are known as the MoFeCo of nitrogenase Cu or Mn superoxide dismutase and plastocyanin the synthetic routes to the modelling of such centers remains a matter of acute scientific interest Other metalloenzymes such as the Mn center of the oxygen evolving complex of PSII are still the focus of in depth examination both spectroscopic and structural Another area of concern is the interaction between drugs and metals and metal ion antagonism Understanding the chemistry of metal ions in biological systems will bring benefits in terms of understanding such problems as biomineralization and the production of advanced materials by micro organisms The 29 contributions to Bioinorganic Chemistry An Inorganic Perspective of Life give an excellent summary of the state of the art in this field covering areas from the NMR of paramagnetic molecules to the use of lanthanide porphyrins in artificial batteries
