Spectroscopy Of Light And Heavy Quarks:

Spectroscopy of Light and Heavy Quarks Ugo Gastaldi, Robert Klapisch, F.E. Close, 2012-12-06 The second course of the International School on Physics with Low Energy Antiprotons was held in Erice Sicily at the Ettore Majorana Centre for Scientific Culture from May 20 to May 31 1987 The School is dedicated to physics accessible to experiments using low energy antiprotons especially in view of operation of the LEAR facility at CERN with the upgraded antiproton source AAC Antiproton Accumulator AA and Antiproton Collector ACOL The first course in 1986 covered topics related to fundamental symmetries This book contains the proceedings of the second course which focused on spectroscopy of light and heavy quarks These proceedings contain both the tutorial lectures and contributions presented by participants during the School The papers are organized in four sections The first section includes theoretical reviews Section II contains experimental reviews and covers the results in meson spectroscopy from DM2 MARK III GAMS and n WA76 Section III presents the new meson spectroscopy experiments in preparation at CERN and Fermilab Crystal Barrel OBELIX Jetset and E760 Section IV is dedicated to LEAR and to future facilities where meson spectroscopy would be a principal component of the physics programme We should like to thank Dr Alberto Gabriele and the staff of the Ettore Majorana Centre who provided for a smooth running of the School and a very pleasant stay We are particularly grateful to Mrs Anne Marie Bugge for her crucial help during the preparation and running of the School and for the editing of these Proceedings

Quark Confinement and the Hadron Spectrum III Nathan Isgur, 2000 The confinement mechanism of the quarks in QCD is one of the most challenging and open problems in physics Confinement is a nonperturbative phenomenon and a definite way to handle it has not yet been found in field theory There are lattice calculations that can produce the low lying states of the spectrum and measure many important physical quantities but nevertheless the development of analytical techniques is of extreme importance for understanding the physics involved in confinement In this respect it is important to test the results obtained directly from the theory Bethe Salpeter kernel effective Hamiltonians quark potential etc on the spectrum form factors and decays of bound states of quarks and gluons and to relate them to the results of lattice theory In this book the question of the confinement mechanism is addressed explanations in terms of monopoles instantons and dyons are reviewed and the connection with duality is discussed

Heavy Quark Physics David Blaschke, Mikhal A. Ivanov, Thomas Mannel, 2004-06-09 This volume covers the main topics in heavy flavour physics in a comprehensive yet accessible way The material is presented as a combination of extensive introductory lectures and more typical contributions This book will benefit postgraduate students and researchers alike

Flavor Physics for the Millennium Jonathan L. Rosner, 2001 This book is devoted to the broad subject of flavor physics embracing the question of what distinguishes one type of elementary particles from another The articles range from the forefront of formal theory treating the physics of extra dimensions to details of particle detectors Although special emphasis is placed on the physics of kaons charmed and beauty particles top quarks and neutrinos the

articles also dealing with electroweak physics quantum chromodynamics supersymmetry and dynamical electroweak symmetry breaking Violations of fundamental symmetries such as time reversal invariance are discussed in the context of neutral kaons beauty particles electric dipole moments and parity violation in atoms The physics of the Cabibbo Kobayashi Maskawa matrix and of quark masses are described in some detail both from the standpoint of present and future experimental knowledge and from a more fundamental viewpoint where physicists are still searching for the correct theory
