Steinlen, 2005 **Neural Mechanisms of Perceptual Categorization as Precursors to Speech Perception** Einat Liebenthal, Lynne E. Bernstein, 2017-05-03 Perceptual categorization is fundamental to the brain's remarkable ability to process large amounts of sensory information and efficiently recognize objects including speech Perceptual categorization is the neural bridge between lower level sensory and higher level language processing A long line of research on the physical properties of the speech signal as determined by the anatomy and physiology of the speech production apparatus has led to descriptions of the acoustic information that is used in speech recognition e g stop consonants place and manner of articulation voice onset time aspiration Recent research has also considered what visual cues are relevant to visual speech recognition i e the visual counter parts used in lipreading or audiovisual speech perception Much of the theoretical work on speech perception was done in the twentieth century without the benefit of neuroimaging technologies and models of neural representation Recent progress in understanding the functional organization of sensory and association cortices based on advances in neuroimaging presents the possibility of achieving a comprehensive and far reaching account of perception in the service of language At the level of cell assemblies research in animals and humans suggests that neurons in the temporal cortex are important for encoding biological categories On the cellular level different classes of neurons interneurons and pyramidal neurons have been suggested to play differential roles in the neural computations underlying auditory and visual categorization The moment is ripe for a research topic focused on neural mechanisms mediating the emergence of speech representations including auditory visual and even somatosensory based forms Important progress can be achieved by juxtaposing within the same research topic the knowledge that currently exists the identified lacunae and the theories that

can support future investigations This research topic provides a snapshot and platform for discussion of current understanding of neural mechanisms underlying the formation of perceptual categories and their relationship to language from a multidisciplinary and multisensory perspective It includes contributions reviews original research methodological developments pertaining to the neural substrates dynamics and mechanisms underlying perceptual categorization and their interaction with neural processes governing speech perception Proceedings from the Institute of Phonetic Sciences of the University of Amsterdam ,2003 **Functional Phonology** Paul P. G. Boersma,1998 **Auditory Brainstem Evoked Potentials** Ananthanarayan Krishnan,2021-10-06 Auditory Brainstem Evoked Potentials Clinical and Research Applications provides a solid foundation of the theoretical principles of auditory evoked potentials This understanding is important for both the development of optimal clinical test strategies and interpretation of test results Developed for graduate level audiology students this comprehensive text aims to build a fundamental understanding of auditory evoked brainstem responses ABR and their relationship to normal and impaired auditory function as well as its various audiologic and neurotologic applications In addition to covering the classical onset ABR the book provides a thorough review of sustained brainstem responses elicited by complex sounds including auditory steady state response ASSR envelope following response EFR and frequency following response FFR and the growing clinical and research applications of these responses By exploring why certain stimulus manipulations are required to answer specific clinical questions the author provides the resources needed for students and clinicians to make reasoned decisions about the optimal protocol to use in a given situation Key Features A full chapter devoted to laboratory exercises Numerous illustrations to help explain key concepts Description of neural bases underlying amplitude and latency changes Troubleshooting techniques End of chapter summaries
