Blundell,2007-02-26 This book builds on a previous work Creative 3 D Display and Interaction Interfaces but may be read as a stand alone book A trans disciplinary approach is adopted thereby making the content accessible to wide ranging audiences from both the sciences and humanities Additionally the book is highly relevant to computer users who would like to learn more about new approaches to computer interaction to those wishing to develop new forms of creative digital media and to those within industry who are involved in the advancement of computers and computer related products **Representing Consumers** Barbara Stern,2003-09-02 Consumer research has traditionally focused on issues of epistemology in the collection and analysis of data As a consequence the crisis in representation which has radically reshaped understanding in the social sciences has so far had very little impact on consumer research This book redresses the balance with an investigation of representation and constructions of truth in consumer research Subjects covered include construction of the researcher and consumer voice quantitative tools and representation advertising narratives poetic representation of consumer experience the crisis in the crisis concept consumer oriented ethnographic research The essays are written by experts from Britain and the United States and draw on a broad range of theoretical approaches **Romancing the Market** Stephen Brown,Bill Clarke,Anne Marie Doherty,2003-09-02 Romancing the Market is a radical rethinking of marketing understanding Marketing and consumer research are dominated by the neo classical ideals of the Enlightenment such as rigour dispassion and the search for scientific truth In a series of provocative essays the contributors challenge these assumptions with reference to the individuality innovation and imagination of the Romantic movement The book contains essays by an international selection of the most creative contemporary marketing scholars including Elizabeth Hirschman Russell Belk Craig Thompson and Robin Wensley Illuminating controversial and cutting edge this is an essential work for all those interested in new directions in marketing and consumer research Robust Computer Vision N. Sebe,M.S. Lew,2013-06-29 From the foreword by Thomas

Huang During the past decade researchers in computer vision have found that probabilistic machine learning methods are extremely powerful This book describes some of these methods In addition to the Maximum Likelihood framework Bayesian Networks and Hidden Markov models are also used Three aspects are stressed features similarity metric and models Many interesting and important new results based on research by the authors and their collaborators are presented Although this book contains many new results it is written in a style that suits both experts and novices in computer vision The Art of Structuring Katrin Bergener, Michael Räckers, Armin Stein, 2019-01-25

Structuring or as it is referred to in the title of this book the art of structuring is one of the core elements in the discipline of Information Systems While the world is becoming increasingly complex and a growing number of disciplines are evolving to help make it a better place structure is what is needed in order to understand and combine the various perspectives and approaches involved Structure is the essential component that allows us to bridge the gaps between these different worlds and offers a medium for communication and exchange The contributions in this book build these bridges which are vital in order to communicate between different worlds of thought and methodology be it between Information Systems IS research and practice or between IS research and other research disciplines They describe how structuring can be and should be done so as to foster communication and collaboration The topics covered reflect various layers of structure that can serve as bridges models processes data organizations and technologies In turn these aspects are complemented by visionary outlooks on how structure influences the field **Creative 3-D Display and Interaction Interfaces** Barry G. Blundell, Adam J. Schwarz, 2006 This authoritative book provides a groundbreaking trans disciplinary approach to the creation of computer interface technologies that more naturally matches the complex needs of human sensory and motor systems The conventional interface though useful in the past has started to inhibit human creativity in key areas such as creative 3 D design medical diagnostics and the visualization of complex structures With the aim of effectively advancing the human computer interaction experience this book takes a refreshing approach by bringing together a range of important disciplines within a common framework BOOK JACKET 3D
