Adewumi, Andrei Polejack, Joanna Vince, Maree E. Fudge, 2023-12-05 In the last decade the concept of a Blue Economy has ignited a deep theoretical debate Ranging from the integration of the triple bottom line of sustainability to the optimization of profit from ocean exploitation the meaning of the term blue economy differs considerably between epistemic communities and even more so among national and regional policies There is a general sense of the opportunity to realise enhanced social and economic benefits from the sustainable utilisation of their ocean and coastal resources under the umbrella framework of blue economy Blue economy is gaining traction already as a significant component of national policies even in spite of a clear conceptualization of the term Many countries are now preparing national policies towards realising their blue economy ambitions utilizing the concept as they see fit Likewise multilateral and regional organisations are developing guidelines and providing investment in new research technologies and financing tools that promote blue economy Critical challenges abound in particular in less privileged countries These include the gap in research capabilities governments prioritizing social wellbeing and economic profit in contrast to environmental protection the identification of new and emerging areas of ocean economic activity that are both socially and ecologically sustainable and holds viable business models that can attract private investment

**Sustainability** National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Transition Toward Sustainability After 15 Years: Where Do We Stand in Advancing the Scientific Foundation, 2016-07-25

In 1999 the National Academies of Sciences Engineering and Medicine released a landmark report *Our Common Journey A Transition toward Sustainability* which attempted to reinvigorate the essential strategic connections between scientific research technological development and societies efforts to achieve environmentally sustainable improvements in human well being 1 The report emphasized the need for place based and systems approaches to sustainability proposed a research strategy for using scientific and technical knowledge to better inform the field and highlighted a number of priorities for actions that could contribute to a sustainable future The past 15 years have brought significant advances in observational and predictive capabilities for a range of natural and social systems as well as development of other tools and approaches useful for sustainability planning In addition other frameworks for environmental decision making such as those that focus on climate adaptation or resilience have become increasingly prominent A careful consideration of how these other approaches might intersect with sustainability is warranted particularly in that they may affect similar resources or rely on similar underlying scientific data and models To further the discussion on these outstanding issues the National Academies of Sciences Engineering and Medicine convened a workshop on January 14 15 2016 Participants discussed progress in sustainability science during the last 15 years potential opportunities for advancing the research and use of scientific knowledge to support a transition toward sustainability and challenges specifically related to establishing indicators and observations to support sustainability research and practice This report summarizes the presentations and discussions from the workshop

**Marine Bioprospecting for Sustainable Blue-bioeconomy** Sesan Abiodun Aransiola, Abayomi Bamişaye, Olabisi Peter Abioye, Naga Raju Maddela, 2024-10-03 This volume comprehensively discusses marine bioprospecting and its applications in the marine bioeconomy specifically in clean energy generation and in biomedical industrial and agricultural sectors The advent of modern technology particularly advancements in deep sea exploration and biotechnology has enabled scientists to delve deeper into the ocean's depths and discover a treasure trove of unique organisms and compounds This demonstrates that the rich history of human interactions with the oceans is firmly ingrained in marine bioprospecting The blue economy which is a more accurate name for the systematic search for valuable substances and organisms in the water has gained popularity in recent years as a possible route for sustainable economic development One of the key driving factors behind marine bioprospecting is the growing realization that marine organisms possess unique biochemical compounds with the potential to revolutionize various industries These compounds include novel enzymes antimicrobial agents bioactive molecules and even potential pharmaceuticals Readers will learn about the applications of these discoveries in bioremediation wastewater treatment and biofuel production as well as the identification of natural

substitutes for things that are detrimental to the environment which include biodegradable plastics derived from marine microorganisms The primary audience for the book will be governmental and international organizations professionals and economists while the secondary audience will be professors and researchers in the fields of Chemistry Biotechnology Environmental Microbiology and general Ocean Sciences      Geophysical, Climatological and Anthropogenic Hazards and Disaster: Vulnerability, Risk Assessment, and Sustainability Shankar Karuppannan, Sandipan Das, Suresh Kumar, Uday Chatterjee, 2024-02-12 Nowadays the whole world faces frequent natural and anthropogenic hazards from drought to flood to deforestation which impends a large number of people into catastrophic destruction and damage Since natural hazards cannot be eliminated quantifying these events and creating reliable forecasts can alleviate their detrimental effects which can help build a more resilient and safe society This Research Topic will comply with the available knowledge of the multi hazards in response to monitoring and management and intends to fulfil the gap between science policy and the community concerned It also focuses on the use of precision techniques remote sensing and GIS technologies for the quantification of various natural and environmental hazards along with the capacity and sustainable mitigation strategies for resilient societies
