The Laws Of Nature

The Laws Of Nature:

Laws of Nature Peter Mittelstaedt, Paul A. Weingartner, 2005-07-06 This book is not a textbook to become acquainted with the laws of nature. An elementary knowledge about laws of nature in particular the laws of physics is presupposed. The book is rather intended to provide a clarification of concepts and properties of the laws of nature. The authors would like to emphasise that this book has been developed created as a real teamwork. Although the chapters and in some cases parts of the chapters were originally written by one of the two authors all of them were discussed thoroughly and in detail and have been revised and complemented afterwards. Even if both authors were in agreement on most of the foundational issues discussed in the book they did not feel it necessary to balance every viewpoint. Thus some individual and personal difference or emphasis will still be recognisable from the chapters written by the different authors. In this sense the authors feel specially responsible for the chapters as follows: Mittelstaedt for Chaps 4 9 3 10 11 2 12 13 and Weingartner for Chaps 1 2 3 5 7 8 2 9 2 9 4. The remaining parts are joint sections. Most of the chapters are formulated as questions and they begin with arguments pro and contra. Then a detailed answer is proposed which contains a systematic discussion of the question. This is the respective main part of the chapter. It sometimes begins with a survey of the problem by giving some important answers to it from history of Chaps 6 and 9.

the intertwined histories of natural law and the laws of nature in early modern Europe These notions became central to jurisprudence and natural philosophy in the seventeenth century the debates that informed developments in those fields drew heavily on theology and moral philosophy and vice versa Historians of science law philosophy and theology from Europe and North America here come together to address these central themes and to consider the question was the emergence of natural law both in European jurisprudence and natural philosophy merely a coincidence or did these disciplinary traditions develop within a common conceptual matrix in which theological philosophical and political arguments converged to make the analogy between legal and natural orders compelling This book will stimulate new debate in the areas of intellectual history and the history of philosophy as well as the natural and human sciences in general *Laws of Nature, Laws of God?* Louise Hickman, Neil Spurway, 2015-09-18 Up until the time of Newton scientists regarded the understandings of the physical world at which they were arriving as glimpses of the working of the Creator's mind Thus the generalisations being formulated about the behaviour of matter the Laws of Nature were seen as the Creator's injunctions to created matter as to how it was to act They were laws in the same sense as laws Divine or human about how people should behave that is why the same word was used for both And even now scientific laws are occasionally spoken of as being obeyed However it is doubtful whether any practising scientist religious believer or not now thinks of laws in the way that the word literally implies How instead scientists do or should view scientific laws has been debated since the time of Hume and Kant and it is a vigorous field of investigation among current philosophers of science In this book scientists physical and biological historians and students of ideas all of them theologically informed tackle this topic from many angles They do so in relation to the lead public lecture at the conference from which the book stems given by the eminent and iconoclastic philosopher of science Professor Nancy Cartwright She asked the question How could laws make things happen and her answer was They couldn't
