Renegotiating Disciplinary Fields in the Life Sciences Alessandro Minelli, 2021-02-24 Recent and ongoing debates in biology and the philosophy of biology reveal a widespread dissatisfaction with traditional explanatory frameworks There are also problems with the current definitions or circumscriptions of key concepts such as gene species and homology and even of whole disciplinary fields within the life sciences e.g. developmental biology These contrasting views are arguably a symptom of the need to revisit traditional unchallenged partitions between the specialist disciplines within the life sciences In the diversity of topics addressed and approaches to move beyond the current disciplinary organization the five essays in this volume will hopefully stimulate further exploration towards an improved articulation of life sciences

Undergraduate Mathematics for the Life Sciences Glenn Ledder, Jenna P. Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see

Education and Ethics in the Life Sciences Brian Rappert, 2010-06-01 At the start of the twenty first

century warnings have been raised in some quarters about how by intent or by mishap advances in biotechnology and related fields could aid the spread of disease Science academics medical organisations governments security analysts and others are among those that have sought to raise concern EDUCATION AND ETHICS IN THE LIFE SCIENCES examines a variety of attempts to bring greater awareness to security concerns associated with the life sciences It identifies lessons from practical initiatives across a wide range of national contexts as well as more general reflections about education and ethics The eighteen contributors bring together perspectives from a diverse range of fields including politics virology sociology ethics security studies microbiology and medicine as well as their experiences in universities think tanks and government In offering their assessment about what must be done and by whom each chapter addresses a host of challenging practical and conceptual questions EDUCATION AND ETHICS IN THE LIFE SCIENCES will be of interest to those planning and undertaking training activities in other areas In asking how education and ethics are being made to matter in an emerging area of social unease it will also be of interest to those with more general concerns about professional conduct

Research in the Life Sciences with Dual Use Potential Bibliotheca Alexandrina, National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Committee on Developing a Framework for an International Faculty Development Project on Education about Research in the Life Sciences with Dual Use Potential, 2012-05-26 In many countries colleges and universities are where the majority of innovative research is done in all cases they are where future scientists receive both their initial training and their initial introduction to the norms of scientific conduct regardless of their eventual career paths Thus institutions of higher education are particularly relevant to the tasks of education on research with dual use potential whether for faculty postdoctoral researchers graduate and undergraduate students or technical staff Research in the Life Sciences with Dual Use Potential describes the outcomes of the planning meeting for a two year project to develop a network of faculty who will be able to teach the challenges of research in the life sciences with dual use potential Faculty will be able to incorporate such concepts into their teaching and research through exposure to the tenets of responsible conduct of research in active learning teaching methods This report is intended to provide guidelines for that effort and to be applicable to any country wishing to adopt this educational model that combines principles of active learning and training with attention to norms of responsible science The potential audiences include a broad array of current and future scientists and the policymakers who develop laws and regulations around issues of dual use
