The Papers Of Joseph Henry Vol 9:

Mapping the Nation Susan Schulten, 2020-03-04 A compelling read that reveals how maps became informational tools charting everything from epidemics to slavery Journal of American History In the nineteenth century Americans began to use maps in radically new ways For the first time medical men mapped diseases to understand and prevent epidemics natural scientists mapped climate and rainfall to uncover weather patterns educators mapped the past to foster national loyalty among students and Northerners mapped slavery to assess the power of the South After the Civil War federal agencies embraced statistical and thematic mapping in order to profile the ethnic racial economic moral and physical attributes of a reunified nation By the end of the century Congress had authorized a national archive of maps an explicit recognition that old maps were not relics to be discarded but unique records of the nation's past All of these experiments involved the realization that maps were not just illustrations of data but visual tools that were uniquely equipped to convey complex ideas and information In Mapping the Nation Susan Schulten charts how maps of epidemic disease slavery census statistics the environment and the past demonstrated the analytical potential of cartography and in the process transformed the very meaning of a map Today statistical and thematic maps are so ubiquitous that we take for granted that data will be arranged cartographically Whether for urban planning public health marketing or political strategy maps have become everyday tools of social organization governance and economics The world we inhabit saturated with maps and graphic information grew out of this sea change in spatial thought and representation in the nineteenth century when Americans learned to see Patronage, Practice, and the Culture of American Science Hugh themselves and their nation in new dimensions Richard Slotten, 1994-06-24 In this book Hugh Richard Slotten explores the institutional and cultural history of science in the United States The main focus is on the activities of Alexander Dallas Bache great grandson of Benjamin Franklin and the acknowledged chief of the American scientific community during the second third of the nineteenth century Bache played a central role in the organization and management of a number of key scientific institutions including the American Association for the Advancement of Science the Smithsonian Institution and the National Academy of Sciences But his dominance in these institutions was made possible through his control of an organization less well known today the United States Coast Survey which he superintended from 1843 until his death in 1867 Under Bache's command the Coast Survey became the central scientific institution in antebellum America Using richly detailed archival records Slotten pursues an analysis of Bache and the Coast Survey that illuminates important historiographic themes We gain a better understanding of the particular style of nineteenth century American science by examining the role of the Coast Survey as a source of patronage Perhaps most important this study explores the ways in which scientific knowledge and practice are embedded within local contexts Although Bache sought to use the Coast Survey to raise the status of American science partly by emulating European scientific elites his efforts also reflected the cultural and political values of antebellum America Slotten thus

analyzes the interrelationship between political culture patterns of patronage and the institutional practice of science in the The Papers of Joseph Henry ,1972 **United States** Humanities .1980 **Catalogue of Scientific Papers:** Supplementary volume. 1800-1883 Royal Society (Great Britain),1902 Catalogue of Scientific Papers (1800-1900): **Exchanging Objects** Catherine A. Supplementary volume. 1800-1883 Royal Society (Great Britain), 1902 Nichols, 2021-04-01 As an historical account of the exchange of duplicate specimens between anthropologists at the Smithsonian Institution and museums collectors and schools around the world in the late nineteenth century this book reveals connections between both well known museums and little known local institutions created through the exchange of museum objects It explores how anthropologists categorized some objects in their collections as duplicate specimens making them potential candidates for exchange This historical form of what museum professionals would now call deaccessioning considers the intellectual and technical requirement of classifying objects in museums and suggests that a deeper understanding of past museum practice can inform mission driven contemporary museum work William Stimpson and the Golden Age of American Natural History Ronald Scott Vasile, 2018-06-19 William Stimpson was at the forefront of the American natural history community in the latter half of the nineteenth century Stimpson displayed an early affinity for the sea and natural history and after completing an apprenticeship with famed naturalist Louis Agassiz he became one of the first professionally trained naturalists in the United States In 1852 twenty year old Stimpson was appointed naturalist of the United States North Pacific Exploring Expedition where he collected and classified hundreds of marine animals Upon his return he joined renowned naturalist Spencer F Baird at the Smithsonian Institution to create its department of invertebrate zoology He also founded and led the irreverent and fun loving Megatherium Club which included many notable naturalists In 1865 Stimpson focused on turning the Chicago Academy of Sciences into one of the largest and most important museums in the country Tragically the museum was destroyed in the Great Chicago Fire of 1871 and Stimpson died of tuberculosis soon after before he could restore his scientific legacy This first ever biography of William Stimpson situates his work in the context of his time As one of few to collaborate with both Agassiz and Baird Stimpson's life provides insight into the men who shaped a generation of naturalists the last before intense specialization caused naturalists to give way to biologists Historians of science and general readers interested in biographies science and history will enjoy this compelling biography

The Castle, Second Edition Richard Stamm, 2012-05-15 When visitors to the nation's capital embark on a day of museum visits at the National Mall the most striking building in their midst is undoubtedly the Smithsonian Castle Its iconic architecture has come to symbolize the Smithsonian Today the Castle is both central administration building for the entire Smithsonian Institution and the public doorway to all of its museums and galleries But in years past it housed the families of the head of the Smithsonian at the same time that it served as research offices for far flung explorations and as space for collections exhibition and restoration The newly designed second edition of The Castle explores the architectural details of

The Lost World of James Smithson Heather Ewing, 2010-12-15 In 1836 the United States government received a strange and unprecedented gift a bequest of 104 960 gold sovereigns then worth half a million dollars to establish a foundation in Washington for the increase and diffusion of knowledge among men The Smithsonian Institution as it would eventually be called grew into the largest museum and research complex in the world Yet it owes its existence to an Englishman who never set foot in the United States and who has remained a shadowy figure for more than a hundred and fifty years Smithson lived a restless life in the capitals of Europe during the turbulent years of the French Revolution and the Napoleonic Wars at one time he was trailed by the French secret police and later languished as a prisoner of war in Denmark for four long years Yet despite a certain a penchant for gambling and fine living he had by the time of his death in Paris in 1829 amassed a financial fortune and a wealth of scientific papers that he left to the new democracy America Spurned by his natural father and his country he would be acknowledged for his own achievements in the New World Drawing on unpublished diaries and letters from archives all over Europe and the United States Heather Ewing tells the full and compelling story for the first time revealing a life lived at the heart of the English Enlightenment and illuminating the mind that sparked the creation of Altered Sensations David Pantalony, 2009-09-18 Rudolph America s greatest museum Annotation ,1980-03-08 Koenig was one of the more prolific and colourful instrument makers in the renowned nineteenth century precision instrument trade of Paris Beginning his career as a violin maker in 1858 the young Prussian immigrant shifted his talents towards the growing field of acoustics Altered Sensations is a portrait of his vibrant atelier a place of construction commerce and experiment For over forty years it was also a popular meeting place for scientists artisans musicians and teachers Using archival and collection research from across North American and Europe David Pantalony has traced the material and social influences of this space on the development of modern acoustics In particular he has detailed the manner in which Koenig modified extended spread and challenged Hermann von Helmholtz s Sensations of Tone A large part of the research on Koenig comes from the actual products of his workshop which survive in museums and collections around the world The second section of Altered Sensations provides a Catalogue Raisonn of Koenig s entire line of instruments including their history details from specific examples locations and references in the literature This catalogue will serve as a practical guide for curators and researchers as well as a comprehensive overview of nineteenth century acoustical practice Annual Report - National Historical Publications and Records Commission United States. Numbers, David N. Livingstone, 2020-04-09 This volume in the highly respected Cambridge History of Science series is devoted to exploring the history of modern science using national transnational and global frames of reference Organized by topic and culture its essays by distinguished scholars offer the most comprehensive and up to date nondisciplinary history of modern science currently available Essays are grouped together in separate sections that represent larger regions Europe Africa the Middle East South Asia East and Southeast Asia the United States Canada Australia New Zealand Oceania and Latin America Each of these regional groupings ends with a separate essay reflecting on the analysis in the preceding chapters Intended to provide a balanced and inclusive treatment of the modern world contributors analyze the history of science not only in local national and regional contexts but also with respect to the circulation of knowledge tools methods people and artifacts across national borders Power Struggles Michael B. Schiffer, 2008 Laying the foundation for Thomas Edison the first electric generators were built in the 1830s the earliest commercial lighting systems before 1860 and the first commercial application of generator powered light in the early 1860s This book examines some of these early applications of Science and Christianity in Pulpit and Pew Ronald L. Numbers, 2007-09-10 As past president of both the History of Science Society and the American Society of Church History Ronald L Numbers is uniquely qualified to assess the historical relations between science and Christianity In this collection of his most recent essays he moves beyond the clich s of conflict and harmony to explore the tangled web of historical interactions involving scientific and religious beliefs In his lead essay he offers an unprecedented overview of the history of science and Christianity from the perspective of the ordinary people who filled the pews of churchesor loitered around outside Unlike the elite scientists and theologians on whom most historians have focused these vulgar Christians cared little about the discoveries of Copernicus Newton and Einstein Instead they worried about the causes of the diseases and disasters that directly affected their lives and about scientists preposterous attempts to trace human ancestry back to apes Far from dismissing opinion makers in the pulpit Numbers closely looks at two the most influential Protestant theologians in nineteenth century America Charles Hodge and William Henry Green Hodge after decades of struggling to harmonize Gods two revelations in nature and in the Biblein the end famously described Darwinism as atheism Green on the basis of his careful biblical studies concluded that Ussher s chronology was unreliable thus opening the door for Christian anthropologists to accommodate the subsequent discovery of human antiquity In Science without God Numbers traces the millennia long history of so called methodological naturalism the commitment to explaining the natural world without appeals to the supernatural By the early nineteenth century this practice was becoming the defining characteristic of science in the late twentieth century it became the central point of attack in the audacious attempt of intelligent designers to redefine science Numbers ends his reassessment by arguing that

although science has markedly changed the world we live in it has contributed less to secularizing it than many have claimed Taken together these accessible and authoritative essays form a perfect introduction to Christian attitudes towards science since the 17th century **Princeton Alumni Weekly**, 1975
