Periglacial and Paraglacial Processes and Environments Jasper Knight, Stephan Harrison, 2009

Periglacial and paraglacial environments located outside ice sheet margins but responding to similar climate forcings are key to identifying climate change effects upon the Earth system These environments are relicts of cold Earth processes and so are most sensitive to global warming Changes in the distribution and thickness of permafrost in continental interiors have implications for ecosystem and landscape stability Periglacial Alpine environments are experiencing increased rockfall and mass movement leading to rock glacier instability and sediment release to downstream rivers In turn these landscape effects impact on natural hazards and human activities in these sensitive and geologically transient environments

Gutierrez Elorza, 2005-12-29 During the past few decades climatic geomorphology has been substantially enlarged in knowledge thanks to numerous detailed investigations the application of a large number of techniques and the acquisition of abundant absolute dates The challenge of predicting the effects of the prophesied future global warming on morphogenetic processes and landforms has encouraged geomorphologists to study the Late Pleistocene and Holocene climatic changes from the geomorphological and geological record The advances achieved in the field of climatic geomorphology during the past years are reflected by the publication of several specific monographs about the different morphoclimatic zones The aim of this book is to provide an up to date general view of this branch of geomorphology
