Edgar Allan Poe, Eureka, and Scientific Imagination David N. Stamos,2017-02-28 Explores the science and creative process behind Poe s cosmological treatise In 1848 almost a year and a half before Edgar Allan Poe died at the age of forty his book Eureka was published In it he weaved together his scientific speculations about the universe with his own literary theory theology and philosophy of science Although Poe himself considered it to be his magnum opus Eureka has mostly been overlooked or underappreciated sometimes even to the point of being thought an elaborate hoax Remarkably however in Eureka Poe anticipated at least nine major theories and developments in twentieth century science including the Big Bang theory multiverse theory and the solution to Olbers

paradox In this book the first devoted specifically to Poe's science side David N Stamos a philosopher of science combines scientific background with analysis of Poe's life and work to highlight the creative and scientific achievements of this text He examines Poe's literary theory theology and intellectual development and then compares Poe's understanding of science with that of scientists and philosophers from his own time to the present Next Stamos pieces together and clarifies Poe's theory of scientific imagination which he then attempts to update and defend by providing numerous case studies of eureka moments in modern science and by seeking insights from comparative biography and psychology cognitive science neuroscience and evolution Edgar Allan Poe Eureka and Scientific Imagination is the most comprehensive treatment of Eureka that has yet been published It is staggeringly thorough in its analysis of Poe's book but it also shows how Poe's theories of cosmogony and cosmology ramify into his fiction and poetry especially the tales of ratiocination Stamos takes Eureka seriously and he does so with the empirical undergirding of vast amounts of scientific scholarship and literary criticism James M Hutchisson author of Poe [Science Units for Grades 9-12](#) Randy L. Decolonizing Science David S. Jacobs, 2025-04-24 Science denial is on the rise globally Part of the reason for this is that science falsely portrayed as a solely European invention alienates most of the world This book traces the historical development of science and shows how its history and philosophy were shaped by Europe's colonial agenda Racial and gendered prejudices were converted into scientific concepts and the history of human civilization was repurposed to portray science as a European invention In the process it was ancient Greek scholars like Thales and Euclid who were credited with the invention of modern science Abstract theorizing became a defining characteristic of science and human experience became non essential Biodiversity including human diversity was viewed as consisting of discrete non overlapping types As a consequence humanity was divided into a hierarchy of races and genders This view of the world is divorced from reality and the reason why modern science struggles to explain humanity intelligence and life Using a more realistic historical perspective the author argues that racial and gendered identities are not relevant to science or any other sphere of human endeavour Instead the author advocates for realism that will make science logically consistent inclusive humane and relevant
