The Imbeddings Of Three Manifold Groups:

Imbeddings of Three-Manifold Groups Francisco González-Acuña, Wilbur Carrington Whitten, 1992 This paper deals with the two broad questions of how 3 manifold groups imbed in one another and how such imbeddings relate to any corresponding lowercase Greek Π_1 injective maps In particular we are interested in 1 determining which 3 manifold groups are no cohopfian that is which 3 manifold groups imbed properly in themselves 2 determining the knot subgroups of a knot group and 3 determining when surgery on a knot K yields a lens or lens like space and the relationship of such a surgery to the knot subgroup structure of lowercase Greek Π_1 S^3 K Our work requires the formulation of a deformation theorem for lowercase Greek Π_1 injective maps between certain kinds of Haken manifolds and the development of some algebraic tools Asymptotic Forms of Whittaker's Confluent Hypergeometric Functions Arthur Erdélyi, Charles Andrew Swanson, 1957 **A Proof of the q -Macdonald-Morris Conjecture for BC_n** Kevin W. J. Kadell, 1994 Macdonald and Morris gave a series of constant term q conjectures associated with root systems Selberg evaluated a multivariable beta type integral which plays an important role in the theory of constant term identities associated with root systems K Aomoto recently gave a simple and elegant proof of a generalization of Selberg's integral Kadell extended this proof to treat Askey's conjectured q Selberg integral which was proved independently by Habsieger We use a constant term formulation of Aomoto's argument to treat the q Macdonald Morris conjecture for the root system BC_n We show how to obtain the required functional equations using only the q transportation theory for BC_n Completely Prime Maximal Ideals and Quantization William M. McGovern, 1994 Let $\mathfrak{g}$ be a complex simple Lie algebra of classical type $U(\mathfrak{g})$ its enveloping algebra We classify the completely prime maximal spectrum of $U(\mathfrak{g})$ We also construct some interesting algebra extensions of primitive quotients of $U(\mathfrak{g})$ and compute their Goldie ranks lengths as bimodules and characteristic cycles Finally we study the relevance of these algebras to D Vogan's program of quantizing covers of nilpotent orbits $\mathcal{O}$ in $\mathfrak{g}$ Elliptic Regularization and Partial Regularity for Motion by Mean Curvature Tom Ilmanen, 1994 We study Brakke's motion of varifolds by mean curvature in the special case that the initial surface is an integral cycle giving a new existence proof by mean of elliptic regularization Under a uniqueness hypothesis we obtain a weakly continuous family of currents solving Brakke's motion These currents remain within the corresponding level set motion by mean curvature as defined by Evans Spruck and Chen Giga Goto Now let T_0 be the reduced boundary of a bounded set of finite perimeter in R^n If the level set motion of the support of T_0 does not develop positive Lebesgue measure then there corresponds a unique integral n current T partial derivative boundary degree of a polynomial symbol T T_0 whose time slices form a unit density Brakke motion Using Brakke's regularity theorem T is smooth H

Enright-Shelton Theory and Vogan's Problem for Generalized Principal Series Brian D. Boe, David H. Collingwood, 1993 This book investigates the composition series of generalized principal series representations induced from a maximal cuspidal parabolic subgroup of a real reductive Lie group Boe and Collingwood study when such representations are multiplicity free Vogan's Problem 3 and the problem of describing their composition factors in closed form The results obtained are strikingly similar to those of Enright and Shelton for highest weight modules Connections with two different flag variety decompositions are discussed

Axiomization of Passage from 'Local' Structure to 'Global' Object Paul Feit, 1993 Requiring only familiarity with the terminology of categories this book will interest algebraic geometers and students studying schemes for the first time Feit translates the geometric intuition of local structure into a purely categorical format filling a gap at the foundations of algebraic geometry The main result is that given an initial category $\mathcal{C}$ of local objects and morphisms there is a canonical enlargement of $\mathcal{C}$ to a category $\mathcal{C}_{gl}$ which contains all global objects whose local structure derives from $\mathcal{C}$ and which is functorially equivalent to the traditional notion of global objects Using this approach Feit unifies definitions for numerous technical objects of algebraic geometry including schemes Tate's rigid analytic spaces and algebraic spaces

Duality for Actions and Coactions of Measured Groupoids on von Neumann Algebras Takehiko Yamanouchi, 1993 Through classification of compact abelian group actions on semifinite injective factors Jones and Takesaki introduced a notion of an action of a measured groupoid on a von Neumann algebra which was proven to be an important tool for such an analysis In this paper elaborating their definition the author introduces a new concept of a measured groupoid action that may fit more perfectly in the groupoid setting The author also considers a notion of a coaction of a measured groupoid by showing the existence of a canonical coproduct on every groupoid von Neumann algebra

Weak Type Estimates for Cesaro Sums of Jacobi Polynomial Series Sagun Chanillo, Benjamin Muckenhoupt, 1993 This work completely characterizes the behaviour of Cesaro means of any order of the Jacobi polynomials In particular pointwise estimates are derived for the Cesaro mean kernel Complete answers are given for the convergence almost everywhere of partial sums of Cesaro means of functions belonging to the critical L_p spaces This characterization is deduced from weak type estimates for the maximal partial sum operator The methods used are fairly general and should apply to other series of special functions
