The Methodology Of Pierre Duhem:

The Methodology of Pierre Duhem Armand Lowinger, 1941 **A Discourse on the Method** René

Descartes, 2008-04-17 In this work Descartes swept away all previous philosophical traditions and set out his radical new philosophy It begins with the famous proof of the existence of self cogito ergo sum then the deduction of the existence of God and ends with an account of the physical world and human and animal nature **A Fallibilist Social Methodology for**

Today's Institutional Problems John Wettersten, 2021-12-13 This book identifies and explains far ranging consequences for methodology as a consequence of the observation that all rationality is social and highlights the need for methodological reforms in publications and interactions among colleagues and research programs The idea that all rationality is social needs to be part and parcel of all social scientific theories which means that their content must be changed Sociology needs to study the impact of social rules economics must revise assumptions about how individual rationality impacts financial developments and cognitive psychology must include social dimensions In addition there is also a need for moral theories that explain how social standards of behavior can be improved in specific institutional contexts *The American*

Ecclesiastical Review Herman Joseph Heuser, 1941 *Ideas for a Hermeneutic Phenomenology of the Natural Sciences* J.J.

Kockelmans, 2012-12-06 This book is a methodical and systematic presentation of basic ontological issues that must be raised with respect to the meaning and function of natural science The ontological issues are discussed from a hermeneutic phenomenological point of view In addition the book contains critical discussions of basic themes raised by Carnap Hempel Stegmüller Kuhn Lakatos Hahn Popper van Fraassen Heelan and Kisiel One of the basic theses developed in the book is that logical epistemological and methodological issues pertinent to the natural sciences should be complemented by ontological issues that focus mainly on meaning and truth The book also contains one chapter on the implications of the ontological ideas presented for the history of the natural sciences **Routledge History of Philosophy Volume VIII** Richard

Kearney, 2003-12-23 Continental philosophy as it has emerged in the twentieth century is less a seamless fabric than a patchwork of diverse strands Phenomenology hermeneutics existentialism structuralism critical theory deconstruction these are some of the salient movements which have developed in continental Europe between 1900 and the 1990s though their influence is by no means confined to geographic location Continental thought has proved highly exportable circulating far beyond the frontiers of Europe to provoke strong responses in the intellectual world at large The fifteen articles in this volume outline and assess some of the issues and experiments of continental philosophy The first five span the twin movements of phenomenology and existentialism running from Husserl and Heidegger to Sartre Merleau-Ponty and Levinas Subsequent essays deal with specific currents of continental thought in such areas as science Marxism linguistics politics aesthetics feminism and hermeneutics A final chapter on postmodernism highlights the manner in which so many concerns of continental thought culminate in a radical anti-foundationalism This volume provides a broad scholarly introduction to this

period for students of philosophy and related disciplines as well as some original interpretations of these authors It includes a glossary of technical terms and a chronological tube of philosophical scientific and other cultural events

Reader's Guide to the History of Science Arne Hessenbruch, 2013-12-16 The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn

When Historiography Met Epistemology Stefano Bordoni, 2017-03-06 In When Historiography Met Epistemology Stefano Bordoni shows the emergence of sophisticated histories and philosophies of science in French speaking countries in the second half of the nineteenth century That process involved mathematicians scientists and philosophers and was deeply linked to other processes that transformed the cultural and material landscape of Europe In the literature the emergence of the history and philosophy of science is chronologically associated with the turn of the twentieth century the author points out that this meaningful starting point should be moved backwards Since the 1860s sophisticated histories of science and critical meta theoretical remarks on scientific practice began to compete with na ve historical reconstructions and dogmatic views on science

The Methodology of Economics Mark Blaug, 1992-07-31 This book is an examination of the nature of economic explanation The opening chapters introduce current thinking in the philosophy of science and review the literature on methodology Professor Blaug then turns to the troublesome question of the logical status of welfare economics giving the reader an understanding of the outstanding issues in the methodology of economics This is followed by a series of case studies of leading economic controversies which shows how controversies in economics may be illuminated by paying attention to questions of methodology A final chapter draws the strands together and gives the author's view of what is wrong with modern economics This book is a revised and updated edition of a classic work on the methodology of economics in which Professor Blaug develops his discussion of the latest developments in macroeconomics general equilibrium theory and international trade theory A new section on the rationality postulate is also added

Beyond the Contingent Kathleen A. Mulhern, 2011-06-13 In light of the contemporary struggle between science and faith Kathleen Mulhern's timely exploration of late nineteenth century neo Pascalian thought both recovers a lost perspective on the war between science and religion and offers a fruitful angle of study for twenty first century reflection As the science vs religion rancor reached its early fury at the turn of the century many devout French Catholic intellectuals struggled with the increasingly dogmatic spirit in both the Roman Catholic Church and the scientific community The dominant ideology of scientism within the intellectual establishment of the Third Republic 1870 1940 collided with a growing authoritarianism within the Church expressed in the 1893 papal encyclical Providentissimus Physicist Pierre Duhem philosopher Maurice Blondel and priest Lucien Laberthonniere rejected the Roman Catholic Church's Thomistic methodology and sought intellectual inspiration instead in

the philosophy of seventeenth century scientist mathematician philosopher and Christian apologist Blaise Pascal These neo Pascalians offered an alternative to the adversarial relationship between modern culture and orthodox Catholic faith but their ideas came to an abrupt and bitter conclusion when they ran afoul of Church authority The narrative and contribution of the neo Pascalians offers many insights and lessons that could helpfully inform the contemporary debates surrounding the dialogue between science and religion
