## **The Panama Paradox:**

**The Panama Paradox** Michael Wolfe, 1986-11-01      **Paradox in the Panama Canal Zone** Charles Frederick Reid, 1935      **The Power of Paradox** Deborah Schroeder-Saulnier, 2014-03-24 We are so often faced with apparent paradoxes: continuity and change, conservatism and progressiveness, predictability and chaos. In business, inherent tensions are mistakenly viewed as problems to be resolved once the correct answer is found. But when we consider only one direction, either A or B, we only see part of the picture. The strongest and most innovative solutions are frequently realized not through either/or decisionmaking but by pursuing two contrasting options at the same time. Taking readers through the same steps she's used to help Fortune 500 companies such as Scottrade, Georgia Pacific and Boeing, Deborah Schroeder Saulnier reveals a dynamic critical thinking process anyone can use to define the strategic tensions within his or her organization, identify the potential of seemingly conflicting options and develop action steps to maximize the benefits of each. Complete with examples of companies that achieved a competitive advantage with this breakthrough strategy, *The Power of Paradox* will help you face chronic challenges with confidence and uncover unexpected and infinitely better solutions.      **John Dewey and the Paradox of Liberal Reform** William Andrew Paringer, 1990-07-05 This book provides a fresh critique of John Dewey and the progressive tradition and warns against the superficial renaissance of Deweyan philosophy present in many of today's modern liberal educational reform movements. Challenging the four pillars of Dewey's pragmatism—science, nature, democracy, experience—Paringer argues for a critical or radical education praxis that more sensitively comes to grips with the difficulties of the nuclearized postmodern world.      *The Cradle of Humanity* Mark Maslin, 2017-01-18 Humans are rather weak when compared with many other animals. We are not particularly fast and have no natural weapons. Yet *Homo sapiens* currently number nearly 7.5 billion and are set to rise to nearly 10 billion by the middle of this century. We have influenced almost every part of the Earth system and as a consequence are changing the global environmental and evolutionary trajectory of the Earth. So how did we become the world's apex predator and take over the planet? Fundamental to our success is our intelligence, not only individually but more importantly collectively. But why did evolution favour the brainy ape? Given the calorific cost of running our large brains, not to mention the difficulties posed for childbirth, this bizarre adaptation must have given our ancestors a considerable advantage. In this book, Mark Maslin brings together the latest insights from hominin fossils and combines them with evidence of the changing landscape of the East African Rift Valley to show how all these factors led to selection pressures that favoured our ultrasocial brains. Astronomy, geology, climate and landscape all had a part to play in making East Africa the cradle of humanity and allowing us to dominate the planet.      **The South Atlantic** Gerold Wefer, Wolfgang H. Berger, Gerold Siedler, David J. Webb, 2012-12-06 The book presents results of recent projects in oceanography and marine geosciences, e.g. WOCE, JGOFS, PAGES ODP, regarding present and past circulation in the South Atlantic. The objective of the book is to integrate results from both oceanographic and geological studies. As the connecting

link between the Antarctic and the North Atlantic the South Atlantic plays a crucial role with regard to the heat budget of the North Atlantic and to the biogeochemical budget of the global ocean New results from studies of meridional water mass and heat transports are presented The central theme of geological investigations is the reconstruction of current and productivity systems in the South Atlantic during the late Quaternary [Paradoxes](#) , **Climate** Mark Maslin,2013-06-27 In this wide ranging Very Short Introduction to climate Mark Maslin considers all aspects of the global climate system exploring and explaining the different components that control climate on Earth He considers the processes that allow energy to reach the Earth and how it is redistributed around the planet by the ocean atmosphere system the relationship and differences between climate and the weather how climate has affected life on Earth and human settlements and the cyclic and quasi cyclic features of climate such as the Milankovitch cycles and El Nino He concludes by touching on the issue of climate change and outlines some of the approaches that are now being taken to tackle it ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable **Encyclopedia of Paleoclimatology and Ancient Environments** Vivien Gornitz,2008-10-31 One of Springer s Major Reference Works this book gives the reader a truly global perspective It is the first major reference work in its field Paleoclimate topics covered in the encyclopedia give the reader the capability to place the observations of recent global warming in the context of longer term natural climate fluctuations Significant elements of the encyclopedia include recent developments in paleoclimate modeling paleo ocean circulation as well as the influence of geological processes and biological feedbacks on global climate change The encyclopedia gives the reader an entry point into the literature on these and many other groundbreaking topics [Merchant Vessels of the United States](#) ,1978 From 1894 95 1935 36 pt 6 of each volume is issued separately with titles 1894 95 1902 03 Code list of merchant vessels of the United States 1903 04 1935 36 Seagoing vessels of the United States [The Sea Floor](#) Eugen Seibold,Wolfgang Berger,2017-05-29 This textbook deals with the most important items in Marine Geology including some pioneer work The list of topics has grown greatly in the last few decades beyond the items identified by Eugen Seibold as central and now includes prominently such things as methane and climate change that is the carbon cycle and the Earth system as a whole Relevant geophysical geochemical sedimentological and paleontological methods are shortly described They should allow the reader to comment on new results about plate tectonics marine sedimentation from the coasts to the deep sea climatological aspects paleoceanology and the use of the sea floor The text tries to transmit to the reader excitement of marine geological research both aboard and in modern laboratories Basic mineralogical geochemical biological and other relevant data and a detailed list of books and symposia are given in an Appendix This Introduction builds on the third edition of The Sea Floor by E Seibold and W H Berger While much of the original text was written by Seibold a

considerable portion of the material presented in this edition is new taking into account the recent great shift in marine geological research some of it with great relevance to human concerns arising in a rapidly changing world      **Catalog of Copyright Entries.
