The Pathogenesis Of Colorectal Cancer:

The Pathogenesis of Colorectal Cancer Basil Clifford Morson, 1978 *Colorectal Cancer* Helmut K. Seitz, Ulrich A. Simanowski, Nicholas A. Wright, 2012-12-06 The past 20 years have seen a surge of research into colorectal cancer which is a reflection of the need to improve our methods of treating patients suffering from this increasingly common form of cancer. Greater knowledge of the basic mechanisms involved in colorectal carcinogenesis is an essential prerequisite to improvements in cancer prevention. In this volume the editors have brought together an impressive list of experts to cover the epidemiology, pathophysiology, morphology and basis for new diagnostic and therapeutic approaches to early detection and prevention. This broad scientific approach provides the reader with up to date review of our current state of knowledge of colorectal carcinogenesis and indicates how this information can be used to generate more research and create new opportunities for diagnosis and treatment. This is a book of knowledge and ideas, some of them still at the stage of theoretical interest but others with practical potential for the care of patients. I recommend it to those who have a research interest in colorectal carcinogenesis as well as to readers who wish to know just how far medical scientists have progressed in their efforts to achieve the ideal of cancer prevention.

Focus on Colorectal Cancer Research Julia D. Martinez, 2005 In Western countries cancer of the large intestine and rectum, colorectal cancer, is the second most common type of cancer and the second leading cause of cancer death after lung cancer. The incidence of colorectal cancer begins to rise at age 40 and peaks between ages 60 and 75. Cancer of the large intestine (colon cancer) is more common in women, rectal cancer is more common in men. About 5 percent of the people with colon or rectal cancer have more than one cancer of the colorectum at the same time. People with a family history of colon cancer have a higher risk of developing the cancer themselves. A family history of familial polyposis or a similar disease also increases the risk of colon cancer. People with ulcerative colitis or Crohn's disease have a higher risk of developing cancer. The risk is related to the person's age when the condition developed and the length of time the person has had the condition. Diet plays some role in the risk of colon cancer but exactly how it affects risk is unknown. Throughout the world people at highest risk tend to live in cities and eat a diet typical of affluent Westerners. Such a diet is low in fibre and high in animal protein, fats and refined carbohydrates such as sugar. Risk seems to be reduced by a diet high in calcium, vitamin D and vegetables such as brussels sprouts, cabbage and broccoli.

Molecular Pathogenesis of Colorectal Cancer Kevin M. Haigis, Ph.D., 2013-10-02 Colorectal cancer has for more than two decades served as the paradigm for the multi-step concept of cancer initiation and progression. Perhaps more than any other organ site, cancer of the colon is extensively characterized at the molecular level. We are now entering a time when molecular classification rather than histologic classification of cancer subtypes is driving the development of clinical trials with emerging targeted therapies. The book will focus on the progression from the identification of mutations that drive colorectal cancer initiation and progression to the search for novel therapies to treat the disease.

Haigis,2013-10-31 Colorectal Cancer Luis Rodrigo,2016-09-07 Colorectal cancer CRC is a major health problem because it represents around 10% of all cancers and achieves a worldwide estimate of 1 4 million newly diagnosed cases annually resulting in approximately 700 000 deaths Approximately 19 31% of patients present liver metastases At diagnosis a further 23 38% will develop extra hepatic disease Over the past decade the widespread use of modern chemotherapeutic and biological agents combined with laparoscopic surgical techniques has improved the prognosis of metastatic CRC A better understanding of the biology of the tumor along with high efficiency of diagnostic and therapeutic methods as well as the spread of screening programs will improve the survival of the CRC patients in the near future **Future Perspectives in Gastroenterology** Martin C.
