Sun S.S. Hasan, R. J. Rutten, 2010-03-10 Solar physics in India has a tradition that can be traced to the setting up of the Kodaikanal Observatory in 1899 when the Madras Observatory was relocated to a high altitude site with a view to initiate observations of the sun This conference on Magnetic Coupling between the Interior and the Atmosphere of the Sun during 25 December 2008 was planned to coincide with centenary of the Evershed effect discovery at Kodaikanal in 1909 The aim of this meeting was to bring to a critical focus a comprehensive understanding of the important issues pertaining to solar magnetism with particular emphasis on the various MHD processes that operate in the solar atmosphere The current status of magnetic field measurements and their implications in the light of recent theories and numerical modeling that address the fundamental scales and processes in the highly magnetized turbulent plasma were reviewed during this meeting The meeting was timely for the following reasons Space observations such as from SOHO and TRACE have provided a wealth of multiwavelength observations on processes occurring in regions of the atmosphere extending from the photosphere up to the outer corona With the launch of Hinode and STEREO in 2006 and of SDO Solar Dynamics Observatory shortly this conference provided a platform for in depth discussions on new results from various space missions as well as a comparison with ground based observing facilities such as the Swedish 1 m Solar Telescope Using sophisticated image processing techniques such as telescopes routinely generate observations with a resolution better than 0.1 arcsec thereby yielding more informative diagnostics for instance of the microstructure of flux tubes Progress, 1889 **The Clinical Science of Neurologic Rehabilitation**

Bruce H. Dobkin, 2003 The Second Edition of this single authored volume integrates multiple disciplines of basic and clinical research to help clinicians further develop the best possible care for the rehabilitation of patients with neurologic diseases From the readable descriptions of the structures and functions of pathways for movement and cognition the reader comes to understand the potential for training induced pharmacologic and near future biologic interventions to enhance recovery Dr Dobkin shows how functional neuroimaging serves as a marker for whether physical cognitive and neuromodulating therapies work and how they sculpt the plasticity of the brain Themes such as how the manipulation of sensory experience can serve as a formidable tool for rehabilitation run throughout the text built from the level of the synapse to behaviors such as grasping walking and thinking From illustrating how we may one day repair the brain and spinal cord to how to retrain spared and new pathways Dr Dobkin draws insights from a broad swath of fundamental research to give clinicians tools they

can translate into bedside practices The book treats the medical complications and therapeutic approaches to neurologic diseases as an interconnected matrix The management of common medical issues impairments and disabilities are described across diseases Special problems posed by patients with stroke myelopathies brain injury multiple sclerosis degenerative diseases and motor unit disorders receive individual comment Short term and delayed pulse interventions for patients along with clinical trials are dissected and put into perspective The First Edition of this book was titled Neurologic Rehabilitation The title has been changed to reflect Dr Dobkin s sense that fundamental research now drives the field of neurologic rehabilitation even more than it could in 1996 when the First Edition was published The Second Edition features entirely new chapters on functional neuroimaging of recovery neurostimulators and neuroprostheses integration into the book of many new clinical and neuroscientific observations relevant to the clinician and extensive updating and expansion of all chapters Readers whether clinicians serving the rehabilitation team or students or researchers in neuroscience neurology physical medicine allied health or bioengineering will acquire new insights and tools for creative pursuits that aim to lessen the disabilities of patients
