The Hungry Planet The Modern World At The Edge Of Famine:

The Hungry Planet Georg Borgstrom,1965 *The Hungry Planet* Georg Borgstrom,1972 *The Modern World at the Edge of Famine* **The Hungry planet** George J. Borjas,1967 *Leashing the Dogs of War* Chester A. Crocker,Fen Osler Hampson,Pamela R. Aall,2007 The definitive volume on the sources of contemporary conflict and the array of possible responses to it *The Political Economy of Gunnar Myrdal* Örjan Appelqvist,2013-11-26 The intellectual trajectory of Gunnar Myrdal Swedish Nobel Laureate economist sociologist and politician brings us through many of the major issues in the world economy and politics of the 20th century This new volume explores Myrdal s work on three major themes breaking away from conventional assumptions in Political Economy and highlighting flaws that can still be found in today s teachings on Political Economy finding ways of re creating Europe after WW II including the discussions between liberal Americans and European social democrats on how to create a more cooperative and socially just international order and understanding the impact or environmental concerns on growth and development starting with Myrdal s participation in the first UN Conference on Environment in Stockholm 1960 and continuing with his later writings What is then the relevance of these themes today In times when financial crisis threatens to block international and domestic economies when the European Union s promises of prosperity and cooperation seems to be severely threatened and when there is a large consensus that current modes of economic development are ecologically unsustainable can we find ways of transcending seemingly intractable dilemmas These questions will be discussed in the final part of the book **Integrating Ecology and Poverty Reduction** Jane Carter Ingram,Fabrice DeClerck,Cristina Rumbaitis del Rio,2012-02-15 In the past the science of ecology has frequently been excluded from the development agenda for various reasons Increasingly however there has been a renewed interest in finding more ecologically sustainable means of development that have required a strong foundation in ecological knowledge for example EcoAgriculture Partnerships EcoHealth presented at ESA and EcoNutrition proposed by Deckelbaum et al Each of these examples has already taken the critical first step at integrating ecological knowledge with agriculture health and nutrition respectively However this is only the first step more attention needs to be placed not only on the role that two fields can play towards poverty alleviation but on the role of a truly integrated interdisciplinary approach towards development goals that is firmly grounded in ecological understanding We feel that a critical look at what ecology can and cannot provide to the development agenda in light of the Millennium Development goals is timely and crucial The introduction and the final section of the book will then integrate the lessons and principles outlined in each of the chapters All chapter authors will be heavily encouraged to focus on how their sub discipline in ecology impacts overall human well being and environmental sustainability **The Metamorphosis of the Amazon** Maximilian Fritz Feichtner,2023-12-21 The Metamorphosis of the Amazon sheds new light on the complex history of the Ecuadorian rainforest revealing how oil development and its social and ecological repercussions triggered its metamorphosis When international oil giants such as

Shell and Texaco started to dig for oil in remote rainforest locations a process was born that eventually altered the fabric of the Amazon forever Oil infrastructure paved way for a disastrous industrial and agricultural landscape polluted by the hazardous waste management of the oil industry Adopting a unique approach Maximilian Feichtner does not recount the established narrative of oil companies vs suffering local communities he instead centers the rainforest ecosystem itself its rivers animals and climate conditions and the often neglected actors of this history the oilmen and their experiences as people affected by a pollution they perpetrated and witnessed This title is part of the Flip it Open Programme and may also be available Open Access Check our website Cambridge Core for details

The Struggle for the Long-Term in Transnational Science and Politics Jenny Andersson, Eglė Rindzevičiūtė, 2015-04-10 This book reconsiders the power of the idea of the future Bringing together perspectives from cultural history environmental history political history and the history of science it investigates how the future became a specific field of action in liberal democratic state socialist and post colonial regimes after the Second World War It highlights the emergence of new forms of predictive scientific expertise in this period and shows how such forms of expertise interacted with political systems of the Cold War world order as the future became the prism for dealing with post industrialisation technoscientific progress changing social values Cold War tensions and an emerging Third World A forgotten problem of cultural history the future re emerges in this volume as a fundamentally contested field in which forms of control and central forms of resistance met as different actors set out to colonise and control and others to liberate The individual studies of this book show how the West European African Romanian and Czechoslovak long term was constructed through forms of expertise computer simulations and models and they reveal how such constructions both opened up new realities but also imposed limits on possible futures

Introduction to Food Science and Technology George Stewart, 2012-12-02 Introduction to Food Science and Technology focuses on the importance of food science and food technology to humans This book discusses the total sequence of operations in food technology which includes the selection of raw materials processing preservation and distribution Comprised of nine chapters this monograph starts with an overview of the processing and storage of food This book examines how the food processor often controls the producer's operations by demanding a raw product of a certain type in order to satisfy a particular processing and consumer demand Other chapters consider the primary concern of food scientists and technologists in the processing and preservation of raw agricultural products as nutritious and stable foods of acceptable quality The final chapter deals with the variety of jobs available for those trained in the biological physical and behavioral sciences and their applications to food processing and food preservation Food technologists chemists and scientists will find this book extremely useful

The Politics of Hunger John W. Warnock, 2019-07-19 Originally published in 1987 This important and provocative book explains the persistence of hunger poverty and the lack of balanced development in many countries and the central role of agriculture in economic development Most theories of agricultural development are based

on the experiences of western Europe and the United States while the two models for successful late development have been Japan and the Soviet Union This book surveys the evolution of agriculture under colonialism in Latin America Africa and Asia and concludes that this long period distorted the development prospects for these areas and retarded the production of food Under strong state capitalist governments a few underdeveloped countries have broken the colonial patterns of development However other post revolutionary societies are having far less success because of economic blockades and outside military intervention While the primary focus of the book is on the short run problems of inequality the author examines the long run ecological and resource constraints to a sustainable food system and raising the standard of living in the underdeveloped world
