The Life Of Ernst Chain Penicillin And Beyond:

The Life of Ernst Chain Ronald Clark,2011-10-28 A Jew who left Germany when Hitler came to power Sir Ernst Chain was a winner with Sir Alexander Fleming and Lord Florey of the Nobel Prize for Physiology and Medicine in 1945 Later he was a significant figure in the use of the semi synthetic penicillins which from the mid 1950s onwards revolutionized the use of the anti biotic in more than one field of medicine Born in Berlin in 1906 of a Russian emigre father and a German mother Chain left Germany for England on 30 January 1933 Working first with Sir Frederick Gowland Hopkins in Cambridge then with Professor Howard Florey in Oxford Chain studied the biochemical processes by which bacteriolytic agents operate Writing up his results he studied Fleming s neglected original report of the bacteria inhibiting properties of penicillin and with Florey s support embarked on a major investigation of how penicillin could be made and purified **The Life of Ernst Chain** Ronald William Clark,1985-01-01 Traces the life of Chain a German born scientist who fled Nazi Germany for England and describes his contributions to the development of penicillin contributions which led to a Nobel Prize *The Mystery of Life What'S It All About?* David E. Peeples,2018-03-15 Have you ever seriously considered the most difficult and puzzling questions presented to our minds during this mortal sojourn through an often difficult and challenging existence Who am I Where did I come from Why am I here Where am I going And perhaps the most important question of all What is my purpose for living In this ultra modern digital world of today many people have become so preoccupied with the daily pursuits of life and the addictive overuse of time consuming technology that many of them rarely pause to seriously consider what life is actually all about In writing *The Mystery of Life* it has been my hope and my goal to personally challenge each reader to consider many relevant facts and to follow a line of evidence pointing toward a worldview that is often overlooked and too easily marginalized We live in an aggressive technology driven world where the wild pursuit of power prestige possession and pleasure has become the driving influence ruling over many of our lives What does your worldview look like Is there enough evidence to support it beyond reasonable doubt If not then I invite you to consider a vast body of mounting evidence that could lead toward a more accurate discernment of an often confusing existence The view of life that we have each come to know will strongly influence everything we do say and become in this world Based on a remarkable consensus of evidence perhaps we should consider a worldview understanding that will ultimately avail our hearts and minds of the personal fulfillment and satisfaction we have always longed for and often dreamed of We owe it to ourselves to seriously consider where the evidence is leading us Isn't it about time to discover the answers to our most persistent and pressing questions *The Mystery of Life* is presented as a literary expose addressing the questions of origin meaning morality and destiny

Objections to Evolution Nirushan Sivanesan,2023-05-11 The theory of evolution as proposed by Charles Darwin in 1859 has been plagued by controversy and criticisms since its inception But in the Western world at least the fight seems to be almost over with evolution being seen by many as a sealed deal The theory has made its way into science textbooks and has firmly lodged itself there Could this be the biggest mistake the scientific community has ever made Objections to Evolution addresses this question It reexamines the evidence for evolution and brings forth a new case against it from a nonreligious perspective This case contains completely unique and thought provoking ideas arguments and theories It asks and answers fundamental questions which have not been addressed previously and attempts to create a revolution in the way we think about our origins

The Evolution of Drug Discovery Enrique Ravina,2011-04-18 The discovery and use of medicines is just as fascinating a human scientific endeavor as space flight or the tracing of human evolution It is also the everyday task of hundreds of thousands of pharmacists pharmaceutical chemists and researchers worldwide Based on his profound knowledge of past and present paradigms in the development of medicines Enrique Ravina takes the reader from the very beginnings of pharmacology to the multibillion dollar business it represents today Recounting the often spectacular successes and failures of innovative drugs as well as the people who discovered them he brings abstract science to life in anecdotal form For anyone with a more than superficial interest in the science of drugs and all those interested in knowing how drugs have been developed how they have reached us and became part of our daily life This book is beautifully illustrated containing many rare and historical photographs of drugs and their discoverers and abounds with references to the primary literature listing seminal publications alongside more modern reviews for readers seeking further details With a Foreword by Hugo Kubinyi

Smallpox, Syphilis and Salvation Sheryl Persson,2010-04 Since ancient times the search for cures for the great scourges that have afflicted humankind has been an ongoing quest but it is only within the last 200 years that major breakthroughs have occurred and the development of modern medicine has accelerated The stories behind these miraculous cures are those of intense rivalries and jealousies bitter public humiliation unswerving dedication subterfuge and great personal struggles Often these medical advances have truly changed the world When Edward Jenner developed the concept of vaccination and with it the cure for smallpox he found a way to defeat a disease that had affected half a billion people more than all those affected by wars and other epidemics combined And while the Black Death still lingers in pockets around the world it no longer threatens to destroy entire civilisations as it once did SMALLPOX SYPHILIS AND SALVATION uncovers the compelling stories of the men and women innovations and accidents that have led to diseases from polio to syphilis diphtheria to diabetes tetanus to leukaemia no longer being the death sentences they once were It also sounds a note of warning for some of these diseases are fighting back It is estimated that tuberculosis now claims one life every fifteen

Answering the New Atheists: How Science Points to God and to the Benefits of Christianity Anthony Walsh,2019-01-30 In the face of increasing attacks on Christianity by militant new atheists Christians should be able to robustly defend their beliefs in the language spoken by Christianity s detractors science Atheists claim that science and religion are incompatible and in constant conflict but this book argues that this is assuredly not true In order to rebut the polemic agenda of the new atheists who want God banned from the public square this book engages with the physical and natural sciences social science philosophy and history It shows that evidence from these diverse disciplines constitutes clear signposts to God and the benefits of Christianity for societies families and individuals Answering the New Atheists begins by examining what new

atheism is before demolishing its claim that Christianity is harmful by showing the many benefits it has for freedom and democracy morality longevity and physical and mental health Many historians of science contend that science was given its impetus by the Christian principle that a rational God wants us to discover his fingerprints on nature Thus in subsequent chapters Walsh presents a well informed and philosophical based analysis of the Big Bang and cosmic fine tuning the unimaginable improbability of factors that make this planet habitable and the multiverse often called the last refuge of the desperate atheist Interdisciplinary in its approach this book adeptly explores the very problematic issues of the origin and evolution of life that have forced many top rate scientists including Nobel Prize winners who have thought deeply about the philosophical meaning of their work to accept God as the Creator of everything
