Environmental Impacts & Risks of Deep-Sea Mining: Recommendations for Exploitation Regulations Ana Colaço, Marina R. Cunha, Annemiek Vink, Lenaick Menot, Miguel Caetano, Matthias Haeckel, 2025-09-24 After more than 20 years mining of mineral resources such as polymetallic nodules and massive sulfides in the deep sea is back on the agenda of many countries and companies in their quest for metals for the energy transition and high tech products In this course the past 10 years have seen an immense increase of exploration licenses issued by the International Seabed Authority ISA which administers and controls activities at the ocean floor beyond national jurisdiction generally termed the Area The seven pilot investors have renewed their exploration licenses in the Clarion Clipperton Zone CCZ for another five year term after which they will need to apply for an exploitation license or return their contracted claim Thus ISA is currently developing the regulatory framework for the exploitation of seafloor mineral resources which includes amongst several other issues legislation to ensure effective protection of the marine environment from harmful effects according to UNCLOS article 145 In order to support decision making for ISA s regulations the European project MiningImpact funded through the Joint Programming Initiative Healthy and Productive Seas and Oceans JPIO has carried out extensive environmental research in the eastern exploration license areas for polymetallic nodules in the CCZ At the heart of the project were two research cruises which established the environmental baselines in the German and Belgian license areas of the CCZ and independently monitored the first test of an industrial prototype nodule collector vehicle conducted by the Belgian company DEME GSR The monitoring program focused on studying the direct impacts in the trial areas and the dispersal and redeposition of the suspended sediment plume Topics covered during the monitoring included habitat characterization natural variability disturbance effects temporal evolution faunal communities and the development of techniques for rapid biodiversity assessment The MiningImpact project also initiated a restoration experiment with artificial hard substrates which aims at exploring the possibility to enable and accelerate the recolonization of areas affected by mining

The Late Triassic World Lawrence H. Tanner, 2017-11-16 This volume presents the latest science on all significant geological and paleontological aspects of the Earth during the Late Triassic Period Rather than presenting a collection of narrowly focused research papers the volume consists of a series of peer reviewed chapters on specific aspects of the Late Triassic world e g tectonics magmatism paleobotany climate etc all authored by experts in the subject of their respective chapters Each chapter reviews and summarizes the latest findings in these fields and also includes a review of the pertinent literature The author list is very broadly international and forms a veritable who s who of expertise in these fields The book is loosely organized to present the physical aspects of Earth during

the Late Triassic at the outset followed by the paleontological aspects The latter section is further organized to present the record of the marine environment first before moving onto land with fauna followed by flora The volume closes with a review of the end Triassic extinctions BARRONS ACT STUDY GUIDE.
