Catholic Neurotheology Andrew Newberg, Mary Clare Smith, 2024-07-02 The topic of neurotheology has garnered increasing attention in the academic religious scientific and popular worlds It is the field of study that explores the intersection between the brain and religious and spiritual phenomena However there have been no extensive attempts at exploring specifically how Catholic religious thought and experience may intersect with neurotheology The purpose of Catholic Neurotheology is to fully engage this groundbreaking area Topics are related to a neurotheological approach to the foundational Catholic beliefs derived from Scripture and Tradition an exploration of the various elements of Catholicism and of Catholic rituals and practices and a review of Catholic spiritualities and mysticism Specific Catholic scholars are considered in terms of the relationships among their ideas teachings and different brain processes Catholic Neurotheology engages these topics in an easy to read style and incorporates scientific religious philosophical and theological aspects of the emerging field of neurotheology By reviewing the concepts in a stepwise simple yet thorough discussion readers regardless of their background will be able to understand the complexities and breadth of neurotheology from a Catholic perspective More broadly issues include a review of the neurosciences and neuroscientific techniques religious and spiritual experiences theological development and analysis liturgy and ritual philosophy epistemology and ethics and social implications all from a Catholic perspective

Religion and the Body, 2012-02-17 This book reflects on the implications of neurobiology and the scientific worldview on aspects of religious experience belief and practice focusing especially on the body and the construction of religious meaning

Albright,Mladen Turk,2017-11-06 Since the dawn of science ideas about the relation between science and religion have always depended on what else is going on in a society During the twentieth century daily life changed dramatically Technology revolutionized transportation agriculture communications and housework People came to rely on scientific predictability in their technology Many wondered whether God s supposed actions were consistent with scientific knowledge The twenty first century is bringing new scientific research capabilities They are revealing that scientific results are not totally predictable after all Certain types of interaction lead to outcomes that are unpredictable in principle These in turn may lead to a whole new range of potential interactions They do not rule out the reality of a dynamic God who can act in the world without breaking the known principles of science God may in fact work with the way things really are Human experience of God may accurately reflect this reality Interactive World Interactive God illustrates such new understandings in religion and science by describing recent developments in a wide range of sciences and providing theological commentary The book is written for intelligent readers who may not be specialized in science but who are looking for ways to understand divine action in today s world Commun(ica)ting Bodies Anna-Katharina
