The reproduction and

development of sharks, skates, rays and ratfishes Leo S. Demski, John P. Wourms, 2013-06-29 This volume had its origin in a symposium on the Reproduction and Development of Cartilaginous Fishes that was held at the annual meetings of the American Elasmobranch Society and the American Society of Ichthyologists and Herpetologists in Charleston South Carolina in 1990 The cartilaginous fishes class Chondrichthyes are a large and diverse group of fishes that include approximately 900 to 1100 living species of sharks skates rays and ratfishes Throughout their history which dates back at least 400 million years they have been a successful major component of the marine ecosystem The chondrichthyan fishes occupy a pivotal position in comparative and evolutionary studies of vertebrate reproduction and development They are the oldest surviving group of jawed vertebrates and they possess both the adult vertebrate Bauplan and the vertebrate program of embryonic development The major features of the female reproductive system including its embryonic origin structure physiological function and biochemistry apparently were established early in vertebrate evolution and are fully developed in chondrichthyan fishes These features of the female reproductive system have been retained during the evolution of the other classes of vertebrates Much the same can be said for the male reproductive system Moreover viviparity placental nourishment of developing embryos and the hormonal regulation of these events made an initial appearance in this group The 22 articles presented in this volume bring together a wide variety of complementary research by investigators from seven countries allowing us to broaden the scope and implications of our studies while identifying opportunities for future research The appearance of a volume on the reproduction and development of cartilaginous fishes is quite opportune The continued existence of these fishes which survived the great extinction events of Earth's history is now threatened by overexploitation unless immediate steps for their conservation are undertaken Knowledge of their reproduction and development not only is an end in itself but is of critical importance in devising successful conservation and resource management strategies **Sharks** United States. Air Force. Combat Crew Training Wing, 3636th. Environmental Information Division, 1974 *Sharks* Gene Helfman, George H. Burgess, 2014-05-15 Do sharks lay eggs or give birth to live young Do sharks sleep How long do they live How likely are shark attacks This book answers your questions about some of nature's most misunderstood animals Answering every conceivable question about sharks authors Gene Helfman and George H Burgess describe the fascinating biology behavior diversity there are more than 1 000 species worldwide and cultural importance of sharks their close relationship to skates and rays and their critical role in healthy ecosystems Helfman and Burgess take readers on a round the world tour of shark habitats which include oceans as well as lakes and even rivers as far up the Mississippi as St Louis They describe huge ferocious predators like Great White and Tiger sharks and species such as Basking and Whale sharks that feed on microscopic prey yet can grow to lengths of more than 40 feet The mysterious and powerful Greenland shark the authors explain reaches a weight of 2 200 pounds on a diet of seal flesh Small less than 2 foot long Cookiecutter sharks attack other sharks and even take a chunk out of the occasional swimmer Despite our natural fascination with sharks we have become

their worst enemy Many shark species are in serious decline and a number are threatened with extinction as a result of overfishing and persecution Sharks The Animal Answer Guide presents a perfect mix of current science history anthropology intriguing facts and gripping photographs Whether your fascination with sharks stems from fear or curiosity your knowledge of these animals will improve immensely when you consult this book **In the Name of Sharks** François

Sarano,2023-10-17 Twenty metres below water the oceanographer Fran ois Sarano came face to face with a five and a half metre great white shark Seduced by the gentle elegance of this majestic creature Sarano experienced a profound sense of affinity with her as they swam side by side shoulder to shoulder eye to eye cutting a single figure through the ocean depths It was an experience which made him realize the depth of our ignorance of the lives of sharks leading him to become a passionate advocate for their protection Drawing on the latest scientific research on the biology and ethology of sharks and their exceptional characteristics this book aims to break through the barrier of prejudice and to pay homage to their true nature Representing a last vestige of wildness their populations are nevertheless under threat like so many species they have been hunted and exploited by humans Sarano argues for a change of mindset in which we lose ourselves in the world of the other so that each living entity human and non human can take their rightful place in the broader global ecosystem Also available as an audiobook
