The Life Sciences in Eighteenth-century French Thought Jacques Roger, 1997 Available for the first time in English Roger's masterwork of intellectual history situates the life sciences within the larger context of French Enlightenment thought and the history of institutions

Evolutionism in Eighteenth-century French Thought Mary Efrosini Gregory, 2008 This book examines how eighteenth century French theorists Maillet Montesquieu La Mettrie Buffon Maupertuis Diderot Rousseau and Voltaire addressed evolutionism Each thinker laid down a building block that would eventually open the door to the mutability of species and a departure from the long held belief that the chain of beings is fixed This book describes how the philosophes established a triune relationship among contemporary scientific discoveries random creationism propelled by the motive and conscious properties of matter and the notion of the chain of being along with its corollaries plenitude and continuity Also addressed is the contemporary debate over whether apes could ever be taught to speak as well as the issue of race and the family of man

Languages of Science in the Eighteenth Century Britt-Louise Gunnarsson, 2011-10-28 The eighteenth century is an important period both in the history of science and in the history of languages Interest in science and especially in the useful sciences exploded and a new modern approach to scientific discovery and the accumulation of knowledge emerged It was during this century too that ideas on language and language practice began to change Latin had been more or less the only written language used for scientific purposes but gradually the vernaculars became established as fully acceptable alternatives for scientific writing The period is of interest moreover from a genre historical point of view Encyclopedias dictionaries and also correspondence played a key role in the spread of scientific ideas At the time writing on scientific matters was not as distinct from fiction poetry or religious texts as it is today a fact which also gave a creative liberty to individual writers In this volume seventeen authors explore from a variety of angles the construction of a scientific language and discourse The chapters are thematically organized into four sections each contributing to our understanding of this dynamic period in the history of science their themes are the forming of scientific communities the emergence of new languages of science the spread of scientific ideas and the development of scientific writing A particular focus is placed on the Swedish botanist Carl Linnaeus 1707-1778 From the point of view of the natural sciences Linnaeus is renowned for his principles for defining genera and species of organisms and his creation of a uniform system for naming them From the standpoint of this volume however he is also of interest as an example of a European scientist of the eighteenth century This volume is unique both in its broad linguistic approach including studies on textlinguistics stylistics sociolinguistics lexicon and nomenclature and in its combination of language studies philosophy of language history and sociology of science The book covers writing in different European languages Swedish German French

English Latin Portuguese and Russian With its focus on the history of scientific language and discourse during a dynamic period in Europe the book promises to contribute to new insights both for readers interested in language history and those with an interest in the history of ideas and thought **The Life Sciences in Early Modern Philosophy** Ohad

Nachtomy, Justin E. H. Smith, 2013-12-04 The present volume advances a recent historiographical turn towards the intersection of early modern philosophy and the life sciences by bringing together many of its leading scholars to present the contributions of important but often neglected figures such as Ralph Cudworth Nehemiah Grew Francis Glisson Hieronymus Fabricius ab Aquapendente Georg Ernst Stahl Juan Gallego de la Serna Nicholas Hartsoeker Henry More as well as more familiar figures such as Descartes Spinoza Leibniz Malebranche and Kant The contributions to this volume are organized in accordance with the particular problems that living beings and living nature posed for early modern philosophy the problem of life in general whether it constitutes something ontologically distinct at all or whether it can ultimately be exhaustively comprehended in the same manner as the rest the problem of the structure of living beings by which we understand not just bare anatomy but also physiological processes such as irritability motion digestion and so on the problem of generation which might be included alongside digestion and other vital processes were it not for the fact that it presented such an exceptional riddle to philosophers since antiquity namely the riddle of coming into being out of apparent or real non being and finally the problem of natural order The Cambridge History of Eighteenth-century Philosophy Knud Haakonssen, 2006

This two volume set presents a comprehensive and up to date history of eighteenth century philosophy The subject is treated systematically by topic not by individual thinker school or movement thus enabling a much more historically nuanced picture of the period to be painted The Quantification of Life and Health from the Sixteenth to the Nineteenth Century Simone

Guidi, Joaquim Braga, 2023-11-10 This edited volume explores the intersection of medicine and philosophy throughout history calling attention to the role of quantification in understanding the medical body Retracing current trends and debates to examine the quantification of the body throughout the early modern modern and early contemporary age the authors contextualise important issues of both medical and philosophical significance with chapters focusing on the quantification of temperaments and fluids complexions functions of the living body embryology and the impact of quantified reasoning on the concepts of health and illness With insights spanning from the sixteenth century to the nineteenth century this book provides a wide ranging overview of attempts to quantify the human body at various points Arguing that medicine and philosophy have been constantly in dialogue with each other the authors discuss how this provided a strategic opportunity both for medical thought and philosophy to refine and further develop Given today's fascination with the quantification of the body represented by the growing profusion of self tracking devices logging one's sleep diet or mood this collection offers an important and timely contribution to an emerging and interdisciplinary field of study The Cambridge Companion to the French Enlightenment Daniel Brewer, 2014-10-30 Containing essays by leading scholars representing a wide range of

disciplines this Companion offers new perspectives on the French Enlightenment Clearly organized and easy to use the volume provides a comprehensive overview of a period that marks the beginning of modern intellectual culture and political life *TIME OF ENLIGHTENMENT;THE TIME OF ENLIGHTENMENT*,2020 **Shakespeare and the Eighteenth**

Century Peter Sabor,Paul Yachnin,2016-12-05 In 1700 Shakespeare was viewed as one of the leading Renaissance playwrights but not as supreme By 1800 he was not only widely performed and read but celebrated as a universal genius and a national literary hero What happened during the intervening years is the subject of this fascinating volume which brings together Renaissance and eighteenth century scholars who examine how Shakespeare gradually penetrated and came to dominate the culture and intellectual life of people in the English speaking world The contributors approach Shakespeare from a wide range of perspectives to illuminate the way contemporary philosophy science and medicine textual practice theatre studies and literature both informed and were influenced by eighteenth century interpretations of his works Among the topics are Falstaff and eighteenth century ideas of the sublime David Garrick s 1756 adaptation of The Winter s Tale and its relationship to medical theories of femininity the textual practices of George Steevens Shakespeare s importance in furthering the careers of actors on the eighteenth century stage and the influence of Shakespeare on writers as diverse as Edmund Burke Horace Walpole and Ann Radcliff Together the essays paint a vivid picture of the relationship between eighteenth century Shakespeare and ideas about shared nationhood knowledge morality history and the self **Eating the**

Enlightenment E.C. Spary,2013-04-08 Eating the Enlightenment offers a new perspective on the history of food looking at writings about cuisine diet and food chemistry as a key to larger debates over the state of the nation in Old Regime France Embracing a wide range of authors and scientific or medical practitioners from physicians and poets to philosophes and playwrights E C Spary demonstrates how public discussions of eating and drinking were used to articulate concerns about the state of civilization versus that of nature about the effects of consumption upon the identities of individuals and nations and about the proper form and practice of scholarship En route Spary devotes extensive attention to the manufacture trade and eating of foods focusing upon coffee and liqueurs in particular and also considers controversies over specific issues such as the chemistry of digestion and the nature of alcohol Familiar figures such as Fontenelle Diderot and Rousseau appear alongside little known individuals from the margins of the world of letters the draughts playing caf owner Charles Manoury the Turkish envoy Soliman Aga and the natural philosopher Jacques Gautier d Agoty Equally entertaining and enlightening Eating the Enlightenment will be an original contribution to discussions of the dissemination of knowledge and the nature of scientific authority **The Physiocrats and the World of the Enlightenment** Liana Vardi,2012-03-19 Offers a framework for understanding physiocratic theory and the development of modern economics

Lamarckism and the Emergence of 'Scientific' Social Sciences in Nineteenth-Century Britain and France Snait

B. Gissis,2024-04-09 The book presents an original synthesizing framework on the relations between the biological and the social Within these relations the late nineteenth century emergence of social sciences aspiring to be constituted as autonomous as scientific disciplines is described analyzed and explained Through this framework the author points to conceptual and constructive commonalities conjoining significant founding figures Lamarck Spencer Hughlings Jackson Ribot Durkheim Freud who were not grouped nor analyzed in this manner before Thus the book offers a rather unique synthesis of the interactions of the social the mental and the evolutionary biological Spencerian Lamarckism and or Neo Lamarckism crystallizing into novel fields It adds substantially to the understanding of the complexities of evolutionary debates during the last quarter of the nineteenth century It will attract the attention of a wide spectrum of specialists academics and postgraduates in European history of the nineteenth century history and philosophy of science and history of biology and of the social sciences including psychology *Kant and the Transformation of Natural History* Andrew Cooper,2023 Andrew Cooper presents the first systematic study of Kant s account of natural history Cooper contends that Kant made a decisive contribution to one of the most explosive and understudied revolutions in the history of science the addition of time to the frame in which explanations are required sought and justified in natural science Through addressing a wide range of Kant s works Cooper challenges the claim that Kant s theory of science denies a developmental conception of nature and argues instead that it establishes a method by which natural historians can genuinely dispute historical claims and potentially come to consensus This method Cooper argues can be used to expose serious flaws in Kant s own historical reasoning including the formation and defence of his racist views The book will be valuable to philosophers seeking to discern both the power and limitations of Kant s theory of science and to historians of science working on the fractured landscape of eighteenth century Newtonianism When Science & Christianity Meet David C. Lindenberg,Ronald L. Numbers,2024-05-31 This book in language accessible to the general reader investigates twelve of the most notorious most interesting and most instructive episodes involving the interaction between science and Christianity aiming to tell each story in its historical specificity and local particularity Among the events treated in *When Science and Christianity Meet* are the Galileo affair the seventeenth century clockwork universe Noah s ark and flood in the development of natural history struggles over Darwinian evolution debates about the origin of the human species and the Scopes trial Readers will be introduced to St Augustine Roger Bacon Pope Urban VIII Isaac Newton Pierre Simon de Laplace Carl Linnaeus Charles Darwin T H Huxley Sigmund Freud and many other participants in the historical drama of science and Christianity Taken together these papers provide a comprehensive survey of current thinking on key issues in the relationships between science and religion pitched as the editors intended at just the right level to appeal to students Peter J Bowler Isis Mind, Body, Motion, Matter Mary Helen McMurran,Alison Conway,2016-01-01 *Mind Body Motion Matter* investigates the relationship between the eighteenth century s two predominant approaches to the natural world mechanistic materialism and vitalism in the works of leading British and

French writers such as Daniel Defoe William Hogarth Laurence Sterne the third Earl of Shaftesbury and Denis Diderot Focusing on embodied experience and the materialization of thought in poetry novels art and religion the literary scholars in this collection offer new and intriguing readings of these canonical authors Informed by contemporary currents such as new materialism cognitive studies media theory and post secularism their essays demonstrate the volatility of the core ideas opened up by materialism and the possibilities of an aesthetic vitalism of form *The Nature of Nature* Bruce Gordon, William Dembski, 2014-04-29 The intellectual and cultural battles now raging over theism and atheism conservatism and secular progressivism dualism and monism realism and antirealism and transcendent reality versus material reality extend even into the scientific disciplines This stunning new volume captures this titanic clash of worldviews among those who have thought most deeply about the nature of science and of the universe itself Unmatched in its breadth and scope *The Nature of Nature* brings together some of the most influential scientists scholars and public intellectuals including three Nobel laureates across a wide spectrum of disciplines and schools of thought Here they grapple with a perennial question that has been made all the more pressing by recent advances in the natural sciences Is the fundamental explanatory principle of the universe life and self conscious awareness to be found in inanimate matter or immaterial mind The answers found in this book have profound implications for what it means to do science what it means to be human and what the future holds for all of us *Vitalizing Nature in the Enlightenment* Peter H. Reill, 2005-06-06 This far reaching study redraws the intellectual map of the Enlightenment and boldly reassesses the legacy of that highly influential period for us today Peter Hanns Reill argues that in the middle of the eighteenth century a major shift occurred in the way Enlightenment thinkers conceived of nature that caused many of them to reject the prevailing doctrine of mechanism and turn to a vitalistic model to account for phenomena in natural history the life sciences and chemistry As he traces the ramifications of this new way of thinking through time and across disciplines Reill provocatively complicates our understanding of the way key Enlightenment thinkers viewed nature His sophisticated analysis ultimately questions postmodern narratives that have assumed a monolithic Enlightenment characterized by the dominance of instrumental reason that has led to many of the disasters of modern life

The Invention of Humanity Siep Stuurman, 2017-02-20 For much of history strangers were seen as barbarians seldom as fellow human beings The notion of common humanity had to be invented Drawing on global thinkers Siep Stuurman traces ideas of equality and difference across continents and civilizations from antiquity to present day debates about human rights and the clash of civilizations
