Small Area Estimation Methods And Applications:

Robust Small Area Estimation Jiming Jiang,J. Sunil Rao,2025-08-20 In recent years there has been substantial and growing interest in small area estimation SAE that is largely driven by practical demands Here the term small area typically refers to a subpopulation or domain of interest for which a reliable direct estimate based only on the domain specific sample cannot be produced due to small sample size in the domain Keywords in SAE are borrowing strength Because there are insufficient samples from the small areas to produce reliable direct estimates statistical methods are sought to utilize other sources of information to do better than the direct estimates A typical way of borrowing strength is via statistical modelling On the other hand there is no free lunch Yes one can do better by borrowing strength but there is a cost This is the main topic discussed in this text Features A comprehensive account of methods applications as well as some open problems related to robust SAE Methods illustrated by worked examples and case studies using real data Discusses some advanced topics including benchmarking Bayesian approaches machine learning methods missing data and classified mixed model prediction Supplemented with code and data via a website Robust Small Area Estimation Methods Applications and Open Problems is primarily aimed at researchers and graduate students of statistics and data science and would also be suitable for geography and survey methodology researchers The practical approach should help persuade practitioners such as those in government agencies to more readily adopt robust SAE methods It could be used to teach a graduate level course to students with a background in mathematical statistics

[Spatial Econometric Methods in Agricultural Economics Using R](#) Paolo Postiglione, Roberto Benedetti, Federica Piersimoni, 2021-12-22 Modern tools such as GIS and remote sensing are increasingly used in the monitoring of agricultural resources The developments in GIS technology offer growing opportunities to agricultural economics analysts dealing with large and detailed spatial databases allowing them to combine spatial information from different sources and to produce different models The availability of these valuable sources of information makes the advanced models suggested in the spatial statistic and econometric literature applicable to agricultural economics This book aims at supporting stakeholders to design spatial surveys for agricultural data

and or to analyse the geographically collected data This book attempts to describe the main typology of agricultural data and the most appropriate methods for the analysis together with a detailed description of the available data sources and their collection methods Topics such as spatial interpolation point patterns spatial autocorrelation survey data analysis small area estimation regional data modelling and spatial econometrics techniques are covered jointly with issues arising from the integration of several data types The theory of spatial methods is complemented by real and or simulated examples implemented through the open source software R
