Small Gtpases And Their Regulators Part B Rho Family:

Small GTPases and Their Regulators Part B, 1995 **Regulators and Effectors of Small GTPases: Ras Family**, 2006-06-07 The Ras superfamily 150 human members encompasses Ras GTPases involved in cell proliferation Rho GTPases involved in regulating the cytoskeleton Rab GTPases involved in membrane targeting fusion and a group of GTPases including Sar1 Arf Arl and dynamin involved in vesicle budding fission These GTPases act as molecular switches and their activities are controlled by a large number of regulatory molecules that affect either GTP loading guanine nucleotide exchange factors or GEFs or GTP hydrolysis GTPase activating proteins or GAPs In their active state they interact with a continually increasing functionally complex array of downstream effectors Since the last Methods in Enzymology volume on this topic in 2000 the study of Ras Family GTPases has witnessed a plethora of new directions and trends With regards to the founding member of the Ras superfamily the study of Ras in oncogenesis has seen the development and application of more advanced model cell culture and animal systems The discovery of mutationally activated B Raf in human cancers has injected renewed interest in this classical effector pathway of Ras Includes a database for Ras family proteins and their effectors and regulators Complimentary to volume 406 coverage of the Rho family Over 150 international contributors Regulators and Effectors of Small GTPases, Part E: GTPases Involved in Vesicular Traffic, 2001-02-08 Small GTPases play a key role in many aspects of contemporary cell biology control of cell growth and differentiation regulation of cell adhesion and cell movement the organization of the actin cytoskeleton and the regulation of intracellular vesicular transport This volume and its companions Volumes 255 256 257 and the forthcoming 325 cover all biochemical and biological assays currently in use for analyzing the role of small GTPases in these aspects of cell biology at the molecular level Regulators of G Protein Signaling, Part A, 2004-11-25 Regulators of G Protein Signaling Part A is an in depth treatment of G Protein Signaling and will cover general methods of analysis of RGS protein analysis including Expression and post translational modification Assays of GAP activity and allosteric control Electrophysiological methods and RGS insensitive Ga subunits Mouse models of RGS protein action Methods of RGS protein inhibition and G protein regulators of model organisms Table of Contents Expression and post translational modification Assays of GAP activity and allosteric control Electrophysiological methods and RGS insensitive Ga subunits Mouse Models of RGS protein action Methods of RGS protein inhibition G protein regulators of model organisms **DNA Microarrays, Part A: Array Platforms and Wet-Bench Protocols**, 2011-08-19 Modern DNA microarray technologies have evolved over the past 25 years to the point where it is now possible to take many million measurements from a single experiment These two volumes Parts A B in the Methods in Enzymology series provide methods that will shepherd any molecular biologist through the process of planning performing and publishing microarray results Part A starts with an overview of a number of microarray platforms both commercial and academically produced and includes wet bench protocols for performing traditional expression analysis and derivative techniques such as detection of transcription

factor occupancy and chromatin status Wet bench protocols and troubleshooting techniques continue into Part B These techniques are well rooted in traditional molecular biology and while they require traditional care a researcher that can reproducibly generate beautiful Northern or Southern blots should have no difficulty generating beautiful array hybridizations Data management is a more recent problem for most biologists The bulk of Part B provides a range of techniques for data handling This includes critical issues from normalization within and between arrays to uploading your results to the public repositories for array data and how to integrate data from multiple sources There are chapters in Part B for both the debutant and the expert bioinformatician Provides an overview of platforms Includes experimental design and wet bench protocols Presents statistical and data analysis methods array databases data visualization and meta analysis
