*The SAGE Handbook of Media Processes and Effects* Robin L. Nabi, Mary Beth Oliver, 2009-09-11 The study of media processes and effects is one of the most central to the discipline of communication and encompasses a vast array of theoretical perspectives, methodological tools and applications to important social contexts. In light of this importance as well as the rapid changes in the media environment that have occurred during the past 20 years, this Handbook explores where media effects research has been over the past several decades and equally important, contemplates where it should go in the years ahead. COVERAGE Part I offers an overview of the field and conceptualizations of media effects along with a range of quantitative and qualitative methodologies used in the study of media effects. Part II focuses on prominent theoretical approaches to the study of media effects from a more societal perspective, tracing their historical contexts, theoretical developments, criticisms and controversies, and the impact of the new media environment on current and future research. Part III emphasizes the various factors that influence the critical functions of message selection and processing central to a host of mass media application contexts. Part IV reflects a dominant trend in the media effects literature, that of persuasion and learning, and traces related theoretical perspectives through the various contexts in which media may have such effects. Part V explores the contexts and audiences that have been traditional foci of media effects research, such as children, violence, body image and race, addressing the theories most applicable to those contexts. Part VI highlights a concern central and unique to the communication discipline, message medium and how it influences effects, ranging from what messages are attended to, how we spend our time and even how we think.

Microbial Resolution Gloria Chan-Sook Kim, 2024-06-18 An interdisciplinary study charting the war against microbial futures leads to a new theory of contemporary vision and visuality. In 1989, a group of U.S. government scientists met to discuss some surprising findings: new diseases were appearing around the world and viruses that they thought long vanquished were resurfacing. Their appearance heralded a future perpetually threatened by unforeseeable biological risks, sparking a new concept of disease: the emerging microbe. With the Cold War nearing its end, American scientists and security experts turned to confront this new enemy, redirecting national security against its risky horizons. In order to be fought, emerging microbes first needed to be made perceptible, but how could something immaterial, unknowable and ever mutating be coaxed into visibility, knowability and operability? *Microbial Resolution* charts the U.S. led war on the emerging microbe to show how their uncertain futures were transformed into objects of global science and security. Moving beyond familiar accounts that link scientific knowledge production to optical practices of visualizing the invisible, Gloria Chan-Sook Kim develops a theory of microbial resolution to analyze the complex problematic that arises when dealing with these entities: what can be seen when there is nothing to see? Through a syncretic analysis of data mining, animal tracking technologies, media networks, computer modeled futures and global ecologies and

infrastructures she shows how a visual impasse the impossibility of seeing microbial futures forms the basis for new modes of perceiving knowing and governing in the present Timely and thought provoking *Microbial Resolution* opens up the rich paradoxes irreconcilabilities and failures inherent in this project and demonstrates how these tensions profoundly animate twenty first century epistemologies aesthetics affects and ecologies *Games in Everyday Life* Nathan Hulse, 2019-11-25 In this book Nathan Hulse explores the links between game design surveillance computation and the emerging technologies that impact our everyday lives at home at work and with our family and friends **Handbook of Cultural Sociology** Laura Grindstaff, John R. **Media and New Capitalism in the Digital Age** E. Fisher,2010-03-15 This book explores the new terrain of network capitalism through the transformations of the discourse on technology Rather than viewing such discourse as either a true or false reflection of reality Fisher evaluates the ideological role that technology discourse plays in the legitimation of a new form of capitalism Based on an extensive empirical analysis the book argues that contemporary technology discourse at one and the same time promises more personal empowerment through network technology and legitimates a more privatized flexible and precarious economic constellations Such discourse signals a new tradeoff in the political culture of capitalism from a legitimation discourse which emphasizes the capacity of technology and technique to bring about social emancipation through equality stability and security to a legitimation discourse which focuses on the capacity of technology to bring about individual emancipation through individual empowerment authenticity creativity and cooperation Contrary to the prevailing assumption that sees network technology as liberating from the rigidity and pitfalls of a stifling Fordist capitalism the book offers a theoretical framework which sees contemporary technology discourse as an ideology that legitimates the economic social and political arrangements of the new capitalism
