Towards Verified Systems J. Bowen, 2013-10-22 As the complexity of embedded computer controlled systems increases the present industrial practice for their development gives cause for concern especially for safety critical applications where human lives are at stake The use of software in such systems has increased enormously in the last decade Formal methods based on firm mathematical foundations provide one means to help with reducing the risk of introducing errors during specification and development There is currently much interest in both academic and industrial circles concerning the issues involved but the techniques still need further investigation and promulgation to make their widespread use a reality This book presents results of research into techniques to aid the formal verification of mixed hardware software systems Aspects of system specification and verification from requirements down to the underlying hardware are addressed with particular regard to real time issues The work presented is largely based around the Occam programming language and Transputer microprocessor paradigm The HOL theorem prover based on higher order logic has mainly been used in the application of machine checked proofs The book describes research work undertaken on the collaborative UK DTI SERC funded Information Engineering Dictorate Safemos project The partners were Inmos Ltd Cambridge SRI the Oxford University Computing Laboratory and the University of Cambridge Computer Laboratory who investigated the problems of formally verifying embedded systems The most important results of the project are presented in the form of a series of interrelated chapters by project members and associated personnel In addition overviews of two other ventures with similar objectives are included as appendices The material in this book is intended for computing science researchers and advanced industrial practitioners interested in the application of formal methods to real time safety critical systems at all levels of abstraction from requirements to hardware In addition material of

a more general nature is presented which may be of interest to managers in charge of projects applying formal methods especially for safety critical systems and others who are considering their use International Atomic Energy Agency Publications: Catalogue International Atomic Energy Agency,1986 **Verification and Validation of Software Related to Nuclear Power Plant Instrumentation and Control** International Atomic Energy Agency,1999 This report provides practical guidance on the methods available for verification of the software and validation of computer based systems in nuclear power plants and on how and when these methods can be effectively applied It will be of particular interest to all those involved in the development implementation maintenance and use of software and computer based instrumentation and control systems in nuclear power plants **The Operating Organization and the Recruitment, Training and Qualification of Personnel for Research Reactors** IAEA,2023-05-22 This Safety Guide provides recommendations on the operating organization and on personnel for research reactors to meet the relevant requirements of IAEA Safety Standards Series No SSR 3 Safety of Research Reactors It covers the typical operating organization for research reactor facilities the recruitment process and qualification in terms of education training and experience programmes for initial and continuing training the authorization process for those individuals having an immediate bearing on safety and the processes for their requalification and reauthorization This Safety Guide is a revision of IAEA Safety Standards Series No NS G 4 5 which it supersedes **Core Management and Fuel Handling for Research Reactors** IAEA,2023-04-28 This Safety Guide provides specific recommendations on core management and fuel handling for research reactors including handling and storage of fresh fuel irradiated fuel core components and neutron sources to meet the relevant requirements of IAEA Safety Standards Series No SSR 3 Safety of Research Reactors The recommendations in this publication are intended for use by operating organizations of research reactors regulatory bodies and other relevant organizations involved in a research reactor project This Safety Guide is a revision of IAEA Safety Standards Series No NS G 4 3 which it supersedes **Commissioning of Research Reactors** IAEA,2023-04-19 This Safety Guide provides specific recommendations on establishing a programme and organization for commissioning of research reactors to meet the relevant requirements of IAEA Safety Standards Series No SSR 3 Safety of Research Reactors It covers the commissioning stages procedures reports and documentation and provides guidance for commissioning of new experimental devices and modifications The recommendations in this publication are intended for use by operating organizations of research reactors regulatory bodies and other relevant organizations involved in a research reactor project This Safety Guide is a revision of IAEA Safety Standards Series No NS G 4 1 which it supersedes **Nuclear Power** Pavel Tsvetkov,2010-08-17 The world of the twenty first century is an energy consuming society Due to increasing population and living standards each year the world requires more energy and new efficient systems for delivering it Furthermore the new systems must be inherently safe and environmentally benign These realities of today s world are among the reasons that lead to serious interest in deploying
