Estrella, 2007

Abstract Summary Frequent occurrence of software project failures has created two general streams of research One theme analyzed the common causes of cost overruns late schedules and unmet scope With the belief that project failures are avoidable through proactive means another group of researchers investigated software project risks With such intent comparative studies were conducted in Finland Hong Kong and the United States Subsequent research in Nigeria determined the impact of the socioeconomic context To further extend the coverage of prior studies the research in the current study focused specifically on the Canadian financial services sector Project managers were solicited for input to discover determine and rank risk factors in software projects using the same research design that was used in previous comparative research studies a three phase Delphi survey that uses nonparametric statistical techniques In sharp contrast to prior studies however this research aimed not for general applications of the results at the country level but for specific collective relevance to software projects in banks trust companies insurance companies mutual fund companies and similar organizations The composite rankings of the studies in Hong Kong Finland and the United States listed lack of management commitment inability to get user commitment and misunderstanding of the requirements as the top three risk items in software projects Given that only the misunderstanding of requirements made it into the top three risk items in Nigeria it would be of value to scholars and practitioners to determine how the results would differ if the study was conducted in a specific sector in the industry Except for one risk factor lack of dedicated full time project resources this study confirmed that the previous list of risk factors captured the top risk factors in the Canadian financial services sector

Medical Instrument Design and Development Claudio Becchetti, Alessandro Neri, 2013-05-20 This book explains all of the stages involved in developing medical devices from concept to medical approval including system engineering bioinstrumentation design signal processing electronics software and ICT with Cloud and e Health development Medical Instrument Design and Development offers a comprehensive theoretical background with extensive use of diagrams graphics and tables around 400 throughout the book The book explains how the theory is translated into industrial medical products using a market sold Electrocardiograph disclosed in its design by the Gamma Cardio Soft manufacturer The sequence of the chapters reflects the product development lifecycle Each chapter is focused on a specific University course and is divided into two sections theory and implementation The theory sections explain the main concepts and principles which remain valid across technological evolutions of medical instrumentation The Implementation sections show how the theory is translated into a medical product The Electrocardiograph ECG or EKG is used as an example as it is a suitable device to explore to fully understand medical instrumentation since it is sufficiently simple but encompasses all the main areas involved in developing medical electronic equipment Key Features Introduces a system level approach to product design Covers topics such as bioinstrumentation signal processing information theory electronics software firmware telemedicine e Health and medical device certification Explains how to use theory to implement a market product using ECG as an example Examines the design and applications of

main medical instruments Details the additional know how required for product implementation business context system design project management intellectual property rights product life cycle etc Includes an accompanying website with the design of the certified ECG product <http://www.gammacardiosoft.it/book> Discloses the details of a marketed ECG Product from GammaCardio Soft compliant with the ANSI standard AAMI EC 11 under open licenses GNU GPL Creative Common This book is written for biomedical engineering courses upper level undergraduate and graduate students and for engineers interested in medical instrumentation device design with a comprehensive and interdisciplinary system perspective
