Information Systems Alan Hevner, Samir Chatterjee, 2010-06-14 It is 5 years since the publication of the seminal paper on Design Science in Information Systems Research by Hevner March Park and Ram in MIS Quarterly and the initiation of the Information Technology and Systems department of the Communications of AIS These events in 2004 are markers in the move of design science to the forefront of information systems research A sufficient interval has elapsed since then to allow assessment of from where the field has come and where it should go Design science research and behavioral science research started as dual tracks when IS was a young field By the 1990s the influx of behavioral scientists started to dominate the number of design scientists and the field moved in that direction By the early 2000s design people were having difficulty publishing in mainline IS journals and in being tenured in many universities Yes an annual Workshop on Information

Technology and Systems WITS was established in 1991 in conjunction with the International Conference on Information Systems ICIS and grew each year. But that was the extent of design science recognition. Fortunately, a revival is underway. By 2009, when this foreword was written, the fourth DESRIST conference has been held and plans are afoot for the 2010 meeting. Design scientists regained respect and recognition in many venues where they previously had little. *Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations for 1999: Testimony of members of Congress and other interested individuals and organizations*. History of Nordic Computing 2 John Impagliazzo, Timo Järvi, Petri Paju, 2009-09-19. The First Conference on the History of Nordic Computing HiNC1 was organized in Trondheim in June 2003. The HiNC1 event focused on the early years of computing, that is, the years from the 1940s through the 1960s, although it formally extended to year 1985. In the preface of the proceedings of HiNC1, Janis Bubenko Jr, John Impagliazzo, and Arne Sølvberg describe well the peculiarities of early Nordic computing. While developing hardware was a necessity for the first professionals, quite soon the computer became an industrial product. Computer scientists, among others, grew increasingly interested in programming and application software. Progress in these areas from the 1960s to the 1980s was experienced as astonishing. The developments during these decades were taken as the focus of HiNC2. During those decades, computers arrived to every branch of large and medium-sized businesses, and the users of the computer systems were no longer only computer specialists but also people with other main duties. Compared to the early years of computing before 1960, where the number of computer projects and applications was small, capturing a holistic view of the history between the 1960s and the 1980s is considerably more difficult. The HiNC2 conference attempted to help in this endeavor.

Software Maintenance - A Management Perspective Phaneendra Nath Vellanky, 2007-10-23. Computer systems play an important role in our society. Software drives those systems. Massive investments of time and resources are made in developing and implementing these systems. Maintenance is inevitable. It is hard and costly. Considerable resources are required to keep the systems active and dependable. We cannot maintain software unless maintainability characteristics are built into the products and processes. There is an urgent need to reinforce software development practices based on quality and reliability principles. Though maintenance is a mini-development lifecycle, it has its own problems. Maintenance issues need corresponding tools and techniques to address them. Software professionals are key players in maintenance. While development is an art and science, maintenance is a craft. We need to develop maintenance personnel to master this craft. Technology impact is very high in the systems world today. We can no longer conduct business in the way we did before. That calls for reengineering systems and software. Even reengineered software needs maintenance soon after its implementation. We have to take business knowledge, procedures, and data into the newly reengineered world. Software maintenance people can play an important role in this migration process. Software technology is moving into global and distributed networking.
