Soils and Quaternary Geology of the Southwestern United States David L. Weide, Marianne L. Faber, 1985

**Geomorphology of Desert Environments** Anthony J. Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth's land surface experiences a desert climate and this area supports approximately 15% of the planet's population. This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology. Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards. This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically. It begins with an overview of global deserts, proceeds through treatments of weathering, hillslopes, rivers, piedmonts, lake basins, and aeolian surfaces, and concludes with a discussion of the role of climatic change. Written by a team of international authors, all of whom are active in the field, the chapters cover the spectrum of desert geomorphology.

**Geological Criteria for Evaluating Seismicity Revisited** Franck A. Audemard M., Alessandro Maria Michetti, James McCalpin, 2011 Geological Survey Bulletin, 1987 **Hot Deserts** M. J. Walker, 2012 This volume provides an authoritative and comprehensive state-of-the-art review of hot desert terrains in all parts of the world, their geomaterials, and influence on civil engineering site investigation, design, and construction. It primarily covers conditions and materials in modern hot deserts, but there is also coverage of unmodified ancient desert soils that exhibit engineering behaviour similar to modern desert materials. Thorough and up-to-date guidance on modern field evaluation and ground investigation techniques in hot arid areas is provided, including reference to a new approach to the desert model and detailed specialised assessments of the latest methods for materials characterisation and testing. The volume is based on world-wide experience in hot desert terrain and draws upon the knowledge and expertise of the members of a Geological Society Engineering Group Working Party comprising practising geologists, geomorphologists, and civil engineers with a wealth of varied but complementary experience of working in hot deserts. It is an essential reference book for professionals as well as a valuable textbook for students. It is written in a style that is accessible to the non-specialist. A comprehensive glossary is also included. The Geological Society of London, founded in 1807, is the oldest geological society in the world and one of the largest publishers in the Earth sciences. The Society publishes a wide range of high-quality peer-reviewed titles for academics and professionals working in the geosciences and enjoys an enviable international reputation for the quality of its work. **Soil Geomorphology** A. J. Gerrard, 1992-10-31 Soil geomorphology is the accurate assessment of the genetic relationship of soils and landforms, which is possible only if their interdependence is recognized. This book provides an integration of geomorphology and pedology. Students and scientists in many disciplines should find this book highly relevant to their interests. **Assessment of Regional Earthquake Hazards and Risk Along the Wasatch Front, Utah**, 1984. Chapters A-J are issued as a single volume and are not available separately. *Assessment of Regional Earthquake*

*Hazards and Risk Along the Wasatch Front, Utah* Paula Gori, Walter W. Hays, 1992 Chapters A J are issued as a single volume and are not available separately

Geomorphology of Desert Environments A. D. Abrahams, A. Parsons, 2013-04-17 Over the last twenty years there has been a major expansion of knowledge in the field of landforms and landforming processes of deserts This advanced level book provides a benchmark for the current state of science and is written by an international team of authors who are acknowledged experts in their fields

**U.S. Geological Survey Bulletin** ,1983 *Semiarid Lands and Deserts* J. Skujins, 1991-04-16 A compendium of current information on arid soils Provides a comprehensive background of the various soils and biota of arid regions as well as a detailed account of the current understanding of degradation processes and includes methodologies for arid land maintenance and rehabilitation and for

**Carbonates in Continental Settings** ,2009-10-20 This book provides an up to date compilation of the latest research on the petrography facies paleoenvironmental significance and economic aspects of continental carbonates The overall organization of the book first emphasizes the descriptive aspects and processes operating on carbonate deposits in greatly varied settings and then considers applications for basin analysis as well as economic and historical aspects This volume will be a valuable tool for graduate and postgraduate students as well as for experienced researchers The first part volume 61 in this series will deal with the facies environments and processes of carbonates in continental settings Covering the greatly varied aspects of carbonate deposits from continental settings deposits Clear and easy to follow organization of the book Graduate to postgraduate level Up to date information so readers can find references from the classic literature to the most recent research

Soil Survey Manual (U.S. Department of Agriculture Handbook No. 18) U.S. Department of Agriculture, 2019-04-06 The Soil Survey Manual USDA Handbook No 18 provides the major principles and practices needed for making and using soil surveys and for assembling and using related data The term soil survey is used here to encompass the process of mapping describing classifying and interpreting natural three dimensional bodies of soil on the landscape This work is performed by the National Cooperative Soil Survey in the United States and by other similar organizations worldwide The Manual provides guidance methodology and terminology for conducting a soil survey but does not necessarily convey policies and protocols required to administer soil survey operations The soil bodies contain a sequence of identifiable horizons and layers that occur in repeating patterns in the landscape as a result of the factors of soil formation as described by Dokuchaev 1883 and Jenny 1941

**Soils of the Past** Gregory J. Retallack, 2019-09-10 A student friendly textbook that describes ancient soils how they may be identified and their use in paleoenvironmental reconstruction Ancient soils contain vital mineralogical geochemical textural and paleontological information about the continental environments in which they formed Advances in isotope geochemistry and sequence stratigraphic models allow evermore detailed reconstructions of environmental change from paleosols and new insights into such diverse topics as atmospheric chemistry global change paleoecology geobiology and mass extinction This book educates readers about the field of paleopedology and how it remains

a key area of investigation for geologists and environmental scientists seeking to learn about and reconstruct the condition and evolution of paleoenvironments Presented in three sections Soils and Palesols Factors in Soil Formation and Fossil Record of Soils Soils of the Past An Introduction to Paleopedology describes the main types of ancient soil procedures for identifying and studying them their classification and most significantly a wide array of examples of how paleosols have been used for paleoenvironmental reconstruction The book is an excellent reflection of the current state of knowledge and can be widely adopted over many disciplines All chapters have been revised and updated to reflect advances in soil science in the last two decades New tables display a wealth of new data added since the 2nd edition published in 2001 New figures have been added and line art has been redrawn to improve clarity and promote understanding References have been updated throughout Soils of the Past 3rd Edition is written for advanced undergraduates studying paleopedology as part of a degree in geology environmental science or physical geography and for interested professional earth scientists

*Paleoenvironments and Paleohydrology of the Mojave and Southern Great Basin Deserts* Yehouda Enzel, Stephen G. Wells, Nicholas Lancaster, 2003 The Web of Geological Sciences Marion Eugene Bickford, 2013 This volume covers many of the important advances in the geological sciences from 1963 to 2013 These advances include understanding plate tectonics exploration of the Moon and Mars development of new computing and analytical technologies understanding of the role of microbiology in geologic processes and many others Provided by publisher **Characteristics, Timing, and Hazard Potential of Liquefaction-induced Landsliding in the Farmington Siding Landslide Complex, Davis County, Utah** Michael D. Hylland, Mike Lowe, 1998 The Farmington Siding landslide complex is in Davis County Utah about 25 kilometers north of Salt Lake City The landslide complex covers approximately 19.5 square kilometers and is one of 13 late Pleistocene Holocene features along the Wasatch Front mapped by previous investigators as possible liquefaction induced lateral spreads The Farmington Siding landslide complex is in a largely rural area but state and interstate highways railroads petroleum and natural gas pipelines and other lifelines cross the complex Continued population growth along the Wasatch Front increases the likelihood of urban development within and adjacent to the landslide complex Development along the Wasatch Front has proceeded with little consideration of hazards associated with liquefaction induced landslides Slope failure mechanisms extent of internal deformation and timing of landslide events are poorly understood and these factors must be evaluated to enable local governments to effectively plan for development and implement hazard reduction strategies as needed The purpose of this study is to assess the hazard associated with future liquefaction induced landsliding within and adjacent to the Farmington Siding landslide complex by evaluating slope failure modes and extent of internal deformation within the complex inferring the geologic and hydrologic conditions under which landsliding occurred determining the timing of landsliding and evaluating the relative likelihood of various earthquake source zones to trigger liquefaction induced landsliding We chose the Farmington Siding landslide complex for this study because of the

distinctiveness of geomorphic features on the northern part of the complex and the presence of landslide deposits that are clearly of different ages Furthermore because much of the area is rural appropriate land use planning measures can still be implemented to protect future development      *New Mexico's Ice Ages* Spencer G. Lucas,Gary S. Morgan,Kate E. Zeigler,2005-01-01      **Pendejo Cave** Richard S. MacNeish,Jane G. Libby,Jane G. Liddy,2003 This account of the archaeology of a cave in southern New Mexico makes a dramatic contribution to the ongoing debate over how long human beings have lived in the Americas The findings presented here show that human settlement may go back as far as 75 000 years before the present whereas the long accepted Clovis dates showed humans only about 12 000 years ago MacNeish and his colleagues subjected the cave its environs and its contents to rigorous interdisciplinary investigation The first section of this volume comprises their reports on the changing environment of the area The second section concentrates on the excavation of the cave s layers presenting the results of radiocarbon dating and describing the evidence of human occupation including friction skin prints and human hair The third section discusses the cultural implications of the materials recovered and suggests how the ancient peoples may have exploited the changing environment and developed different ways of life throughout the Americas before the time of Clovis man No serious discussion of early inhabitants in the New World can disregard the findings presented in this monumental work of scholarship      **Geological Survey Professional Paper** Geological Survey (U.S.),1992
