Popoola,Diana-Andra Borca-Tasciuc,2024-03-15 In this industrial and technological age energy plays a principal role in  
sustainable development This is connected to issues regarding availability production processes utilization and  
environmental impact Due to the increased rate of population growth the energy demand in the entire world is getting to the  
level that it may not be sustained in the nearest future if drastic action is not taken to address the situation especially from  
research and development perspectives None of the millennium development goals MDGs can be completed without  
considerable improvements in the quality and quantity of energy services in developing countries according to the United  
Nations Development Programme UNDP Based on this fact UNDP is making efforts especially in developing countries to  
ensure that people have access to sustainable sources of clean reliable and affordable energy since every aspect of human  
development is highly impacted by this vital resource      **Building Technology Publications** Center for Building

Kreider,2012-12-02 Medium and High Temperature Solar Processes discusses the principles and economic viability of  
medium and high temperature solar processes This book is organized into seven chapters that focus on the second law of  
thermodynamics and its use in matching solar collection methods to thermal processes It also provides general design  
guidelines for small and intermediate scale applications of solar processes The opening chapter presents an overview of  
energy use patterns in the United States and of the various solar thermal processes considered in the book The concepts of  
economics of solar systems and possible environmental impacts are also summarized Chapter 2 deals with the quantity  
geographic availability and quality of solar radiation with a particular emphasis on beam or direct radiation since it has the  
highest thermodynamic availability and is used by most elevated temperature collectors This chapter also describes the  
trigonometry of various solar tracking modes and optical properties of materials Chapter 3 considers selected topics on  
thermodynamics and heat transfer including various heat engine designs and their first and second law efficiencies radiation  
heat transfer and the properties of selective surfaces usable at high temperature Chapter 4 covers the components and  
systems for medium temperature processes such as concentrating collectors thermal storage heat exchangers and energy  
transport systems Chapter 5 treats systems for power production shaft power industrial process heat and total energy  
Chapter 6 presents engineering design data for high temperature collectors and their use in solar furnaces central solar  
power plants distributed power plants and solar thermionics The concluding chapter addresses the economics of the  
foregoing systems with an emphasis on methods and principles of analysis      **SERI-RR** ,1979
