Lim, 2012-12-06 Renewable energy sources such as solar energy were advocated even before the energy crisis in 1973 Subsequent development in solar energy has been remarkable Indeed it has been one of the most studied and researched topics in recent years Much of the technology in the utilization of solar energy has been associated with housing and industrial applications and to a smaller extent with commercial use The nature of the utilization has been related to the philosophy of independence or autonomy in that each housing or industrial unit is made self sufficient by the installation of solar energy equipment The general aim of the development of solar energy has been to substitute existing energy sources by solar energy especially among the developed countries in the temperate regions In developing countries the application of solar technology has been more acceptable in rural areas where conventional infrastructure is under developed A different direction is necessary for the development of solar energy in urban areas Buildings are inter related and have been dependent on the conventional infrastructure The consumption of energy is many times more than that in the rural areas A new approach to urban development must be generated and studies should be made on the feasibility and viability of using solar energy for urban settlements Architecture, City, Environment Koen Steemers, Simos Yannas, 2000 PLEA is a network of individuals sharing expertise in the arts sciences planning and design of the built environment It serves as an international interdisciplinary forum to promote discourse on environmental quality in architecture and planning This 17th PLEA international conference addresses sustainable design with respect to architecture city and environment at the turn of the millennium The central aim of the conference is to explore the interrelationships and integration of architecture city and environment The Proceedings will be of interest to all
