Solar Manifesto:

A Solar Manifesto Hermann Scheer, 2021-12-16 In the decade since the Earth Summit in Rio de Janeiro the response of the world's governments and authorities to the threats to the global environment has been to enforce the reduction of energy consumption and harmful emissions solutions primarily based around conventional energy resources and conventional thinking The question is though whether this strategy is radical enough to address the key challenges how facing the environment and whether it can be effective in avoiding catastrophe on a global scale For Herman Scheer the answer is a definite no In this fully updated edition of A Solar Manifesto he once more attacks the lack of political will to find answers outside a conventional frame of reference Climate change pollution deforestation destruction of the ozone layer poverty and the population explosion are all problems created or exacerbated by the use of conventional energy Seven years after the first edition of this book answers are now more urgently required than ever as current policies serve merely to alleviate the escalating symptoms rather than attempting a cure for what could become a terminal affliction Herman Scheer shows that this crisis may yet be reversed but it can only be made to happen through a fundamental change in political and economic strategies paving the way towards a global solar energy economy sustained by new social principles A Solar Manifesto champions the replacement of fossil and nuclear fuels with solar energy as a real solution to the threat to the environment and associated social consequences Scheer constructs a radical yet innovative political and economic model and argues the case with passion and conviction for the global solar economy as the route to a sustainable environment Thought provoking and profoundly challenging this book will be an inspiration to anyone concerned with energy and the global environment

change **Energy and Power** Stephen G. Gross,2023 In *Energy and Power* Stephen G Gross offers the first comprehensive history of German energy and climate policy from World War II to the present He shows how debates over energy profoundly shaped the course of German history and influenced the landmark developments that define modern Europe Moving beyond conventional economic theory this book gives a novel explanation for why energy transitions happen Further it provides a powerful lens to move beyond conventional debates on Germany's East West divide or its postwar engagement with the Holocaust to explore how this nation has shaped the contemporary world in other important ways *Energy Humanities* Imre Szeman,Dominic Boyer,2017-04-22 *Energy humanities* is a field of scholarship that like medical humanities and digital humanities before it overcomes traditional boundaries between the disciplines and between academic and applied research Like its predecessors *energy humanities* highlights the essential contribution that the insights and methods of the human sciences can make to areas of study and analysis once thought best left to the natural sciences This isn't a case of the humanities simply helping their cross campus colleagues to learn the mechanics of communication so that they might better articulate their ideas Rather these fields of scholarship are ones that demonstrate how the scale and complexity of the issues being explored demand insights and approaches that transcend old school disciplinary boundaries *Energy Humanities A Reader* offers a carefully curated selection of the best and most influential work in *energy humanities* that has appeared over the past decade To stay true to the diverse work that makes up this emergent field selections range from anthropology and geography to philosophy history and cultural studies to recent energy focused interventions in art and literature The three readers all agree that this is an important ground breaking collection of work Provided by publisher **Natural Resource Management for Sustainable Development in the Caribbean** Ivan Goodbody,Elizabeth M. Thomas-Hope,2002 At the International Earth Summit convened in Rio de Janeiro in 1994 all nations of the world were mandated to protect the environment for the benefit of present and future generations This collection introduces the reader to the major issues involved in the management of a number of resources critical to Caribbean development The chapters discuss the sustainability of water fisheries and agriculture in the region from a variety of perspectives Particular emphasis is also given to the use of energy recreation and coastal resource management and their impact on the fragile ecosystem The book makes a contribution to the ongoing debate of sustainable environmental management within the region and the world **Energy Futures** Simone Abram,Karen Waltorp,Nathalie Ortat,Sarah Pink,2022-12-31 Everyday life as we knew it is increasingly challenged in a world of climate social health and political crisis Emerging technologies data analytics and automation open up new possibilities which have implications for energy generation storage and energy demand To support these changes we urgently need to rethink how energy will be sourced shared and used Yet existing approaches to this problem driven by engineering data analytics and capital are dangerously conservative and entrenched *Energy Futures* critically evaluates this context and the energy infrastructures stakeholders and politics that participate in it to propose plausible responsible and

ethical modes of encountering possible energy futures Imagining anthropocene challenges emerging technologies and everyday life otherwise through empirically grounded studies opens up possible energy futures Energy Futures proposes and demonstrates a new critical and interventional futures oriented energy anthropology Combining the theories and methods of futures anthropology with the critical expertise and perspectives of energy anthropology creates a powerful mode of engagement which this book argues is needed to disrupt the dominant narratives about our energy futures Its contributors collectively reveal and evidence through innovative ethnographic practice how new knowledge about imagined and possible energy futures can be mobilised in engagements with emerging technologies anthropocene challenges and everyday realities In doing so it brings together authors analytical expertise and ethnographic evidence from the global south north and places in between generated through innovative methodologies including remote video and comic strip methods and documentary video practice as well as long term fieldwork
