Solar Water Disinfection:

Solar Water Disinfection Regula Meierhofer, Martin Wegelin, 2002 Water Disinfection by Solar Radiation A. Acra, International Development Research Centre (Canada), 1990 Water Disinfection by Solar Radiation Assessment and Application Low-tech Photocatalysts for Solar Water Disinfection (SODIS). Sarah Marie Larlee, 2017 Solar water disinfection SODIS is a household water treatment technique that involves adding microbiologically contaminated water to clear bottles and leaving them in full sunlight for at least 6 hours While SODIS is a low cost technique that requires few resources it is a time consuming process In order to make SODIS more effective this work investigated the use of low tech photocatalysts Initial experiments examined the ability of fired clay coated with TiO₂ and urea to remove colour from a methylene blue solution but results indicated that bare fired clay performed similarly to the coated pieces Therefore different bare clays were investigated further as photocatalysts for SODIS One of the clays Low Red was able to inactivate E coli within 1 hour of sunlight exposure Based on the results of these experiments certain fired clays may be able to serve as photocatalysts for SODIS **Enhancing the Solar Water Disinfection (SODIS) Method Using a Fresnel Lens**

Christina Awad, 2012 In exploring this technology approach this research sought to lay a foundation in which the mechanism application and relevance of lens enhanced solar disinfection can be more closely studied Better designs better materials and a better understanding of the fundamental principles governing disinfection can be brought to the forefront with the examination of existing designs materials and current data that this research looks to elucidate Ultimately it is towards this end in which this research is directed to help mitigate human suffering due to something well within our capability

Successful Promotion of Solar Water Disinfection (SODIS) Andrea Tamas, 2009 **Solar Water Disinfection** Ron Alward, Ayoub, Josef, Brunet, Eric, Brace Research Institute, 1991 **Recent Experiments in Solar Water Disinfection** Ayoub, Josef, T. A. Lawand, Brace Research Institute, Papp, R, 1994* Solar Water Disinfection Samrath Madan, 2011 Water quality is a severe problem throughout the world Much available water is contaminated by pathogenic microbes This project reviews the traditional process of solar water disinfection in bottles SODIS discusses experiments conducted with SODIS bottles modified to thermally enhance the process analyzes experimental data for modified SODIS containers and suggests ways that by which the traditional process can be improved Traditional SODIS is currently used in many rural parts of developing countries to disinfect water The process uses ultraviolet rays and thermal effects to inactivate microorganisms that tend to cause diarrheal disease If a sufficiently high temperature is attained to reach a synergistic UV thermal effect range the process of SODIS is about three times faster However many factors can inhibit attainment of sufficient heating of water in SODIS bottles in practice By modifying the bottles to enhance effectiveness of sunlight in increasing the temperature of the water SODIS can be more effective In this research a series of experiments were conducted over a period of four months and 15 days at Arizona State University Polytechnic campus in Mesa Arizona U S A Four different types of

inexpensive materials black paint white paint foam insulation and aluminized mylar were used individually or in combination in seven different modified configurations to assess the potential of the modifications to increase the temperatures of water inside 2 liter PET bottles Experiments were run in triplicate Temperatures inside the bottles along with yard temperature were recorded over time Graphs were plotted for each set of experiments The results of these experiment show that several types of modifications increased water temperature during exposure to sunlight Water in bottles with black paint and foam insulation on the back side attained the highest temperatures approximately 8 10 degrees Celsius above temperatures attained in plain bottles The results of these experiments show how several inexpensive easily obtained materials can significantly enhance the SODIS process

Sustainable Water Purification M. R. Islam, M. Safiur Rahman, 2020-07-17 This is the only book that takes a zero waste approach to propose 100% sustainable water purification techniques Water is synonymous with life This has been the case since pre historic time to the modern era For the first time humanity faces a crisis that eclipses the energy crisis which has often incapacitated the global economy The Climate Water Food nexus epitomizes our current civilization that depends on energy as the driver Many recognize this crisis as a product of fossil fuel production which allegedly triggered climate change and the climate change debate Others predict the onslaught of water wars in the coming decades As the world gears up to another lineup of empty promises and ensuing chaos this book turns this crisis on its head and shows the source of the water crisis The science behind the water cycle is described in clear language without resorting to dogmatic assertions and spurious assumptions The role of the sun natural carbon dioxide CO₂ and water and the need to maintain natural processes free from artificial chemicals are discussed in detail The book makes it clear how most of the currently used purification techniques violates the natural cycle involving sunlight CO₂ and water and thus become unsustainable A series of water purification techniques as usable for drinking agricultural and industrial applications are presented The advantages of these techniques and their long term sustainability are highlighted with discussion on improvements in the future Whether for the engineer or scientist working in the field or laboratory or the student this is a must have for any engineer scientist student or policymaker

Photocatalysis and Water Purification Pierre Pichat, 2013-03-26 Water is one of the essential resources on our planet Therefore fresh water and the recycling of waste water are very important topics in various areas Energy saving green technologies are a demand in this area of research Photocatalysis comprises a class of reactions which use a catalyst activated by light These reactions include the decomposition of organic compounds into environmental friendly water and carbon dioxide leading to interesting properties of surfaces covered with a photocatalyst they protect e g against incrustation of fouling matter they are self cleaning antibacterial and viricidal Therefore they are attractive candidates for environmental applications such as water purification and waste water treatment This book introduces scientists and engineers to the fundamentals of photocatalysis and enlightens the potentials of photocatalysis to increase water quality Also strategies to improve the photocatalytic efficacy are

pointed out synthesis of better photocatalysts combination of photocatalysis with other technologies and the proper design of photocatalytic reactors Implementation of applications and a chapter on design approaches for photocatalytic reactors round off the book Photocatalysis and Water Purification is part of the series on Materials for Sustainable Energy and Development edited by Prof G Q Max Lu The series covers advances in materials science and innovation for renewable energy clean use of fossil energy and greenhouse gas mitigation and associated environmental technologies

Waste Water Treatment and Reuse in the Mediterranean Region Damià Barceló, Mira Petrovic, 2011-01-06 Water scarcity and the need for ecological sustainability have led to the introduction of treated waste water as an additional water resource in the national water resource management plans of Mediterranean countries Summarizing the results generated within the European Union funded project INNOVA MED this volume highlights the following topics Application of innovative technologies and practices for waste water treatment and reuse adapted to the Mediterranean region Constraints on the application of advanced treatments and reuse of reclaimed water and sludge Problems and requirements of sustainable water management in the Mediterranean area The book includes several examples of Mediterranean countries such as Tunisia Morocco Egypt Palestine and Spain and presents their practical experiences in the application of innovative processes and practices for waste water treatment and reuse

Photo- and Electrochemical Water Treatment Halan Prakash, Rita S Dhodapkar, Kevin McGuigan, 2022-12-21 Globally 2.1 billion people live without access to safe water and about 159 million people collect their drinking water directly from surface water sources This issue is particularly prominent in water stressed areas such as India which has a rural population of around 700 million 63 million of whom do not have access to clean water Contaminants of Emerging Concern CECs of both a chemical and biological nature are increasingly being detected in wastewater effluents around the world Chemical CECs include pollutants such as pharmaceuticals and personal care products pesticides hormones and endocrine disruptors and biological CECs include antibiotic resistant bacteria pathogenic protozoans and viruses New technologies to remove the contaminants from water are urgently needed and photochemical approaches offer an exciting array of possibilities Covering chemical analysis molecular biology methods and computational approaches important for the elucidation of mechanisms and evaluation of photochemical processes this book presents advanced photochemical processes for the removal of CECs from water Readers will find chapters on advanced photochemical treatment prototypes and pilot plants and discussions on translation from lab to field scale implementation Examples include highly transparent materials integrated membranes adsorbents and photocatalysts for enhancing the photochemical processes by direct sunlight induced reactions photo Fenton and photo electrochemical reactions Discussing both the advantages and disadvantages of these technologies this book is a great resource both for academics researching photocatalytic processes and for water treatment professionals
