## **Solar Space Observations And Stellar Prospects:**

**Future Missions in Solar, Heliospheric & Space Plasma Physics** Erica Rolfe, B. Battrock, 1985      **International Aerospace Abstracts**, 1995      *Advances in Helio- and Asteroseismology* Jørgen Christensen-Dalsgaard, Søren Frandsen, 2012-12-06 Helio and asteroseismology study the interior of the Sun and other stars by means of observations of oscillations on their surfaces The last 10 years in the study of the solar interior to a has witnessed a very rapid evolution point where we can now contemplate investigating the physical state of matter or the details of rotation and other large scale motion in the Sun The stellar studies are in some respects at the point of the solar studies 10 years ago but appear poised to take off Thus the time was deemed ripe for IAO Symposium No 123 to assess the present status of this work and plan for its future development Apart from the seismic data few observations are available to provide information about stellar interiors Detailed studies by spectral analysis can be made of stellar surface properties including atmospheric temperature and chemical composition However the stellar radiative spectrum is almost entirely fixed by the mass luminosity radius and surface rotation of the star and contains essentially no other information about the interior An important test of stellar evolution theory is provided by observations of stellar clusters whose members can reasonably be assumed to have the same age and chemical composition The location of such stars in a HR diagram where luminosity is plotted against the effective temperature can roughly be understood in terms of stellar evolution calculations      **Physics Briefs**, 1992      *Solar-space Observations and Stellar Prospects* J. W. Harvey, Hugh S. Hudson, Robert W. Noyes, 1985      **Microgravity** COSPAR. Plenary Meeting, 1989 Increased funding for ground based research by national space agencies coupled with the development of unique hardware for experimentation in space has led to a tremendous increase in research into the behaviour of materials under microgravity conditions The thirty three papers in this volume highlight research areas of particular scientific and industrial interest and discuss specific ground based projects where the results of laboratory research are applied by industry to the development of flight hardware      **Solid Earth Geophysics and Satellite Orbits** COSPAR. : Plenary Meeting 1986, 1987      **The International Heliospheric Study** COSPAR. Plenary Meeting, 1989 The International Heliospheric Study is a program sponsored by COSPAR that exploits the unique scientific opportunities presented by the continuing operation of the four Pioneer and Voyager spacecraft which are all in or beyond the outer solar system The heliosphere is the region of space surrounding the sun which is dominated by the solar wind and from which the local interstellar plasma and magnetic field are excluded The multispacecraft studies which form the basis of the IHS encompass the structure and dynamics of the solar wind and its interaction with the interstellar medium including those components neutral gas and galactic cosmic rays which are able to penetrate into the heliosphere      **The Stratosphere and Climatic Change** COSPAR. Plenary Meeting, 1987      *The Atmosphere of Venus, Recent Findings* COSPAR. Plenary Meeting, 1985      *The Earth's Middle and Upper Atmosphere* COSPAR. Plenary Meeting, COSPAR., 1989 The Symposium on Multipoint Measurements of Magnetosphere Processes held at the 27th Plenary Meeting of COSPAR treated auroral processes substorm phenomena the shock and foreshock the solar wind magnetosphere interaction the magnetopause and reconnection magnetosphere ionosphere interactions and processes in the inner magnetosphere including both ULF and VLF waves Observations discussed include those recently obtained from Viking EXOS C Eiscat and the Greenland magnetometer chain as well as those from earlier missions such as IMP 8 Prognoz ISEE and DE The results discussed in these papers should help guide the measurement strategies and scientific objectives for the upcoming International Solar Terrestrial Program

Northumberland and Durham with visits to ancient castles and churches to Hexham Abbey and Durham Cathedral and dinners in Newcastle and Durham was greatly enjoyed by those attending the meeting and by their guests The success of the scientific programme can be judged by this special edition of Geophysical Surveys which is derived mainly from the papers given at the meeting The story starts in the late 1940s when the question of the origin of the magnetic field of the Earth and such other heavenly bodies as had at that time been discovered as having a magnetic field was exercising the minds of several scientists notably P M S Blackett at Manchester W M Elsasser at the University of Pennsylvania and E C Bullard at Cambridge Two alternative mechanisms were proposed In one the magnetic field was in some way connected with the distributed angular momentum of a rotating body in the other electric currents in conducting parts within the body were proposed as the source of magnetic field      **Comets Halley and Giacobini-Zinner** COSPAR.
