Solar Energy Conversion A Photoelectrochemical Approach:

Solar Energy Conversion Jurij V. Pleskov, Prem Kumar Dang, 1990 Conversion of solar energy is an important contemporary research field with the objective of substituting fossil and nuclear power sources The author research director at the prestigious A N Frumkin Institute of Electrochemistry Moscow USSR summarizes and critically discusses photoelectrochemical solar energy conversion and its storage After an introduction to the fundamental physics of the semiconductor electrolyte interface technical cells for water electrolysis for the generation of fuel hydrogen and the electrochemical conversion of other energy rich chemicals are explained The application of new electrochemical e g microheterogeneous semiconductors liquid junction solar cells and electrode coatings are discussed The book provides an overview of current processes and potential technical applications for students researchers and engineers

Solar Energy Conversion Yuri V. Pleskov, 1990 In the past 12 15 years an essentially new trend in electrochemistry has sprung up around the problem of solar energy conversion Strictly speaking this is not a purely electrochemical but an interdisciplinary field involving the fields of catalysis corrosion chemistry of disperse systems and others Nevertheless electro chemistry to be more exact photoelectrochemistry of semiconductors provides a theoretical basis for new methods of converting light energy into electrical or chemical energy which we hope shall find practical application in the not so distant future In the past years this field has been discussed amply and at length in special monographs e g in Ref 1 Therefore in this book the photoelectrochemistry of semiconductors is presented in a concise form exceptions are only specific problems which have been elucidated incorrectly or have not been covered completely in the literature In this compact monograph we have abandoned the principle of self seclusion for a more deep insight into the fundamentals of electrochemistry photoelectrochemistry and physics of semiconductors the reader shall have to refer to the below cited manuals while information on the physicochemical properties of particular semiconductor electrodes can be taken e g from Refs 2 3
