Jespers, F. van de Wiele, M.H. White, 1976-05-31 An Advanced Study Institute on solid state imaging was held in Louvain la Neuve Belgium on September 3 12 1975 under the auspices of the Scientific Affairs Division of NATO The Institute was organized by a scientific organizing committee consisting of Professor Paul Jespers and Professor Fernand Van de Wiele of the Universite Catholique de Louvain and Dr Marvin H White of the Westinghouse Electric Corporation This book represents the contributions of the lecturers at the Institute and the chapters present for the first time a concise treatment of a very timely subject namely solid state imaging The organization of the book parallels the program at the Institute with an introduction comprised of historical development and applications This is followed by the physics of photosensors which leads quite naturally into the various solid state photosensor arrays The subject of signal extraction which is often an overlooked area follows and the last part of the book is devoted to the various systems considerations The subject matter of this book is suitable for a wide range of interests from the advanced student through the practicing physicist and engineer to

the research worker Although a novice may find some difficulty with the mathematical development he can acquire a perspective into the field of solid state imaging with this book Likewise portions of this book may be used as a text book since the chapters are instructional and self contained

Scientific Charge-coupled Devices James R. Janesick, 2001 The book provides invaluable information to scientists engineers and product managers involved with imaging CCDs as well as those who need a comprehensive introduction to the subject Page 4 de la couverture

Semiconductor Devices and Integrated Electronics A. G. Milnes, 2012-12-06 For some time there has been a need for a semiconductor device book that carries diode and transistor theory beyond an introductory level and yet has space to touch on a wider range of semiconductor device principles and applications Such topics are covered in specialized monographs numbering many hundreds but the voluminous nature of this literature limits access for students This book is the outcome of attempts to develop a broad course on devices and integrated electronics for university students at about senior year level The educational prerequisites are an introductory course in semiconductor junction and transistor concepts and a course on analog and digital circuits that has introduced the concepts of rectification amplification oscillators modulation and logic and Switching circuits The book should also be of value to professional engineers and physicists because of both the information included and the detailed guide to the literature given by the references The aim has been to bring some measure of order into the subject area examined and to provide a basic structure from which teachers may develop themes that are of most interest to students and themselves Semiconductor devices and integrated circuits are reviewed and fundamental factors that control power levels frequency speed size and cost are discussed The text also briefly mentions how devices are used and presents circuits and comments on representative applications Thus the book seeks a balance between the extremes of device physics and circuit design

Devices for Optoelectronics Leigh, 1996-07-09 Offers coverage of optical devices utilized in communication and information processing systems highlighting the physics of optoelectronics necessary for both hybrid and monolithic optical integrated circuits The text aims to bridge the gap between thin film switches and active semiconductors by analyzing lithium niobate as well as compound semiconductor devices and includes discussion on optical transmitters receivers and switches
