Optical Solitons in Fibers Akira Hasegawa, Masayuki Matsumoto, 2012-11-02 Optical solitons in fibers are a beautiful example of how an abstract mathematical concept has had an impact on new information transmission technologies. The concept of all optical data transmission with optical soliton systems is now setting the standard for the most advanced transmission systems. The book deals with the motion of light waves in optical fibers, the evolution of light wavepackets, optical information transfer, all optical soliton transmission systems, the control of optical solitons, polarization effects, dispersion managed solitons, WDM transmission, soliton lasers, all optical switching, and other applications. This book is a must for all researchers and graduate students active in the field of optical data transmission.

New Trends in Optical Soliton Transmission Systems Akira Hasegawa, 2012-12-06 This book summarizes the proceedings of the invited talks presented at the International Symposium on New Trends in Optical Soliton Transmission Systems held in Kyoto during November 18-21, 1997. As a result of worldwide demand for ultra-high bitrate transmissions and increased scientific interest from the soliton community, research on optical solitons in fibres has made remarkable progress in recent years. In view of these trends, the Research Group for Optical Soliton Communications (ROSC), chaired by Akira Hasegawa, was established in Japan in April 1995 to promote collaboration and information exchange among communication service companies, industries, and academic circles in the theory and application of optical solitons. This symposium was organized as a part of the ROSC activities. As with the 1st ROSC symposium, this symposium attracted enthusiastic response from worldwide researchers involved in the subject of soliton-based communications, and intensive discussions were held throughout the symposium. Particular emphases were made to dispersion management of soliton transmission. I would like to note that in the 1st symposium, the adiabatic dispersion management just began to appear in reducing radiation at amplifiers and reducing collision effects in WDM systems. These have become standard this time, but in addition, new non-adiabatic dispersion management has been introduced independently by various scientists all over the world.

Continuous Symmetries and Integrability of Discrete Equations Decio Levi, Pavel Winternitz, Ravil I. Yamilov, 2023-01-23 This book on integrable systems and symmetries presents new results on applications of symmetries and integrability techniques to the case of equations defined on the lattice. This relatively new field has many applications, for example, in describing the evolution of crystals and molecular systems defined on lattices and in finding numerical approximations for differential equations preserving their symmetries. The book contains three chapters and five appendices. The first chapter is an introduction to the general ideas about symmetries, lattices, differential difference and partial difference equations, and Lie point symmetries defined on them. Chapter 2 deals with integrable and linearizable systems in two dimensions. The authors start from the prototype of integrable and linearizable partial differential equations, the Korteweg-de Vries and the Burgers equations. Then they consider the best-known integrable differential difference and partial difference equations. Chapter 3 considers generalized symmetries and conserved densities as integrability criteria. The appendices provide details which may help the readers' understanding of the subjects presented.

in Chapters 2 and 3 This book is written for PhD students and early researchers both in theoretical physics and in applied mathematics who are interested in the study of symmetries and integrability of difference equations

and S Wabnitz 1 L D Landau Institute for Theoretical Physics 2 Kosygin Str 117334 Moscow Russia 2 Laboratoire de Physique University of Bourgogne 9 avenue A Savary 21078 Dijon France After about a quarter of a century since the first theoretical predictions of optical solitons the industrial application of the optical soliton concept is near to reality in the booming field of modern telecommunications where the demand for high speed data transmission and routing is of ever growing This book contains a set of lectures that were presented at a Les Houches school on optical solitons in September 1998 The school was successful in gathering among the lecturers most of the well recognized world leaders in the field of optical solitons A variety of different aspects of research into optical solitons was exposed in the lectures ranging from the mathematical foundations of integrability theory to the rapidly evolving technological advances of fiber soliton based telecommunication systems The overall impression that the participants and the students received from the school is that this field of research is an excellent example of the rapid transfer that occurs nowadays from basic science to the technological implementations of the first principles The subjects that were covered by the lectures can be broadly grouped into four main categories optical soliton theory fiber soliton telecommunications optical soliton generation methods and all optical information processing via spatial solitons

Massive WDM and TDM Soliton Transmission Systems Akira Hasegawa, 2006-04-11 This book summarizes the proceedings of the invited talks presented at the International Symposium on Massive TDM and WDM Optical Soliton Transmission Systems held in Kyoto during November 9-12 1999 The symposium is the third of the series organized by Research Group for Optical Soliton Communications ROSC chaired by Akira Hasegawa The research group ROSC was established in Japan in April 1995 with a support of the Japanese Ministry of Post and Telecommunications to promote collaboration and information exchange among communication service companies communication industries and academic circles in the theory and application of optical solitons The symposium attracted enthusiastic response from worldwide researchers in the field of soliton based communications and intensive discussions were made In the symposium held in 1997 new concept of soliton transmission based on dispersion management of optical fibers were presented This new soliton is now called the dispersion managed soliton The present symposium mainly focuses the theoretical and experimental developments of dispersion managed solitons It is remarkable that the concept of the dispersion managed soliton which was just born two years ago when the naming was not even given yet has become the center of soliton research in two years The dispersion managed soliton has an enhanced power in maintaining reasonable signal to noise ratio yet has reduced Gordon Haus timing jitter by reduced averaged dispersion The dispersion managed soliton also has demonstrated its power in soliton based WDM transmissions
