Solitons And Geometry:

Glimpses of Soliton Theory Alex Kasman, 2010 Glimpses of Soliton Theory addresses some of the hidden mathematical connections in soliton theory which have been revealed over the last half century It aims to convince the reader that like the mirrors and hidden pockets used by magicians the underlying algebro geometric structure of soliton equations provides an elegant and surprisingly simple explanation of something seemingly miraculous **Solitons and Geometry** S. P.

Novikov, 1994-09-15 This is an introduction to the geometry of Hamiltonian systems from the modern point of view where the basic structure is a Poisson bracket Using this approach a mathematical analogue of the famous Dirac monopole is obtained starting from the classical top in a gravity field This approach is especially useful in physical applications in which a field theory appears this is the subject of the second part of the lectures which contains a theory of conservative hydrodynamic type systems based on Riemannian geometry developed over the last decade The theory has had success in solving problems in physics such as ones associated with dispersive analogues of shock waves and its development has led to the introduction of new notions in geometry The book is based on lectures given by the author in Pisa and which were intended for a non specialist audience It provides an introduction from which to proceed to more advanced work in the area **Solitons,**

Kodama, 2017-03-24 This is the first book to treat combinatorial and geometric aspects of two dimensional solitons Based on recent research by the author and his collaborators the book presents new developments focused on an interplay between the theory of solitons and the combinatorics of finite dimensional Grassmannians in particular the totally nonnegative TNN parts of the Grassmannians The book begins with a brief introduction to the theory of the Kadomtsev Petviashvili KP equation and its soliton solutions called the KP solitons Owing to the nonlinearity in the KP equation the KP solitons form very complex

but interesting web like patterns in two dimensions These patterns are referred to as soliton graphs The main aim of the book is to investigate the detailed structure of the soliton graphs and to classify these graphs It turns out that the problem has an intimate connection with the study of the TNN part of the Grassmannians The book also provides an elementary introduction to the recent development of the combinatorial aspect of the TNN Grassmannians and their parameterizations which will be useful for solving the classification problem This work appeals to readers interested in real algebraic geometry combinatorics and soliton theory of integrable systems It can serve as a valuable reference for an expert a textbook for a special topics graduate course or a source for independent study projects for advanced upper level undergraduates specializing in physics and mathematics

Bäcklund and Darboux Transformations A. A. Coley, 2001-01-01 This book is devoted to a classical topic that has undergone rapid and fruitful development over the past 25 years namely Backlund and Darboux transformations and their applications in the theory of integrable systems also known as soliton theory The book consists of two parts The first is a series of introductory pedagogical lectures presented by leading experts in the field They are devoted respectively to Backlund transformations of Painleve equations to the dressing method and Backlund and Darboux transformations and to the classical geometry of Backlund transformations and their applications to soliton theory The second part contains original contributions that represent new developments in the theory and applications of these transformations Both the introductory lectures and the original talks were presented at an International Workshop that took place in Halifax Nova Scotia Canada This volume covers virtually all recent developments in the theory and applications of Backlund and Darboux transformations
