These constitute the starting point for the subsequent papers of this volume. Some problems are also discussed.

o Introduction In this paper we present the basic notions and results from the general theory of local symmetries and conservation laws of partial differential equations. More exactly we will focus our attention on the main conceptual points as well as on the problem of how to find all higher symmetries and conservation laws for a given system of partial differential equations. Also some general views and perspectives will be discussed.

Models and Methods of High-Tc Superconductivity J. K. Srivastava, Sadasiva Madiraju Rao, 2003 The articles in this exceptional book contain regular papers, extended papers and reviews and thus vary in length and are useful for all kinds of audience. They describe as the book's name suggests HTSC models and methodologies. Physical models like extended BCS model, bipolaron model, spin bag model, RVB resonating valence bond model, preformed Cooper pairs and antiferromagnetic spin fluctuation, AFSF based models, stripe phase, paired cluster spin glass, SG frustration based model, Kamimura Suwa Hund's coupling mechanism based model, electron plasmon interaction, electron phonon interaction etc. theoretical methods, methodologies like generalised BCS, Migdal-Eliashberg theory, Hubbard model, t-J model, t-t' U model, Hubbard-Holstein model, Fermi non-Fermi and marginal Fermi liquid concepts, generalised Hartree-Fock formalism etc. and experimental status and methodologies are all described there. For comparison with cuprates, fullerenes, ruthenates, organic non-Cu containing oxide and conventional elemental A15 superconductors, molecular crystals, nickelates, manganites, borides etc. are also discussed.

New Developments in Quantum Cosmology Research Albert Reimer, 2005 Horizons in World Physics Volume 247 New Developments in Quantum Cosmology Research **On the Structure of Physical Vacuum and a New Interaction in Nature (theory, Experiment, Applications)** I. A. Baurov, 2000 In the book an unconventional physical model of creation of the observed physical space from a finite set of special discrete objects, byons, is presented. The global space

anisotropy associated with a cosmological vectorial potential appearing in the definition of byuons as well as a new interaction due to this anisotropy are predicted Results of an experimental investigation of the proposed new interaction are given A new method of power production based on the new interaction as well as a new principle of motion of objects in nature with the use of physical space as a support medium are advanced The book is intended for the general reading public physicists theorists and experimenters astrophysicists engineers specialists in space technology and power engineering and physical students

V. Sklizkov, 1987 Stoichiometry in Crystal Compounds and Its Influence on Their Physical Properties I. M. Popov, 1988 CIP lists title as Stoichiometry and its influence on the physical properties of crystalline compounds The papers cover investigations of A 2 B 6 and A 4 B 6 crystal compounds and certain A 3 B 5 compound heterostructures Annotation copyright Book News Inc Portland Or *Group-Theoretical Methods for Integration of Nonlinear Dynamical Systems* Andrei N. Leznov, Mikhail V. Saveliev, 2012-12-06 The book reviews a large number of 1 and 2 dimensional equations that describe nonlinear phenomena in various areas of modern theoretical and mathematical physics It is meant above all for physicists who specialize in the field theory and physics of elementary particles and plasma for mathematicians dealing with nonlinear differential equations differential geometry and algebra and the theory of Lie algebras and groups and their representations and for students and post graduates in these fields We hope that the book will be useful also for experts in hydrodynamics solid state physics nonlinear optics electrophysics biophysics and physics of the Earth The first two chapters of the book present some results from the representation theory of Lie groups and Lie algebras and their counterpart on supermanifolds in a form convenient in what follows They are addressed to those who are interested in integrable systems but have a scanty vocabulary in the language of representation theory The experts may refer to the first two chapters only occasionally As we wanted to give the reader an opportunity not only to come to grips with the problem on the ideological level but also to integrate her or his own concrete nonlinear equations without reference to the literature we had to expose in a self contained way the appropriate parts of the representation theory from a particular point of view
