Mathematics for Physicists Brian R. Martin, Graham Shaw, 2015-04-09 Mathematics for Physicists is a relatively short volume covering all the essential mathematics needed for a typical first degree in physics from a starting point that is compatible with modern school mathematics syllabuses Early chapters deliberately overlap with senior school mathematics to a degree that will depend on the background of the individual reader who may quickly skip over those topics with which he or she is already familiar The rest of the book covers the mathematics that is usually compulsory for all students in their first two years of a typical university physics degree plus a little more There are worked examples throughout the text and chapter end problem sets Mathematics for Physicists features Interfaces with modern school mathematics syllabuses All topics usually taught in the first two years of a physics degree Worked examples throughout Problems in every chapter with answers to selected questions at the end of the book and full solutions on a website This text will be an excellent resource for undergraduate students in physics and a quick reference guide for more advanced students as well as being appropriate for students in other physical sciences such as astronomy chemistry and earth sciences

Investigating Explanation-Based Learning Gerald DeJong, 2012-12-06 Explanation Based Learning EBL can generally be viewed as substituting background knowledge for the large training set of exemplars needed by conventional or empirical machine learning systems The background knowledge is used automatically to construct an explanation of a few training exemplars The learned concept is generalized directly from this explanation The first EBL systems of the modern era were Mitchell s LEX2 Silver s LP and De Jong s KIDNAP natural language system Two of these systems Mitchell s and De Jong s have led to extensive follow up research in EBL This book outlines the significant steps in EBL research of the Illinois group under De Jong This volume describes theoretical research and computer systems that use a broad range of formalisms

schemas production systems qualitative reasoning models non monotonic logic situation calculus and some home grown ad hoc representations This has been done consciously to avoid sacrificing the ultimate research significance in favor of the expediency of any particular formalism The ultimate goal of course is to adopt or devise the right formalism

Optimization Approaches for Solving String Selection Problems Elisa Pappalardo, Panos M. Pardalos, Giovanni Stracquadanio, 2013-10-09

A Decade of the Berkeley Math Circle Zvezdelina Stankova, Tom Rike, 2015-02-03

Many mathematicians have been drawn to mathematics through their experience with math circles The Berkeley Math Circle BMC started in 1998 as one of the very first math circles in the U S Over the last decade and a half 100 instructors university professors business tycoons high school teachers and more have shared their passion for mathematics by delivering over 800 BMC sessions on the UC Berkeley campus every week during the school year This second volume of the book series is based on a dozen of these sessions encompassing a variety of enticing and stimulating mathematical topics some new and some continuing from Volume I from dismantling Rubik's Cube and randomly putting it back together to solving it with the power of group theory from raising knot eating machines and letting Alexander the Great cut the Gordian Knot to breaking through knot theory via the Jones polynomial from entering a seemingly hopeless infinite raffle to becoming friendly with multiplicative functions in the land of Dirichlet M bius and Euler from leading an army of jumping fleas in an old problem from the International Mathematical Olympiads to improving our own essay writing strategies from searching for optimal paths on a hot summer day to questioning whether Archimedes was on his way to discovering trigonometry 2000 years ago Do some of these scenarios sound bizarre having never before been associated with mathematics Mathematicians love having fun while doing serious mathematics and that love is what this book intends to share with the reader Whether at a beginner an intermediate or an advanced level anyone can find a place here to be provoked to think deeply and to be inspired to create In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a

service to young people their parents and teachers and the mathematics profession Titles in this series are co published with the Mathematical Sciences Research Institute MSRI

The Role of the Sun in Climate Change Douglas V. Hoyt, Kenneth H. Schatten, 1997-04-03 The luminosity of the sun governs the temperatures of the planets Yet the solar forcing or driving of climate primarily due to changes in solar radiation has never been well documented Recent satellite measurements have shown that solar radiation varies as a function of time and wavelength a concept that has been hypothesized for the past two centuries and has recently become a major topic with all the attention paid to global warming This book reviews the physics of the concept of solar forcing from its beginnings in the early 1800 s and apparent success in the 1870 s to its near demise in the 1950 s and recent resurgence Since its emphasis is on solar variations as a driver for climate change with only a brief discussion of other mechanisms the book will be of most interest to students in climate studies
