

Steps to solving Systems of Equations by Substitution:

$$x + 3y = 6$$

$$2x + 8y = -12$$

1. Isolate a variable in one of the equations. (Either $y =$ or $x =$).

$$x + 3y = 6$$

$$x = 6 - 3y$$

2. Substitute the isolated variable in the other equation.

$$2x + 8y = -12$$

$$2(6 - 3y) + 8y = -12$$

3. This will result in an equation with one variable. Solve the equation.

$$12 - 6y + 8y = -12$$

$$2y = -24$$

$$y = -12$$

4. Substitute the solution from step 3 into another equation to solve for the other variable.

$$x + 3(-12) = 6$$

$$x = 42$$

5. Recommended: Check the solution.

$$42 = 6 - 3(-12)$$

Anaphoric Relations in English and French Francis Cornish, 2015-07-03 First published in 1986 this book focuses on Anaphoric relations in the English and French languages a phenomenon that involves a complex interaction between grammar and discourse Studies of anaphora taking a largely textual approach to the subject have tended to underestimate the effect upon its formation of referential and discourse factors while studies framed within a psycholinguistic and computational perspective have been inclined to minimise the importance of the purely linguistic features connected with anaphora This volume places the study of anaphora upon a firmer foundation by examining both its nature and functions in discourse by pinpointing the range of factors relevant to its operation in the two languages under study and by attempting to relate the textual and interactional perspectives within a more comprehensive framework
