

SONET/SDH is being phased out

SONET technology is widely deployed, but

- SONET technology is aging
- SONET equipment is becoming obsolete and hard to find
- SONET is hard to maintain (parts hard to obtain and expensive)
- finding staff with SONET expertise is becoming ever more difficult
- no new rates/functionality/standards/applications are being developed for SONET

Modern packet-based networks (based on Ethernet, MPLS, and IP)

- are the present and future
- are broadband and becoming even more so
- are less expensive (both CAPEX and OPEX) and more flexible
- are being actively extended (e.g., migration to 61850)

But there are open questions

- can all the relevant services be migrated to packet (e.g., teleprotection, synchrophasors)?
- which packet-based network to choose?

Internet Tiered Services George N. Rouskas,2009-04-21 As telecommunications products and services have become an essential part of everyday life consumers have at the same time grown intimately familiar with the concept of tiered pricing that is associated with such services With tiered service structures users may select from a small set of tiers that offer progressively higher levels of service with a corresponding increase in price Tiered structures have been applied in several forms to wireless services e g characterized by the amount of voice minutes number of text messages or the size of one's circle of friends to whom voice calls are free Internet broadband access e g the access speed or volume of monthly transferred data and digital TV offerings e g the number of channels included among others Service tiering is a form of market segmentation which if applied appropriately benefits both providers and consumers by making available services and associated price points that reflect the diversity in consumers needs and ability to pay The purpose of this book is to develop a theoretical framework for reasoning about and pricing Internet tiered services as well as a practical algorithmic toolset

for network providers to develop customized menus of service offerings We provide a comprehensive study of the design sizing and pricing of tiered structures for internet services and we illustrate their potential in simplifying the operation of complex components such as packet schedulers

Cyber Security Markus Mack,2018-10-21 Cybersecurity refers to the measures taken to keep electronic information private and safe from damage or theft It is also used to make sure these devices and data are not misused Cybersecurity applies to both software and hardware as well as information on the Internet and can be

used to protect everything from personal information to complex government systems Cyber security is a distributed problem partly because of the distributed nature of the underlying infrastructure and partly because industries government and individuals all come at it with different perspectives Under these circumstances regulation is best attempted from the bottom up and legalisation especially in the area of criminal law should be sharply focused There is the need for distributed approaches instead of the more traditional single concentrated approach Cybersecurity is the body of technologies processes and practices designed to protect networks computers and data from attack damage and unauthorized access Cybersecurity training teaches professionals to spot vulnerabilities fend off attacks and immediately respond to emergencies The spread of modern information technologies has brought about considerable changes in the global environment ranging from the speed of economic transactions to the nature of social interactions to the management of military operations in both peacetime and war The development of information technology makes it possible for adversaries to attack each other in new ways and with new forms of damage and may create new targets for attack This book fully introduces the theory and practice of cyber security Comprehensive in scope it covers applied and practical elements theory and the reasons for the design of applications and security techniques It treats both the management and engineering issues of computer security
