Soviet And Russian Nuclear Submarines:

Decommissioned Russian Nuclear Submarines and International Cooperation Charles Krupnick, 2017-07-06 With the end of the Cold War Russia's submarines were no longer needed to deter or fight Western navies and were very expensive to operate and maintain. Older submarines were taken out of service in large numbers but without firm plans and infrastructure in place to remove and adequately care for their nuclear components, problems soon developed over the disposition of spent fuel assemblies. Problems arose also of course between Russia and the international community as to the best way to respond to the challenge. This book looks at those problems first discussing Russia's economy, its environment and the Russian Navy and then covering in detail the spent fuel of Russian submarines and related nuclear problems. The engagement of the international community on the issue is then addressed. A theoretical analysis is offered on how Russia's fellow nations can help remedy a troubling environmental problem in a difficult country. Russian Nuclear Submarines United States. Russian/Soviet Submarine Launched Ballistic Missiles: Nuclear Deterrence/Counter Force Strike Hugh Harkins, 2018-02-04 In 2017 the sea based element of the Russian Federation nuclear deterrent triad was well advanced in its modernisation with the introduction of Project 955 Borey Strategic Missile Carrier submarines armed with the RMS 56 Bulava submarine launched ballistic missile. The Project 955 Bulava was introduced as a replacement for the Project 677BDR Strategic Missile Carrier submarines armed with R 29RKU 1 2 ballistic missiles and the Project 667BDRM Strategic Missile Carrier submarines armed with R 29RMU1 2 2 1 ballistic missiles. The Project 677BDR was on the verge of retirement whilst the Project 667BDRM was set to serve in reducing numbers well into the third decade of the twenty first century and possibly beyond with an upper out of service date of 2030. The sole operational Project 941U Akula Heavy Ballistic Missile Submarine Cruiser remained in service in an operational trials role with no out of service date announced by the Ministry of Defence of the Russian Federation. The Russian Federation was the major successor state from the dissolution of the Soviet Union in December 1991. This latter state introduced the world's first submarine launched ballistic missile and submarine based ballistic missile platform to service in 1959 sowing the seeds for four plus generations of missile submarines in Soviet and latter Russian Federation service. It was not however until the introduction of the Project 667A armed from 1968 with R 27 ballistic missile that such submarine platforms began to be referred to as Strategic Missile Carriers. The Project 667A was the template for four more Strategic Missile Carrier designs: the Project 667B, BD, BDR, BDRM armed with increasingly capable intercontinental range ballistic missiles of the R 29, R, RK, RM series. These systems were from 1983 augmented by the Project 941 U Heavy Ballistic Missile Submarine Cruisers armed with the R 39 U, the largest and most powerful ballistic missile ever fielded on a submarine launch platform. This volume sets out to document the four generations of Soviet and later Russian

Federation submarine launched ballistic missiles carried on the four generations of conventional and nuclear powered ballistic missiles submarines that have served the Soviet and Russian Federation Northern and Pacific fleets since 1959 All technical and historical information has been furnished by the respective design bureaus manufacturers and the Ministry of Defence of the Russian Federation with additional input from western intelligence agencies **The Submariner's**

historian Edward Hampshire reveals the fascinating history of the nuclear powered attack submarines built and operated by the Soviet Union in the Cold War including each class of these formidable craft as they developed throughout the Cold War period The November class which were the Soviet Union's first nuclear submarines had originally been designed to fire a single enormous nuclear tipped torpedo but were eventually completed as boats firing standard torpedoes The Alfa class were perhaps the most remarkable submarines of the Cold War titanium hulled which was light and strong but extremely expensive and difficult to weld successfully crewed with only thirty men due to considerable automation and 30% faster than any US submarines they used a radical liquid lead bismuth alloy in the reactor plant The Victor class formed the backbone of the Soviet nuclear submarine fleet in the 1970s and 1980s as hunter killer submarines began to focus on tracking and potentially destroying NATO ballistic missile submarines The Sierra classes were further titanium hulled submarines and the single Mike class submarine was an experimental type containing a number of innovations Finally the Akula class were being constructed as the Cold War ended and these boats form the mainstay of the Russian nuclear attack submarine fleet today This book explores the design development and deployment of each of these classes in detail offering an unparalleled insight into the submarines which served the Soviet Union throughout the Cold War period The text is supported by stunning illustrations photographs and diagrams of the submarines *Bulletin of the Atomic Scientists*, 1993-04 The Bulletin of the
