Suicide Closing The Exits:

Suicide Ronald V. Clarke, 2017-07-12 Suicide prevention is a major goal of the Public Health Service of the US government This has been the case since the 1960s when the National Institute of Mental Health established a center for the study and prevention of suicide Since then however the knowledge and research gathered has not bought about the reduction of suicide Suicide Closing the Exits was written to change this trend This book reports a program of research concerned with preventing suicide by restricting access to lethal agents such as guns drugs and carbon monoxide It may seem implausible that deeply unhappy people could be prevented from killing themselves by closing the exits but the idea is not a new one and has been discussed widely in the literature The authors argue that restricting access to lethal agents should be considered a major preventive strategy along with the psychiatric treatment of depressed and suicidal individuals and the establishment of suicide prevention centers to counsel those in crisis Suicide represents a major contribution to the literature As such it should be read by all medical practitioners policy makers and psychologists **Suicide** Ronald V. Clarke, 2017-09-20 Suicide prevention is a major goal of the Public Health Service of the US government This has been the case since the 1960s when the National Institute of Mental Health established a center for the study and prevention of suicide Since then however the knowledge and research gathered has not bought about the reduction of suicide Suicide Closing the Exits was written to change this trend This book reports a program of research concerned with preventing suicide by restricting access to lethal agents such as guns drugs and carbon monoxide It may seem implausible that deeply unhappy people could be prevented from killing themselves by closing the exits but the idea is not a new one and has been discussed widely in the literature The authors argue that restricting access to lethal agents should be considered a major preventive strategy along with the psychiatric treatment of depressed and suicidal individuals and the establishment of suicide prevention centers to counsel those in crisis Suicide represents a major contribution to the literature As such it should be read by all medical practitioners policy makers and psychologists **Suicide: Closing the Exits** Ronald V. Clarke, David Lester, This book reports a program of research concerned with the possibility of as guns drugs preventing suicide by restricting access to lethal agents such and carbon monoxide To many people it may seem implausible that deeply unhappy people could be prevented from killing themselves by closing the exits but the suggestion is by no means a new one and has been current in the journals for some time This book is the first major exposition of the idea however with the evidence collected in one place and an examination of the implications for understanding the suicidal person and for preventing suicide We hope to convince public health officials that although the idea is largely disregarded at present restricting access to lethal agents should take its place as a major preventive strategy along with the psychiatric treatment of depressed and suicidal individuals and the establishment of suicide pre in communities to counsel those who are suicidal or in crisis vention centers We came to this position by two different routes R c s interest derived from a concern with the role

of opportunity in crime This originated in his doctoral research dealing not with suicide but with another form of escape absconding from training schools for young offenders He found that the variance in absconding was explained more by the opportunities to abscond presented by the school s environment and regime than by the offender s history or personality

Gunn,David Lester,2015-06-01 Some researchers in the field of suicidology think that the old theories of suicide are too constraining and impede advances in the understanding of suicide However the book s authors are not quite so critical of past theories In the book they review the classic theories of suicide both psychological and sociological because they are the foundation of our current theories and also propose the skeletons of possible future theories The goal of the text is to present researchers with theories to guide their research encourage them to modify these theories perhaps meld them together in some cases and think how they might propose new theories Presented in three sections the first reviews significant psychological theories including Suicide as Escape Interpersonal Psychological theory The Role of Defeat and Entrapment in Suicidal Behavior Suicide Ethology and Sociobiology Stress Diatheses Cognitive Theories Learning Perspective on Suicide Theories of Personality and Suicide Typological Theories and the Pathophysiology of Suicide The second section of the text addresses Sociological and Economic Theories including Suicide as Deviance Naroll s Thwarting Disorientation Theory three classic sociological theories as well as several minor theories A comprehensive chapter on economic theories is offered by Bijou Yang The final section concentrates on Critical Thoughts About Theories of Suicide a new and growing influence in academia and scholarship Suicide as a Dramatic Performance David Lester,Steven Stack,2015-09-30 Each suicide is as unique as the individuals involved especially if one examines the nature of the act and to what extent these acts can be viewed as a theatrical performance Focusing on the dramatic aspects of suicide may seem tangential to the physical and mental pain experienced by those who try to kill themselves but dramatic aspects often provide important clues for understanding the mental state of suicidal individuals David Lester and Steven Stack investigate what happens in the weeks days and hours before a suicide when the suicidal individual must make decisions and formulate the script for his or her suicidal act The editors argue that these choices may help us understand and prevent other suicides and stimulate new and innovative research in this important area Through twenty five substantive chapters including both quantitative and qualitative analyses this book offers insights into suicide as a dramatic act with chapters on the intended audience the suicide note the location and method chosen and cultural scripts including suicide by cop sati seppuku and duels The contributors to this volume argue that psychological social and cultural factors influence these choices and that the decisions made by the individual are important for understanding the mental

Suicide Risk Assessment and Prevention Maurizio Pompili, 2022-12-19 This book explores suicide prevention perspectives from around the world considering both professionals' points of view as well as first person accounts from suicidal individuals. Scholars around the globe have puzzled over what makes a person suicidal and what is in the minds of those individuals who die by suicide. Most often the focus is not on the motives for suicide nor on the phenomenology of this act but on what is found from small cohorts of suicidal individuals. This book offers a tentative synthesis of a complex phenomenon and sheds some light on models of suicide that are less frequently encountered in the literature. Written by international experts it makes a valuable contribution to the field of suicidology that appeals to a wide readership from mental health professionals to researchers in suicidology and students.

Considers suicide from epidemiological, psychological, clinical, sociological and neurobiological perspectives providing a holistic understanding of the subject. Describes the most up to date evidence based research and practice from across the globe and explores its implications across countries, cultures and the lifespan.

Hales, 2012 This new edition of Textbook of Suicide Assessment and Management follows the natural sequence of events in evaluating and treating patients: assessment, major mental disorders, treatment, treatment settings, special populations, special topics, prevention and the aftermath of suicide.
