biochemical function. The authors suggest that the observed effects of the treatment on the expression of the *hsp70* gene may be due to the fact that the treatment induces a stress response in the cells, which in turn leads to the activation of the *hsp70* gene. This is supported by the fact that the treatment also induces the expression of other stress-related genes, such as *hsp90* and *hsp27*. The authors conclude that the treatment induces a stress response in the cells, which in turn leads to the activation of the *hsp70* gene.

These results suggest that the use of the *in vitro* model system is a useful tool for studying the effects of various factors on the development of the embryo. The results also suggest that the use of the *in vitro* model system is a useful tool for studying the effects of various factors on the development of the embryo.

Abstract: **INTRODUCTION:** The purpose of this study was to determine the effect of a 12-week training program on the physical fitness and health-related quality of life of sedentary, middle-aged, overweight women. **METHODS:** Twenty-four sedentary, middle-aged, overweight women participated in a 12-week training program consisting of three sessions of cardiovascular and strength training per week. **RESULTS:** After 12 weeks, there was a significant improvement in cardiovascular fitness, muscle strength, and health-related quality of life. **CONCLUSIONS:** A 12-week training program can improve the physical fitness and health-related quality of life of sedentary, middle-aged, overweight women.
